Neel Gali

Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of experience delivering robust, consumer-facing products at scale in a professional environment. Proficient in Golang, Typescript, and React, with deep expertise in AWS technologies including ECS, DynamoDB, and Lambda. Proven ability applying algorithms, data structures, and schema design to build efficient and scalable software and services.

TECHNICAL SKILLS

Programming Languages & Frameworks: Golang, Typescript, React, JavaScript, Python, Node.js, Express.js, RESTful APIs, modern languages and frameworks

Cloud Technologies: AWS technologies, ECS, DynamoDB, Lambda, SQS, Step Functions, Docker, Kubernetes, CI/CD

Database & Data Management: SQL, PostgreSQL, MongoDB, data modeling, schema design, NoSQL

Core Engineering: algorithms, data structures, Microservices, System Design, Unit Testing, Integration Testing

PROFESSIONAL EXPERIENCE

Automation Engineer | Epik Solutions

Jun 2025 - Present

• Architected and developed a new microservices platform using Golang and Typescript to enhance business process automation, integrating with existing cybersecurity systems; improved data processing efficiency by 35% for security analysts, contributing to a more responsive professional environment.

• Designed and implemented scalable backend services utilizing AWS technologies including ECS and Lambda functions, processing high-volume data streams for real-time threat intelligence; reduced latency by 20% and supported the delivery of consumer-facing products at scale.

• Engineered robust data pipelines and APIs with modern languages and frameworks to collect, transform, and store critical security datasets in DynamoDB, ensuring data integrity and availability; optimized query performance by 40% through effective schema design for downstream analytics.

• Developed interactive user interfaces using React and Typescript for custom workflow automation tools, providing a seamless experience for internal security teams; enhanced user adoption by 50% and streamlined critical incident response workflows.

• Implemented asynchronous message queues using SQS for inter-service communication and event-driven architectures, improving system resilience and reducing message processing errors by 15% across distributed services.

• Utilized Step Functions to orchestrate complex, multi-stage data processing and automation workflows, ensuring reliable execution and error handling; decreased operational overhead by 25% and facilitated rapid deployment of new features.

• Collaborated with cross-functional teams to define technical requirements and system architecture, applying algorithms and data structures principles to solve complex scaling challenges, resulting in a 10% reduction in infrastructure costs for consumer-facing products.

Fullstack AI Engineer | Samay Systems LLC

July 2024 - Jun 2025

• Led the development of consumer-facing products at scale, building compliance dashboards and control validation views using React and Typescript; improved audit preparation time by 30% for enterprise clients.

• Designed and built modular backend services using Golang to support multi-tenant compliance validation, enforcing strict tenant isolation with optimized schema design for PostgreSQL; ensured data security and scalability for 100+ active clients.

• Developed data ingestion services leveraging AWS technologies such as Lambda and SQS to collect and validate evidence from various APIs (AWS, Azure, GitHub, Jira); processed over 1TB of data monthly, providing

consistent inputs for reporting.

• Implemented robust data models and SQL workflows to support complex multi-tenant, multi-framework compliance validation, applying advanced algorithms for data correlation and integrity checks; reduced data discrepancies by 20%.

• Deployed and managed services using AWS technologies including ECS and Docker, orchestrating CI/CD pipelines to ensure high reliability and availability across multiple production environments; achieved 99.9% uptime.

• Collaborated closely with product managers and stakeholders to translate business requirements into technical specifications, utilizing data structures and data modeling best practices to deliver features efficiently within an agile professional environment.

SDE Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Contributed to the development of software solutions for semi-autonomous agricultural vehicles, gaining experience in a professional environment focused on high-reliability systems.

• Built Python-based data preprocessing pipelines, applying fundamental algorithms and data structures to transform raw sensor data into training-ready datasets; improved data preparation efficiency by 25%.

• Implemented UI enhancements and backend integrations for internal tools using Typescript and React, improving usability and reliability for engineering teams.

• Deployed software components to cloud-hosted environments, gaining hands-on experience with AWS technologies for monitoring and validation of system performance.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to a cloud-based scientific operations platform, developing backend APIs and intuitive UI components using modern languages and frameworks to streamline experiment and sample tracing.

• Designed and implemented database migration files for PostgreSQL, focusing on schema design and data modeling to manage batch tables and ensure consistency across development and production environments.

• Supported the integration of CI/CD pipelines for automated testing and deployment of software artifacts, enhancing code quality and reducing deployment time by 15% in a professional environment.

• Collaborated with scientists and operators to translate domain-specific workflows into technical requirements, contributing to the development of robust and scalable software solutions.

EDUCATION

Master’s in Computer Science | Oklahoma State University

Bachelor’s in Computer Science | JNTU Hyderabad
