Skills

Languages: Python, Ruby, Java, C++, JavaScript, HTML, CSS, RPG II, RPG III, CL, Synon, SQL
Frameworks: TensorFlow, React, Ruby on Rails, SpringBoot, Node
Cloud: AWS, GCP, Azure
Tools: Docker, Kubernetes, Redis, Git, Jira
Methodologies and Practices: Agile, SDLC, MVC, REST, Maven, TDD, UML

Experience

Software Developer Intern, Monarch Tractor – Livermore, CA Jun 2023 – Aug 2023

- Implemented an automated employee management system for an Ag Tech startup, decreasing HR manual tasks by 40% and saving roughly 150 hours per month as an independent intern
- Utilized Microsoft Office tools to handle and analyze large employee data across different platforms
- Streamlined data exchange across APIs for user management, device provisioning, user group administration, licensing, cron job execution using Python scripts and serverless AWS services
- Configured CI/CD pipelines with security best practices, including secure credential management, detailed logging, vulnerability scanning, and rollback mechanisms

Full Stack Developer, ZeMoSo Technologies – Hyderabad, India Aug 2021 – Aug 2022

- Created 30+ UI components, refactored microservices, and crafted test cases for a scientific experiment tracking platform in a service-based startup, working with cross functional teams in React and Ruby on Rails
- Improved user interface elements, driving a 10% improvement in design consistency by integrating new UI components into the custom library and replacing subsequent legacy implementations
- Developed and integrated new features for user roles and permissions management
- Resolved issues with non-persisting data in edit forms, reducing error reports by 5% by ensuring backend updates, maintaining UI consistency, and adding tests
- Conducted unit tests to validate individual components and integration tests to verify the interoperability of different system modules

AS/400 Mainframe Intern Oklahoma State University – Stillwater, OK Jan 2021 – Jun 2021

- Contributed to the design and enhancement of ERP systems on the AS400, utilizing Synon for code generation and ensuring alignment with business requirements
- Developed and maintained applications on the AS400 platform using RPG, RPGLE, CLL and Synon to create robust and efficient solutions
- Focused on maintaining, troubleshooting, and optimizing existing AS/400 applications, ensuring long-term stability and performance of critical business processes
- Developed a deep understanding of the AS400 mainframe architecture, including system operations, database management, job scheduling and worked on projects to gain insights

Projects

Virtual Incubation Centre VIC Github

- Designed a platform for entrepreneurs, mentors, and investors, enabling project registration, mentorship requests, and investment opportunities using Spring Boot, Spring MVC, and Spring Data JPA
- Built personalized user dashboards for managing project progress, mentorship feedback, and investment interactions for seamless user experience and efficient admin managements

Related Coursework

Explainable AI – MS in Computer Science at Oklahoma State Jan 2023

- Completed coursework in Explainable AI, mastering techniques like LIME and SHAP for model interpretability and exploring advanced topics like uncertainty estimation and causal inference in GNNs

Education

Oklahoma State University – MS in Computer Science May 2024
Jawaharlal Nehru Technological University Hyderabad – BS in Computer Science Jul 2021
