San Francisco, CA

Summary

Software Engineer with early-career experience building **consumer-facing, high-traffic backend systems** and interactive features used in real-time environments. Strong foundation in **algorithms, data structures, and scalable system design**, with hands-on experience developing reliable services that support millions of events and users. Collaborative engineer who translates user feedback and product requirements into performant, maintainable software.

Technical Skills

Languages: Java, Python, Go (familiar), JavaScript
Core CS: Data Structures, Algorithms, Object-Oriented Design, Schema Design
Backend Systems: Distributed services, REST APIs, concurrency, caching
Frontend: Modern web fundamentals, interactive UI components
Cloud & Infra: AWS (EC2, S3, IAM), CI/CD pipelines
Databases: SQL (PostgreSQL, MySQL), NoSQL (DynamoDB)
Reliability: Logging, monitoring, debugging, incident response
Messaging & Notifications: Event-driven systems, asynchronous processing

---

Professional Experience

Epik Solutions
Software Engineer II
June 2025 – Present

- Built and operated **low-latency backend services** that process high volumes of real-time events, enabling interactive user-facing features with strict performance requirements.
- Designed **scalable data aggregation and service APIs** to handle millions of concurrent requests while maintaining consistent response times.
- Applied strong **data structures and algorithmic reasoning** to optimize hot paths in latency-sensitive systems.
- Partnered with product teams to convert user behavior and feedback into new features that improved engagement and repeat usage.
- Improved system reliability by adding health checks, automated tests, and defensive coding patterns to production services.
- Collaborated across teams through code reviews, design discussions, and iterative delivery.

Samay Systems LLC
Software Engineer I
July 2024 – June 2025

- Developed **consumer-facing backend services** supporting dashboards and interactive product features.

- Implemented **incremental computation and caching strategies** to improve responsiveness under load.
- Designed clean data schemas and APIs to support evolving product requirements without breaking existing consumers.
- Diagnosed and resolved production issues by analyzing logs, metrics, and execution traces.
- Contributed to code reviews and testing practices to maintain quality and long-term maintainability.

Monarch Tractor
Software Development Engineer Intern
June 2023 – August 2023

- Built backend automation services to support internal workflows used daily by employees.
- Integrated third-party APIs into production systems with proper error handling and retry logic.
- Designed background jobs and notifications to ensure reliability and correctness of automated processes.
- Gained experience debugging live systems and improving observability through structured logging.

ZeMoSo Technologies
Associate Software Engineer
July 2021 – August 2022

- Developed backend APIs and services supporting high-volume application workflows.
- Built data-backed features requiring efficient querying and predictable performance.
- Collaborated with frontend engineers to ensure backend systems enabled responsive, accessible user experiences.
- Participated in on-call rotations and post-incident reviews to strengthen system reliability.

Projects

High-Performance Event Aggregation Service

- Designed a multithreaded service to process large volumes of events efficiently, reducing end-to-end processing time and supporting real-time analytics.

Interactive Analytics & Monitoring Platform

- Built backend services to collect and serve structured data to interactive dashboards with low-latency access patterns.

Education

Master of Science in Computer Science
Oklahoma State University

Bachelor of Technology in Computer Science
JNTU Hyderabad
