Lohit Gali

Data Engineer
lohitgali.tech@gmail.com | +1(475)-291-1455

Summary

- Data Engineer with 5+ years of experience building and operating large-scale data systems that power analytics, product insights, and machine-learning workflows
- Deep experience in distributed data processing (Spark), data modeling, and pipeline reliability, with a strong focus on data quality, documentation, and debuggability.
- Comfortable owning ambiguous problem spaces end-to-end and collaborating closely with product, engineering, and data science teams to turn raw data into durable business signals.

Skills

Programming: Python, SQL (advanced), Git
Distributed Processing: Spark (batch & near-real-time), large-scale data pipelines
Data Modeling: Analytical modeling, event & metric modeling, schema evolution
Data Platforms: Data lakes, columnar storage, versioned datasets
ML Enablement: Feature pipelines, training datasets, analytics → ML handoff
Reliability: Data quality checks, backfills, monitoring, SLA ownership
Software Practices: Code reviews, documentation, testing, production debugging
Collaboration: Product analytics, growth metrics, experimentation support

Professional Experience

CIFC Asset Management *Jun 2025 – Present*
Senior Automation Engineer (Enterprise Security & Reporting)
Project: CIFC Enterprise Automation & KPI Reporting Modernization

- Designed and owned distributed Spark pipelines to process multi-domain datasets into analytics-ready fact and dimension models used for executive and operational decision-making.
- Built batch data pipelines that transformed high-volume raw events into curated business metrics, emphasizing correctness, reproducibility, and debuggability.
- Modeled datasets to support trend analysis, cohorting, and time-series analytics, enabling downstream insights without repeated re-processing.
- Implemented data quality validation, anomaly detection, and backfill strategies, improving trust and reducing incident resolution time.
- Partnered with product and business stakeholders to translate ambiguous questions into durable data abstractions rather than one-off queries.
- Authored clear pipeline documentation and data contracts to support long-term maintainability and onboarding.

Samay Systems LLC *Feb 2025 – Jun 2025*
Senior Automation Engineer (Cloud & Compliance)
Project: Compliance Platform (SaaS) – Security & Compliance Automation

- Built end-to-end data pipelines that transformed raw operational and application data into feature-ready datasets for analytics and ML workflows.
- Designed schemas optimized for both exploratory analytics and model training, balancing flexibility with performance.
- Developed incremental ingestion pipelines from multiple upstream systems, ensuring idempotency and correctness at scale.

- Collaborated with data scientists to define clear boundaries between data engineering and modeling, accelerating experimentation cycles.
- Owned production reliability by adding monitoring, logging, and failure isolation across pipelines.

Arvam Tech *Jul 2023 – Jan 2025*
Enterprise Automation Engineer
Project: Enterprise Asset Management System

- Implemented Spark-based data transformations to consolidate large, heterogeneous datasets into a unified analytics layer.
- Designed analytical models that supported cross-domain reporting without tightly coupling pipelines to presentation logic.
- Tuned distributed workloads by optimizing joins, partitioning, and file layouts to improve performance at scale.
- Supported downstream analytics teams by ensuring datasets were well-documented, discoverable, and stable over time.

RHYM Tech *Aug 2022 – May 2023*
Associate solutions Engineer
Project: Cybersecurity Threat Intelligence Platform

- Built data pipelines to ingest and normalize high-volume event and telemetry data.
- Supported early-stage analytics and ML initiatives by producing clean, consistent datasets with clear semantics.
- Assisted in debugging production data issues by tracing lineage and validating upstream assumptions.

ZeMoSo Technologies *Jul 2021 – Aug 2022*
Associate Developer
Project: Biotech LabOps Automation

- Developed data ingestion and transformation logic supporting analytical and operational use cases.
- Assisted in schema design and data modeling decisions as product requirements evolved.
- Learned production data engineering fundamentals including testing, documentation, and operational support.

Projects

Enterprise Analytics Platform – CIFC
Problem: Business and operational data lived in siloed systems, limiting insight velocity.
Solution: Built distributed Spark pipelines and analytical models that enabled reliable, reusable metrics across teams.
ML-Ready Data Pipelines – Samay Systems
Problem: Data scientists lacked stable, well-modeled datasets for experimentation.
Solution: Designed analytics-to-ML data pipelines that produced reproducible, feature-ready datasets.
Enterprise Asset Management Automation – Arvam Tech
Problem: Manual asset tracking was inefficient.
Solution: Automated data flows with PowerShell + Express.js, integrated Power BI, and used Power Automate for approval chains.

Education

Master's in Computer Science, Oklahoma State University, Stillwater, OK *May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India *Jun 2021*
