Neel Gali

Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Languages: C, C++, Python, Go, TypeScript, JavaScript, SQL, Bash
Systems: Linux, OS Internals, Memory Management, Multithreading, Concurrency, Networking, IPC, Sockets
Data Infra: Distributed Systems, Storage Services, Metadata Services, Caching, Replication, Data Movement
Backend: Go Microservices, Python Services, REST APIs, GraphQL, Event-Driven Architecture, Kafka, Redis
Cloud/AI Infra: AWS, Docker, Kubernetes, Terraform, CI/CD, AI/ML Pipelines, RAG Workloads, Data Pipelines
Quality: Debugging, Performance Profiling, Benchmarking, Load Testing, OpenTelemetry, Prometheus

Professional Experience

Software Engineer AI *Jun 2025 - Present*

Epik Solutions | Enterprise Security Data Infrastructure

- Built high-throughput **C++/Go/Python** services for enterprise security telemetry, focusing on low-latency ingestion, metadata indexing, caching, and reliable data movement across distributed systems.
- Debugged production services on **Linux**, tracing memory pressure, queue backlogs, network timeouts, container failures, and concurrency issues across multi-service deployments.
- Optimized **Redis** caching and PostgreSQL-backed metadata lookups for hot read paths, reducing database load by **60%** and improving API response times by **40%**.
- Implemented **multithreaded workers** and asynchronous processing for event enrichment pipelines, improving throughput by **35%** while maintaining fault isolation and replay safety.
- Instrumented services with **OpenTelemetry, Prometheus, and Grafana**, adding profiling dashboards that reduced mean incident detection time by **40%**.
- Used AI-assisted coding and debugging workflows to accelerate test generation, log analysis, and root-cause review while preserving code review, security, and ownership standards.

Software Engineer (Full Stack AI) *Jul 2024 - Jun 2025*

Samay Systems LLC | B2B SaaS Compliance AI Platform

- Designed distributed backend systems in **Go, Python, and C++-adjacent service layers**, supporting tenant-isolated data ingestion, evidence storage, lifecycle tracking, and retrieval workflows for **15+** clients.
- Built event-driven data pipelines with **Kafka, SQS, PostgreSQL, Redis**, and object storage, improving processing latency by **35%** across audit, identity, and document workloads.
- Developed infrastructure for **AI/ML and RAG workloads**, including document ingestion, embedding preparation, metadata filtering, retrieval validation, and model-output evaluation datasets.
- Tuned PostgreSQL schemas, indexes, and query plans for high-read metadata services, reducing slow report generation by **70%** and improving data integrity under concurrent access.
- Containerized backend services with **Docker** and deployed on **Kubernetes**, adding health checks, rollback paths, and CI/CD gates to improve reliability across environments.
- Participated in architecture reviews, code reviews, and production troubleshooting with product, SRE, and platform teams to harden distributed service behavior.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*

Monarch Tractor | Autonomous Vehicle Perception

- Built **Python** preprocessing pipelines for image, sensor, and telemetry datasets used in perception model training, converting raw field data into validated artifacts for downstream ML workflows.
- Evaluated computer vision models with **PyTorch, TensorFlow, and OpenCV**, debugging quality regressions and edge cases across autonomous perception datasets.

Software Engineer *Jul 2021 - Aug 2022*

ZeMoSo Technologies | LabOps / Scientific Workflow Platform

- Delivered **C++/Python-adjacent systems tooling** and backend services for a regulated LabOps platform, supporting experiment tracking, sample metadata, and analysis workflows for **500+ scientists**.
- Built **REST APIs**, async validation jobs, and metadata services across **10+** product modules for inventory, sample lineage, file uploads, and operational reporting.
- Analyzed and optimized slow **PostgreSQL** queries through execution-plan profiling and index tuning, improving application response times by **35%**.
- Authored **100+ automated tests**, debugged production defects on Linux-hosted services, and documented release behavior for regulated scientific workflows.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India *Jul 2017 - Jun 2021*
