Neel Gali

Full Stack Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Full Stack Software Engineer with 3 years of backend or full-stack software development experience, proficient in general-purpose programming languages like Python, JavaScript, and TypeScript. Demonstrated expertise in building and interacting with REST APIs, front-end frameworks such as React.JS, and relational (SQL) databases. Proven ability in architecting and developing large-scale systems, leveraging cloud technologies (AWS, Azure, Docker, Kubernetes) within an Agile environment.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL

Web Technologies: React.JS, Node.js, Express.js, HTML5, CSS3, REST APIs

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, CI/CD, Git, GitHub Actions, Terraform

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB

Software Engineering: Microservices Architecture, API Design, Performance Tuning, Agile Methodologies

PROFESSIONAL EXPERIENCE

Software Engineer | Epik Solutions

Jun 2025 - Present

• Led full-stack software development, architecting and implementing backend services using Python and TypeScript with React.JS front-ends, to enhance cybersecurity compliance workflows for security analysts; achieved a 30% improvement in threat detection accuracy and reduced manual incident response time by 25%.

• Designed and implemented scalable REST APIs using Python, integrated with PostgreSQL relational (SQL) databases, to provide internal security teams with real-time data access for critical analytics; improved reporting efficiency by 40% and accelerated decision-making.

• Architected and implemented custom full-stack workflow automation tools, leveraging React.JS, Azure cloud technologies, and a microservices architecture, to streamline critical business processes; resulted in a 35% increase in operational efficiency across departments.

• Developed automated KPI and performance dashboards, transforming raw datasets into decision-ready insights using strong software engineering skills, aligned with executive and investment-risk stakeholders; facilitated data-driven strategic planning and risk mitigation.

• Enhanced data processing pipelines for complex security datasets by applying advanced analytical techniques and Python scripting, ensuring deterministic outputs for compliance; accelerated exploratory data analysis and summarization, reducing data preparation time by 20%.

Full Stack Software Engineer | Samay Systems LLC

July 2024 - Jun 2025

• Designed and built interactive compliance dashboards and control validation views using React.JS for the front-end, integrated with robust backend services; improved audit readiness by 30% and enhanced user experience for compliance stakeholders.

• Developed modular backend services supporting multi-tenant compliance validation across multiple frameworks, enforcing strict tenant isolation at the schema and query layer using Python and relational (SQL) databases; ensured data security and scalability for over 10 enterprise clients.

• Built Python services that collect, validate, and summarize evidence data from AWS, Azure, GitHub, and Jira APIs, creating consistent inputs for downstream workflows; reduced manual data collection efforts by 60% and significantly improved data integrity.

• Implemented advanced compliance data processing workflows, combining structured enterprise data with business logic using Python; provided automated insights for audit teams, accelerating evidence review by 20% while maintaining accuracy.

• Designed and implemented efficient data retrieval systems using vector databases, enabling natural-language querying over historical compliance data; enhanced customer self-service capabilities and reduced support tickets by 15% through contextual answers.

• Designed complex relational schemas and SQL workflows to support multi-tenant, multi-framework compliance validation at scale; optimized data storage and retrieval, improving system performance by 25%.

• Deployed and managed services using AWS cloud-native infrastructure, Docker, Kubernetes, and CI/CD pipelines, ensuring reliability across multiple production environments; achieved 99.9% uptime and streamlined deployment processes.

Software Development Engineer Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Supported development of data processing and integration pipelines for semi-autonomous agricultural vehicles operating in real-world environments, primarily using Python; improved data reliability for downstream systems by ensuring robust data ingestion.

• Built Python-based preprocessing pipelines to transform raw sensor and image data into training-ready datasets for detection and prediction tasks; reduced data preparation time by 30% for internal ML engineering teams.

• Implemented and validated perception models using PyTorch, TensorFlow, and OpenCV within the vehicle's software stack to support autonomous perception and prediction use cases; ensured outputs met operational constraints, enhancing system safety and reliability.

• Implemented UI enhancements and backend integrations to improve usability and reliability of internal engineering tools; enhanced developer productivity by 15% and reduced tool-related bug reports by 10%.

• Deployed models to cloud-hosted production environments, gaining hands-on experience with performance monitoring and inference validation for autonomous systems; ensured stable operation and continuous improvement of deployed software.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to the full-stack development of a cloud-based scientific operations platform, focusing on experiment, sample, and data traceability from project inception to analysis; improved data integrity and auditability across research workflows.

• Collaborated with scientists and operators to translate domain-specific workflows into structured backend APIs and intuitive UI components using JavaScript; enhanced user adoption by 20% and significantly reduced manual data entry errors.

• Designed and implemented database migration files to create and manage batch tables, ensuring schema consistency across environments for relational (SQL) databases; minimized downtime during database updates and ensured data compatibility for system evolution.

• Supported Proof-of-Concept data experimentation workflows by automating dataset preparation, feature generation, and experiment tracking using Python scripting; accelerated experimentation cycles by 25% and improved data governance for scientific research.

• Integrated CI/CD pipelines to validate code, enforce quality checks, and promote artifacts, maintaining auditability and security controls aligned with governance standards; reduced deployment errors by 40% and significantly improved release velocity.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
