Austin, Texas

contract

HYBRIDENTRY LEVEL

Job Summary

The AI Builder designs and builds internal software utilizing AI to simplify, automate, and scale workflows across the organization. Responsibilities include owning the end-to-end lifecycle of internal tools, designing AI-enabled systems, modernizing technical debt, collaborating with various departments to identify friction points, managing stakeholders, and driving adoption through training materials. Required skills include expertise in AI-augmented development, modern tooling, data and systems architecture, and excellent communication and collaboration abilities. The ideal candidate is a pragmatic builder with experience in software engineering and a strong ability to convey technical concepts to non-technical stakeholders.

Required Qualifications

- Proven expertise using AI-native IDEs (e.g., Cursor, Windsurf, Claude Code) and LLMs to accelerate development
- Deep familiarity with RESTful APIs, Git, CI/CD pipelines, and Agile methodologies
- Ability to translate exploratory work from JupyterLab or ad-hoc scripts into maintainable, production-ready software

•Solid understanding of SQL/NoSQL databases, data modeling, and structured data management
•Ability to design for cloud environments while maintaining a strong foundation in software engineering principles
•Skill in evaluating where AI provides genuine leverage versus traditional software solutions
•A 'progress over perfection' mindset, with the ability to identify patterns, evaluate trade-offs, and prioritize high-impact solutions
•Comfortable navigating messy, real-world business processes and technical challenges in a fast-paced environment
•Strong troubleshooting skills with the ability to reason through complex system failures
•Exceptional communication skills, with the ability to explain technical concepts to non-technical stakeholders clearly
•Experience working in fast-moving teams with iterative feedback and flexibility

Desired Qualifications

•Degree in Computer Science, Engineering, or equivalent practical experience
•Experience building internal platforms or operational tooling
•Experience in Node.js, with a track record of building internal tools, services, and robust automations
•Experience in Python and SQL; comfortable building tools, services and automations
•Familiarity with workflow orchestration, job scheduling, or data pipelines
•Exposure to containerization (Docker) and cloud-native tooling
•Prior experience working directly with operations or business teams

Additional Requirements

•For candidates in California, Colorado, New York City, Illinois, Minnesota, New Jersey, Vermont and Massachusetts the Targeted Base Salary Range for this role is $90,000 - $100,000
