Lohit Gali

Senior Software Engineer (Web)

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Senior Software Engineer with 3+ years of experience architecting and implementing sophisticated web features and reusable UI components. Proficient in JavaScript, React, Next.js, and TypeScript, specializing in high-performance single page web applications. Proven ability to collaborate with cross-functional teams, ensuring robust and scalable solutions through code reviews, unit tests, and effective troubleshooting.

TECHNICAL SKILLS

Programming Languages: JavaScript, TypeScript, Python, Java, Go

Frontend Technologies: React, Next.js, HTML5, CSS3, GraphQL, Relay, Redux

Backend Technologies: Node.js, Express.js, RESTful APIs, SQL (PostgreSQL), MongoDB

Tools & Practices: Git, Docker, Webpack, Babel, Jest, React Testing Library, CI/CD (GitHub Actions, Jenkins), Agile/Scrum, Asynchronous Programming, Responsive Design, Cross-Browser Compatibility

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Web) | Epik Solutions

Jun 2025 - Present

• Led the architecture and implementation of web features for a cybersecurity threat intelligence platform, utilizing Next.js and React for a high-performance, data-intensive single page web application.

• Engineered highly reusable UI components and a comprehensive design system with TypeScript, improving development consistency and accelerating feature delivery by 40% across three major product lines.

• Collaborated extensively with web, design, and product teams to define requirements and deliver critical web features, such as advanced analytics data dashboards, directly impacting strategic decision-making.

• Designed and optimized server-side technologies using Node.js and Express.js, managing API integrations with internal services and third-party data sources, ensuring reliable data flow for live systems.

• Mentored 3 junior engineers on best practices for TypeScript, React, and Next.js development, fostering a high-performing team culture and improving overall code quality through rigorous code reviews.

• Implemented real-time data streaming features for security telemetry visualization using WebSockets and GraphQL subscriptions, enhancing user monitoring capabilities and reducing incident response time by 25%.

Software Engineer (Web) | Samay Systems LLC

July 2024 - Jun 2025

• Architected and implemented a new customer management portal using React and Next.js, improving client data accessibility and reducing support query resolution time by 35%.

• Developed robust web features using TypeScript for improved code robustness and scalability, integrating with Node.js server-side technologies to process client requests securely and efficiently.

• Designed and built reusable UI components that were shared across multiple internal web applications, leveraging Storybook for documentation and boosting frontend team's velocity by 20%.

• Implemented complex state management solutions using Redux Toolkit for sophisticated single page web applications, ensuring data consistency and enhancing user experience for thousands of daily users.

• Performed thorough code reviews and contributed to CI/CD pipelines for web applications, maintaining high code quality standards and reducing deployment errors by 50% across development cycles.

• Integrated GraphQL APIs for efficient data fetching, reducing over-fetching by 60% compared to traditional REST APIs and significantly improving application responsiveness for data-intensive sections.

Frontend Web Developer Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Contributed to the development of a mobile-friendly single page web application for real-time vehicle

monitoring, using React to display operational telemetry and improve field team efficiency by 25%.

• Built interactive mapping features displaying geospatial data for autonomous agricultural vehicles, utilizing Mapbox GL JS with JavaScript to visualize routes and sensor data, significantly enhancing operator situational awareness.

• Developed reusable UI components for data entry and display within the vehicle management dashboard, leveraging React best practices to ensure consistency and accelerate future feature development by 30%.

• Optimized frontend performance of web applications by implementing lazy loading and code splitting techniques, reducing initial load times by 40% and improving user engagement on remote connections.

• Assisted in troubleshooting and debugging web features in production environments, collaborating with backend engineers to resolve critical issues within 2 hours, ensuring continuous operation of key vehicle monitoring systems.

Associate Software Engineer (Frontend) | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Implemented core UI components using JavaScript and modern CSS, enhancing user experience across the platform by standardizing visual elements and reducing development time by 15% for feature teams.

• Developed interactive data visualizations for the scientific operations platform, leveraging D3.js to display complex experimental data, improving data interpretation speed for researchers by 20%.

• Collaborated with product and design teams to translate wireframes into responsive web interfaces, ensuring cross-device and browser compatible solutions for laboratory users, resulting in consistent user experience across 98% of devices.

• Participated in code reviews and applied unit tests for new web features, contributing to a 10% reduction in production bugs and maintaining uptime for live systems.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
