Professional Experience

Senior Software Engineer *Jul 2025 – Present*

Epik Solutions | Supply Chain Optimization Platform

- Designed and implemented scalable **Python** microservices for a **Supply Chain Optimization** platform on **AWS EKS**, processing 50TB daily, enhancing real-time decision-making by 30%.
- Led the development of **data transformation** pipelines using **Apache Spark** on **AWS Lambda** for large datasets, improving data quality and consistency for 100+ analytical models by 40%.
- Architected and deployed **highly performant optimization systems** utilizing **Docker** and **Kubernetes** for dynamic scaling, reducing simulation runtimes by 60% for critical **Fulfillment Operations**.
- Collaborated with **data scientists** and **domain experts** to translate complex **Operational Research** models into production-ready **Python** code, boosting model accuracy by 25% with cleaner data.
- Established comprehensive **CI/CD pipelines** using **Jenkins** and **GitLab** for automated testing and **model deployment**, reducing integration issues by 90% across distributed services.
- Debugged critical production issues across various **AWS** services and tech stacks, identifying **root causes** and implementing fixes, improving system uptime to 99.99% for mission-critical applications.
- Developed robust **unit testing** frameworks and conducted rigorous **code reviews** for all new features, ensuring high-quality, maintainable code for the entire engineering team by 95%.

Software Engineer *Jul 2022 – Jun 2025*

Samay Systems LLC | Enterprise Data Integration Platform

- Developed and maintained **Python** ETL scripts for **data transformation** and integration of high-volume datasets into enterprise systems on **AWS S3**, processing 10M records daily.
- Designed and optimized complex **SQL** queries and database schemas in **PostgreSQL** for data warehousing, improving query performance by 40% and supporting large data volumes.
- Collaborated with product teams to gather business requirements, translating them into technical designs and **Python** code for new data integration features, aligning with enterprise objectives.
- Built **distributed systems** for real-time **data processing** using **Apache Kafka** and **AWS Lambda**, handling 50,000 events per second, ensuring high availability for critical business applications.
- Implemented automated solutions to detect and resolve **data quality issues**, utilizing **Python Pandas** for validation and cleaning, reducing data errors in reporting by 70% consistently.
- Advocated for and enforced **unit testing** and **peer review** processes for all new code, ensuring high standards for **clean, maintainable code** across a team of six developers.
- Contributed to establishing robust **CI/CD pipelines** using **Git** and **Jenkins** for automated deployments on **AWS EC2**, reducing release cycles from bi-weekly to daily.
- Performed in-depth **root cause analysis** for critical production outages using **monitoring tools** and logs, resolving complex issues within 30 minutes, minimizing system downtime.

Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | Cloud-based Logistics Solutions

- Developed and optimized backend microservices using **Python Django** and **REST APIs** for a logistics platform, improving API response times by 30% for 100K daily requests.
- Designed and managed relational databases with **MySQL** for storing critical operational data, ensuring data integrity and availability for 500+ internal users consistently.
- Wrote **clean, maintainable, and efficient code** adhering to strict coding standards and best practices, reducing future debugging efforts by 25% for new feature development.
- Implemented comprehensive **unit testing** with **pytest** for all new features and bug fixes, significantly improving code reliability by 60% before production deployment.
- Participated actively in **code reviews** and contributed to **version control** using **Git**, ensuring collaborative development and reducing integration errors by 40% monthly.
- Supported **CI/CD pipelines** for automated build and deployment processes on **AWS EC2** instances, streamlining releases and reducing manual deployment time by 50%.

Skills

Languages: Python, SQL

Frameworks & Tools: Django, Pandas, Docker, Kubernetes, Git, Jenkins, pytest, Apache Kafka, REST APIs, Apache Spark

Cloud & Infra: AWS, Distributed Systems, PostgreSQL, MySQL

Concepts: Data Transformation, Optimization, Simulation, CI/CD, Microservices, Data Quality, Root Cause Analysis, Code Reviews, Unit Testing, Operational Research, Supply-chain, Fulfillment Operations

Education

Master's in Computer Science, Oklahoma State University, Stillwater

Bachelor's in Computer Science, JNTU Hyderabad, India
