NEEL GALI

Automation Engineer | DevOps | Cloud & AI-Driven Workflows

(475)- 291- 1455 **neelgali7@gmail.com**

Summary

Automation Engineer with 1.5 years of experience designing cloud-native infrastructure, setting up DevOps pipelines, and building intelligent automation using Python, YAML, and AI workflows. Hands-on with CI/CD practices, IaC, and agentic AI systems using tools like GitLab, Terraform, Ansible, and n8n. Skilled at orchestrating scalable workflows across AWS and Azure, driving automation-first culture.

Skills

Languages & Scripting: Python, Bash, YAML
DevOps & CI/CD: GitLab CI/CD, Azure DevOps, Docker, Shell scripting, Ansible
Infrastructure Automation: Terraform, Ansible, AWS Lambda, EventBridge
Cloud Platforms: AWS (EC2, Lambda, IAM, S3, Step Functions), Azure AD, Logic Apps
AI & Workflow Automation: n8n, OpenAI APIs, Agentic AI workflows, LangChain (intro)
Monitoring & Testing: CloudWatch, Prometheus, Grafana, Postman, Selenium
Security & Identity: IAM, OAuth2.0, Microsoft Graph API, RBAC
Databases: PostgreSQL, MySQL, MongoDB
Soft Skills: Problem Solving, Time Management, Adaptability, Attention to detail, Strong Communication Skills, Team Collaboration

Education

Master of Science in Computer Science | Oklahoma State University, Oklahoma **May 2024**

Bachelor of Science in Computer Science | Jawaharlal Nehru Technological University, India **June 2021**

Work Experience

Samay Systems LLC **Feb 2024 - Current**
Automation Engineer

- Developed Python automation scripts to pull evidence and activity data from AWS and Azure logs.
- Designed robust CI/CD pipelines using GitLab with linting, test coverage, and deployment stages.
- Built agentic workflows in n8n combining OpenAI-powered logic for compliance actions and decision summaries.
- Leveraged AWS Lambda, EventBridge, and Step Functions for scheduled and on-demand backend tasks.
- Set up Prometheus exporters to collect infrastructure and application metrics; configured alerts for CPU, memory, and latency.
- Integrated Slack for alerts and Microsoft Graph API for automated access provisioning.
- Used Terraform for managing IAM roles, security policies, and infrastructure provisioning as code.
- Embedded automated security checks and compliance validators into GitLab pipelines.

Monarch Tractor **Jun 2023 - Aug 2023**
Automation Engineer Intern

- Created backend services in Python to synchronize user lifecycle data across HR, identity, and internal systems.
- Designed GitLab pipelines for CI/CD of microservices across development and staging environments.
- Built serverless workflows using AWS Lambda, S3, CloudWatch, and EventBridge for automation.
- Developed YAML-based reusable templates for onboarding and role assignments.
- Integrated APIs (Slack, IDP, internal tools) for automated access management workflows.

ZeMoSo Technologies **Jul 2021 - Aug 2022**
Automation Developer

- Built automation workflows and backend scripts in Python to streamline lab operations for a biotech client, reducing manual interventions and enhancing accuracy.
- Integrated RESTful APIs with OAuth2 for secure access and role-based control of lab tasks and experiment pipelines.
- Developed reusable workflow automations using n8n for scheduling, orchestration, and CRM synchronization, simplifying experiment management.
- Designed automated approval flows and experiment-availability checks, reducing turnaround time significantly.
