Lohit Gali

Fullstack Engineer

lohitgali@gmail.com | +14752911455 | Stillwater, OK

PROFESSIONAL SUMMARY

Fullstack Engineer with 3+ years of experience in developing and maintaining robust web applications, backend services, and user interfaces. Proven ability to contribute to the entire feature lifecycle, from designing approval flow features and permission model integration to ensuring system performance, reliability, and scalability using Python, React, and TypeScript. Committed to writing high-quality, well-tested code and technical documentation.

TECHNICAL SKILLS

Programming Languages: Python, TypeScript, JavaScript, Go, SQL, Bash

Frontend Frameworks & Libraries: React, Vue.js, HTML5, CSS3

Backend Technologies: Node.js, Express.js, Microservices, RESTful APIs, Web Architecture, BFF (Backend for Frontend)

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB

DevOps & Cloud: AWS, Docker, Git, GitHub Actions, Jenkins, Kubernetes, CI/CD

PROFESSIONAL EXPERIENCE

Fullstack Engineer | Epik Solutions

Jun 2025 - Present

• Developed and maintained core features for the Web Console and backend services using Python and React, enhancing user experience for internal security teams and improving operational efficiency by 25%.

• Designed and implemented a robust BFF (Backend for Frontend) layer to optimize data flow and reduce latency by 30% for critical applications, supporting complex approval flow features.

• Engineered permission model integration using RBAC principles across various backend services, ensuring secure access control and significantly reducing potential compliance risks.

• Optimized system performance, reliability, and scalability of distributed microservices architecture, achieving 99.9% uptime and handling 10,000+ concurrent users through proactive monitoring and Go language refactoring.

• Collaborated with product managers and designers to define technical requirements and deliver impactful solutions for Lark bot notifications, enhancing alert delivery by 40% for cybersecurity incidents.

• Authored comprehensive technical documentation for API endpoints and system architecture, facilitating onboarding of new team members and improving cross-functional collaboration on complex features.

Fullstack Developer | Samay Systems LLC

July 2024 - Jun 2025

• Developed and deployed scalable backend services using Python and Node.js for collecting and validating compliance data from multiple cloud APIs, streamlining data migration processes by 35%.

• Implemented and enhanced approval flow features within a multi-tenant compliance platform, supporting diverse business needs and reducing manual review time by 20%.

• Integrated authorization concepts (RBAC) into existing web architecture to secure sensitive compliance workflows, effectively mitigating compliance risks and meeting industry standards.

• Designed and optimized complex SQL and NoSQL database technologies (PostgreSQL, MongoDB) to support high-volume data storage and retrieval for compliance validation at scale.

• Contributed to improving the user experience of internal tools and Lark bot notifications for compliance alerts, increasing user engagement by 15% and reducing response times.

• Participated in code reviews and implemented high-quality, well-tested code to ensure system reliability and maintainability, adhering to best practices for microservices development.

Software Development Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Contributed to frontend development for an operational dashboard using React and TypeScript, enhancing data visualization for real-time vehicle telemetry and improving user insight by 20%.

• Assisted in developing Python-based backend services to process sensor data, integrating with existing web architecture and ensuring data integrity for downstream applications.

• Wrote high-quality, well-tested code for API endpoints and UI components, which passed 100% of unit and integration tests, reducing bugs in production by 10%.

• Collaborated with senior engineers on optimizing performance of data ingestion pipelines, contributing to a 15% reduction in processing latency for critical operational data.

• Supported the creation of technical documentation for newly developed features and API specifications, improving clarity and reducing ramp-up time for future developers.

• Gained foundational knowledge in microservices patterns and distributed systems while contributing to a large-scale autonomous vehicle platform.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Developed and maintained backend services using Python for a scientific operations platform, improving data validation and enrichment processes for experimental data by 25%.

• Assisted in designing and implementing relational database schemas (SQL) to support tracing experiments and samples, ensuring data consistency and query performance for over 100K records.

• Integrated CI/CD pipelines using GitHub Actions to automate testing and deployment of backend services, resulting in a 30% faster release cycle and enhanced code quality.

• Participated actively in code reviews and contributed to writing high-quality, well-tested code, fostering a culture of technical excellence and collaborative development.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
