Lohit Gali

Information Security Software Engineer

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Information Security Software Engineer with 3+ years of experience designing, developing, and maintaining internal web applications and automation pipelines for InfoSec processes. Proficient in building self-service portals, integrating enterprise systems, and implementing robust backend logic using Python (FastAPI/Flask), React, and PostgreSQL within Docker and Kubernetes environments.

TECHNICAL SKILLS

Frontend Technologies: JavaScript, TypeScript, React, REST / GraphQL APIs, component-based UI, state management, admin panels

Backend Development: Python, FastAPI, Flask, REST API design, asynchronous processing, background jobs, PostgreSQL, Webhooks, event-driven architectures

DevOps & Cloud: Docker, Kubernetes, GitLab CI/CD, Prometheus, Grafana, Centralized logging, observability, Secrets management

Integrations & Automation: Jira, SIEM, IAM, CMDB, GitLab, enterprise systems, automation pipelines, workflow engines

Security & Compliance: InfoSec processes, access management, incident and investigation workflows, security assessments, secure coding, security-by-design principles

PROFESSIONAL EXPERIENCE

Software Engineer, InfoSec Automation | Epik Solutions

Jun 2025 - Present

• Developed internal web applications and self-service portals using React, TypeScript, Python (FastAPI), and PostgreSQL to automate InfoSec processes, including access management and incident investigation workflows, significantly improving operational efficiency for SOC and GRC teams.

• Designed and implemented robust backend logic for automation and orchestration, leveraging FastAPI, asynchronous processing, and event-driven architectures to streamline security assessment and risk management workflows, reducing manual effort by 40% and enhancing compliance posture across enterprise systems.

• Integrated core security and corporate systems such as Jira, SIEM, IAM, and CMDB using REST APIs and webhooks to centralize data for incident response and asset management, providing a unified view for investigation teams and accelerating resolution times by 25%.

• Contributed to the architecture and design of scalable internal services with a focus on reliability and maintainability within a Docker and Kubernetes environment, ensuring high availability for critical InfoSec automation tools used by AppSec and Platform teams.

• Implemented comprehensive CI/CD pipelines using GitLab CI/CD, Docker, and Kubernetes to automate deployments, integrate security checks, and ensure continuous delivery of production-ready web applications, reducing deployment risks and accelerating feature release cycles.

• Provided documentation for APIs, architectural decisions, and user workflows, collaborating with SOC and AppSec teams to foster knowledge transfer and facilitate onboarding for new team members, ensuring clarity and consistency in system understanding and maintenance.

Software Engineer, Compliance Solutions | Samay Systems LLC

July 2024 - Jun 2025

• Designed and built Python-based backend services leveraging Flask, PostgreSQL, and integration-driven development to collect, validate, and summarize evidence data from AWS, Azure, and GitLab for compliance and audit workflows, improving data integrity and reducing manual collection time by 30%.

• Developed self-service portals and internal dashboards using React and TypeScript to provide intuitive interfaces for compliance assessments, empowering GRC teams with tools for risk analysis and security assessments, enhancing visibility and control over regulatory requirements.

• Implemented asynchronous workflows and background jobs to efficiently process large volumes of compliance data and generate reports, reducing processing time by 50% and ensuring timely delivery of critical information for internal stakeholders and external audits.

• Integrated with various cloud platforms and enterprise systems utilizing REST APIs and secure credentials management to automate compliance validation across multi-cloud environments, enhancing data consistency and auditability for regulated environments.

• Contributed to the design of complex relational schemas and SQL workflows to support multi-tenant compliance validation at scale, ensuring data integrity and scalability for rapidly growing compliance datasets, supporting the needs of diverse customer requirements.

Software Engineer Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Supported the development of backend services for operational data processing using Python and SQL for data ingestion and transformation, improving the accuracy of system performance metrics for engineering teams.

• Built automation scripts and utility tools using Python and Bash scripting to streamline data preprocessing and system monitoring tasks, enhancing efficiency of data pipelines and reducing manual intervention.

• Gained hands-on experience with Docker and basic CI/CD concepts by containerizing development environments and automating build processes to ensure consistent deployment across different testing stages, supporting rapid iteration and quality assurance for new features.

• Collaborated with senior engineers on system integration challenges, documenting APIs and contributing to architectural discussions to ensure seamless communication between different system components, facilitating the delivery of robust and reliable software solutions.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to the development of backend services for a cloud-based scientific operations platform using Python and relational databases (PostgreSQL) to validate, enrich, and structure experimental data, ensuring data quality and reliability for downstream analysis and decision-making.

• Assisted in building API endpoints and data processing pipelines to support internal dashboards and data visualization tools, providing researchers with real-time insights into experimental progress and improving operational transparency.

• Integrated CI/CD pipelines to automate testing and deployment of backend services, ensuring code quality and accelerating the release cycle for new features while adhering to internal governance standards.

• Documented API specifications and backend logic to facilitate team collaboration and knowledge transfer, improving maintainability of the platform and reducing onboarding time for new developers.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
