Neel Gali

Senior Data Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Summary

Senior Data Engineer with 6+ years building enterprise-scale **ETL/ELT pipelines**, **cloud data platforms**, and **data warehouse** solutions on **Azure Databricks**, **Snowflake**, **PySpark**, and **Delta Lake**, delivering governed, high-reliability data infrastructure for 15+ enterprise clients across compliance, financial, and scientific domains.

Professional Experience

Senior Data Engineer *Jul 2025 - Present*

Epik Solutions | Enterprise Security Data Platform

- Architected **Azure Databricks** medallion lakehouse (Bronze/Silver/Gold) using **Delta Live Tables** and **PySpark**, ingesting 50M+ daily security events with schema enforcement and full lineage tracking via **Unity Catalog**.
- Built **Snowflake** data warehouse models with **dbt** for enterprise security analytics, applying incremental materializations, clustering keys, and Snowpipe auto-ingest to reduce query latency by 45% downstream.
- Designed **Azure Event Hubs** streaming ingestion pipelines feeding **Databricks Structured Streaming** jobs into Delta Lake, achieving sub-5-minute data freshness SLA for real-time security alerting workflows.
- Provisioned end-to-end data infrastructure on **Azure** (ADLS Gen2, Databricks, Event Hubs, Key Vault) using **Terraform** IaC, reducing environment setup time from days to under 2 hours via **Azure DevOps** CI/CD.
- Implemented **Dagster**-orchestrated pipeline monitoring with **Great Expectations (GX)** data quality checks across all medallion layers, catching schema drift and anomalies before they reached production analytics layers.
- Led data modeling reviews and pipeline design sessions across a 5-engineer team, establishing dbt style guides and Delta Lake partitioning standards adopted as team-wide conventions.

Data Engineer *Jul 2022 - Jun 2025*

Samay Systems LLC | Financial Compliance SaaS Platform

- Built **Azure Data Factory** ELT pipelines ingesting structured and semi-structured data from 10+ REST APIs and flat-file sources into **ADLS Gen2**, processing 10K+ compliance records daily across 15+ enterprise tenants.
- Migrated on-premise **SQL Server** compliance warehouse to **Snowflake**, designing star-schema dimensional models and orchestrating historical loads via **Dagster** asset pipelines, reducing analyst query latency 60%.
- Adopted **Azure Databricks** and **Delta Lake** to replace brittle ADF transformation logic, building PySpark-based ELT jobs with idempotent writes, watermarking, and schema evolution handling across all compliance datasets.
- Developed **Power BI** dashboards with **DAX** measures for compliance KPI reporting, connecting to **Snowflake** via DirectQuery to deliver real-time financial insights for 15+ enterprise tenants.
- Implemented **dbt** transformation layer over Snowflake with modular SQL models, tests, and documentation, reducing ad hoc analyst SQL requests by 40% and improving data discoverability across the B2B platform.
- Enforced data governance using **Unity Catalog** RBAC policies, column-level security, and audit lineage across Databricks workspaces, achieving compliance with enterprise data access control requirements for 15+ clients.
- Provisioned **Azure** data infrastructure (ADLS Gen2, ADF, Databricks, Synapse) with **Terraform** and **Azure DevOps** CI/CD pipelines, reducing manual deployment errors by 40% across multi-tenant environments.

Associate Data Engineer *Jul 2020 - Aug 2022*

Zemoso Technologies | LabOps Platform

- Built **Python** ETL pipelines with **Pandas** and **PySpark** to ingest, clean, and transform scientific experiment datasets from lab instruments and REST APIs into a **PostgreSQL** analytical database for 500+ scientists.
- Designed normalized **PostgreSQL** schemas and optimized SQL queries for LabOps experiment tracking workflows, improving data retrieval performance by 30% and data integrity across 500+ experiment datasets.
- Orchestrated batch data workflows using **Apache Airflow** DAGs with retry logic, SLA alerting, and dependency management, reducing manual pipeline intervention by 35% across 10+ lab data products.
- Built **AWS Lambda** and **S3**-event-triggered ingestion jobs for automated raw data landing and archival, reducing manual upload overhead by 40% and maintaining consistent raw data availability for downstream pipelines.
- Delivered full-stack experiment tracking features integrating **React.js** front-ends with **Spring Boot** REST APIs and **PostgreSQL**, providing accurate data entry and retrieval across 10+ regulated scientific workflows.

Skills

Programming Languages: Python, SQL (Spark SQL, T-SQL), Bash, Scala (basic)
Data Platforms: Azure Databricks, Snowflake, Azure Synapse Analytics, Delta Lake, Delta Live Tables (DLT)
ETL/ELT & Orchestration: PySpark, Azure Data Factory (ADF), Dagster, Apache Airflow, Databricks Workflows, dbt
Storage & Modeling: ADLS Gen2, Delta Tables, Snowflake (Snowpipe, Streams & Tasks), SQL Server, PostgreSQL
Cloud & DevOps: Azure (ADLS Gen2, ADF, Databricks, Event Hubs, Key Vault), AWS (S3, Lambda), Terraform, Azure DevOps, GitHub Actions, Docker, Azure Event Hubs, Databricks Structured Streaming
Tools & Methodologies: Power BI, DAX, Git, JIRA, Agile/Scrum, Medallion Architecture, Dimensional Modeling

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
