Neel Gali

Software Engineer – Distributed Systems & Infrastructure
neelgali7@gmail.com | +1 (475) 291-1455 | United States

Summary

Software Engineer with hands-on experience building and operating **large-scale distributed systems** that power internal and external customer experiences. Strong foundation in **Go, Java, and systems-level programming**, with a track record of shipping reliable, well-factored code in production. Comfortable working autonomously, debugging across the stack, and collaborating closely with customers and stakeholders to deliver durable infrastructure.

Technical Skills

Languages: Go, Java, C/C++, Python
Computer Science: Data structures, algorithms, concurrency, memory management
Distributed Systems: service-oriented architectures, fault tolerance, consistency, scalability
Infrastructure: backend services, internal tooling, customer-facing infrastructure
Datastores: SQL and NoSQL systems
Reliability: debugging, incident response, performance optimization
Engineering Practices: code reviews, testing, production ownership
Collaboration: roadmap planning, cross-team execution, customer-driven design

---

Professional Experience

Epic Solutions
Software Engineer II
June 2025 – Present

- Designed and shipped **distributed backend services** that power critical customer-facing and internal workflows, prioritizing reliability and low-latency behavior.
- Built **well-factored algorithms and data structures** to handle high request volumes while maintaining predictable performance under load.
- Debugged **production issues across multiple services and system layers**, tracing failures through logs, metrics, and execution paths to identify root causes.
- Partnered with internal customers to understand pain points and translate them into infrastructure improvements that reduced operational friction.
- Participated in **roadmap planning and prioritization**, balancing near-term delivery with long-term system health.
- Held a high bar for production quality by strengthening tests, improving observability, and reviewing peer code for correctness and maintainability.

Samay Systems LLC
Software Engineer I
July 2024 – June 2025

- Developed **large-scale backend systems** supporting analytics and customer-facing features used by multiple teams.
- Implemented **efficient data processing paths** using strong algorithmic reasoning to reduce latency and resource usage.

- Contributed to shared infrastructure by improving service interfaces and failure handling patterns.
- Worked closely with engineers across workstreams to coordinate changes and ensure smooth deployments.
- Investigated and resolved complex production issues, implementing fixes that improved long-term system resilience.

Monarch Tractor
Software Development Engineer Intern
June 2023 – August 2023

- Built backend automation services to support internal users, focusing on correctness, reliability, and ease of use.
- Integrated multiple systems into cohesive workflows, ensuring consistent behavior across failure scenarios.
- Gained hands-on experience operating production systems and supporting real users through debugging and improvements.

ZeMoSo Technologies
Associate Software Engineer
July 2021 – August 2022

- Implemented backend APIs and services supporting high-volume application workflows.
- Applied data structures and algorithms to optimize request handling and response times.
- Participated in production support and post-incident analysis, strengthening debugging and systems thinking skills.
- Collaborated across teams to deliver features from development through release.

Education

Master of Science in Computer Science
Oklahoma State University

Bachelor of Technology in Computer Science
JNTU Hyderabad
