Neel Gali

Software Engineer – Data & Cloud Systems
neelgali7@gmail.com | +1 (475)-291-1455 | San Jose, CA

Summary

Software Engineer with hands-on experience building **scalable backend services and data pipelines** supporting batch and near-real-time workloads. Strong foundation in **Java and Python**, with growing expertise in **distributed systems, cloud infrastructure, and data processing frameworks**. Passionate about learning modern data technologies and collaborating with senior engineers and data scientists to power analytics and AI-driven use cases.

Technical Skills

Languages: Java, Python, Scala (familiar)
Data & Processing: batch & streaming pipelines, event processing, analytics workloads
Frameworks & Systems: Spark, Kafka (exposure), RESTful backend services
Cloud: AWS, Azure (data services, compute, storage)
Databases: SQL, NoSQL, data modeling fundamentals
Engineering Practices: unit testing, integration testing, code reviews, CI/CD
Reliability: logging, monitoring, debugging, performance tuning

---

Professional Experience

Epic Solutions (*Jun 2025 – Present)*

Software Engineer II (Data & Platform Systems)

- Developed **backend services and data pipelines** to process and aggregate large volumes of event data, enabling analytics and downstream AI use cases.
- Wrote **clean, well-tested Java and Python code** to support both batch and near-real-time workloads, improving system throughput and stability.
- Collaborated with senior engineers to design **scalable data processing components**, balancing performance, correctness, and maintainability.
- Assisted data scientists by preparing **analytics-ready datasets** and ensuring data consistency across pipelines.
- Participated in **code reviews and release cycles**, incrementally improving code quality and system reliability.
- Investigated and resolved production issues by analyzing logs, metrics, and execution paths, contributing to improved uptime.

Samay Systems LLC (*Jul 2024 – Jun 2025)*

Software Engineer I (Data-Intensive Backend Services)

- Built **data-driven backend services** powering analytics dashboards and reporting features.
- Implemented **pipeline logic** to transform and aggregate structured datasets for downstream consumption.
- Worked with engineers to integrate data services into **cloud environments**, applying best practices for deployment and monitoring.
- Strengthened system robustness by adding **tests, logging, and failure handling**.
- Gained experience contributing to **distributed systems discussions**, learning about scalability limits and fault tolerance.

Monarch Tractor (*Jun 2023 – Aug 2023)*

Software Development Engineer Intern (Automation & Data Workflows)

- Developed backend automation services to streamline operational workflows using **Python and REST APIs**.
- Built **background jobs** to process and validate data reliably, ensuring idempotency and observability.
- Learned to operate production systems by debugging failures and improving reliability through logging and metrics.
- Collaborated with cross-functional teams to deliver maintainable and well-documented solutions.

ZeMoSo Technologies (*Jul 2021 – Aug 2022)*

Associate Developer (Backend & Data Systems)

- Implemented backend APIs supporting **data-heavy application workflows**, emphasizing performance and correctness.
- Built features requiring **efficient querying and transformation** of datasets under concurrent access.
- Partnered with frontend engineers to ensure backend systems supported responsive and accessible user experiences.
- Participated in production support and root-cause analysis, building a strong debugging foundation.

Education

Master's in Computer Science — Oklahoma State University
Bachelor's in Computer Science — JNTU Hyderabad
