Summary

Software engineer building **Python automation tools, enterprise integrations, and full-stack applications** across security, compliance, and scientific workflows. Combines cloud infrastructure, CI/CD, testing, and documentation with hands-on AI/LLM development and safeguards for reliable automation.

Technical Skills

Languages: Python, Bash, PowerShell, SQL, Java, Ruby, JavaScript, TypeScript
Cloud & Infrastructure: AWS (Lambda, ECS, SQS, S3, Step Functions), Terraform, AWS CDK, Docker, Kubernetes
DevOps & Quality: Jenkins, GitHub Actions, Git, CI/CD, Automated Testing, Linux, Production Debugging
Full Stack & Integrations: React, Ruby on Rails, REST APIs, HTTP, JSON, GraphQL, Webhooks, PostgreSQL, Neo4j
AI & Operations: LangChain, RAG, Tool Calling, AWS Bedrock, Azure OpenAI, LLM Evaluations, CloudWatch
Engineering Practices: API Documentation, Deployment Guides, Technical Handoffs, RBAC, Audit Logging

Professional Experience

Software Engineer AI *2025 – Present*
Epik Solutions | CIFC Asset Management - Enterprise Security

- Built **Python services and APIs** to correlate security alerts, logs, and tickets into prioritized incident summaries with supporting evidence and remediation guidance, streamlining analyst triage.
- Packaged **reusable automation components** for retrieval, workflow state, guardrails, and error handling so adjacent teams could build on shared services rather than duplicate integration logic.
- Developed **RAG and LLM evaluation workflows** with versioned prompts and regression checks to assess incident reasoning and remediation suggestions before releasing changes.
- Implemented **human approval workflows, RBAC, and audit trails** to govern AI-assisted actions and preserve traceability for sensitive enterprise security operations.
- Monitored production automation and investigated failures across services, APIs, and model outputs; used operational feedback to refine workflows and improve reliability.

Founding Engineer (Full Stack AI) *2023 – 2025*
Samay Systems LLC | B2B Compliance AI SaaS

- Built **Python automation and enterprise API integrations** for GitHub, Jira, and Microsoft Entra ID, scheduling evidence collection and normalizing data for compliance controls and reporting.
- Developed AWS workflows using **Lambda, ECS, SQS, and Step Functions**; codified infrastructure with AWS CDK and connected PostgreSQL, S3, and Neo4j with tenant-aware data processing.
- Delivered **React interfaces and REST/GraphQL APIs** for integration configuration, control testing, and evidence review, translating business requirements into usable end-to-end workflows.
- Built **LangChain tool-calling agents and RAG** with Bedrock and Azure OpenAI for evidence analysis; applied tenant isolation, evaluations, and release controls to support dependable AI automation.
- Wrote **architecture, deployment, and troubleshooting documentation** covering integration behavior, data flows, and known limitations so engineers could operate and extend the tooling.

Software Engineer *2020 – 2022*
ZeMoSo Technologies | LabOps / Scientific Workflow Platform

- Developed **Ruby on Rails APIs and React features** for inventory, samples, compound records, and experiment datasets, connecting relational data models with role-based scientific workflows.
- Wrote **backend and frontend regression tests** for permissions, data validation, uploads, and batch relationships; worked with Jenkins CI/CD and Docker environments to validate changes.
- Diagnosed defects across HTTP/JSON payloads, backend queries, and UI state; fixed duplicate pagination, inventory filters, and persistence issues to restore correct data behavior.
- Extended a **shared React component library** and updated consuming screens, coordinating code reviews with onshore teams to deliver consistent UI behavior across the application.

Education

Master's in Computer Science, Oklahoma State University 2024
Bachelor's in Computer Science, JNTU Hyderabad 2021
