Neel Gali

Software Engineer

neelgali7@gmail.com | +14752911455 | Stillwater, OK

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of progressive software engineering experience, leveraging strong Computer Science fundamentals to develop robust and scalable solutions. Proficient in applying API design principles and best practices across various platforms, with hands-on experience in RESTful API development and integrating with OpenAPI/Swagger specifications. Eager to contribute to innovative projects leveraging modern software engineering practices.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, TypeScript, SQL

API Development: RESTful APIs, GraphQL, OpenAPI, Swagger, API design principles

Web Technologies: React, Node.js, Express.js, Microservices

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Git, CI/CD

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB

Core Engineering: Computer Science Fundamentals, Data Structures, Algorithms, System Design, Agile Methodologies, Problem Solving

PROFESSIONAL EXPERIENCE

Software Engineer | Epik Solutions

Jun 2025 - Present

• Designed and implemented scalable backend services using Python and RESTful APIs, adhering to robust API design principles and best practices for high-volume data processing; optimized service performance by 30%, reducing latency for internal security teams.

• Developed and maintained critical microservices in a cloud-native AWS environment, focusing on efficient data ingestion and processing pipelines; ensured system scalability and reliability, supporting real-time data analysis for threat intelligence applications.

• Collaborated with product teams to define API specifications and integrate third-party services, leveraging OpenAPI/Swagger for clear documentation and seamless integration; improved development efficiency by 20% for dependent teams.

• Contributed to the full software development lifecycle, from requirements gathering to deployment, applying Agile methodologies to deliver features efficiently; consistently met project deadlines, enhancing team productivity and project velocity.

• Implemented automated testing frameworks (unit, integration, end-to-end) for backend services, ensuring code quality and reducing post-release defects by 25%; maintained high standards of software engineering best practices.

• Deployed and monitored applications using Docker and Kubernetes, managing CI/CD pipelines for continuous integration and delivery; streamlined deployment processes, achieving 99.9% uptime for critical business applications.

Junior Software Engineer | Samay Systems LLC

July 2024 - Jun 2025

• Developed and maintained robust backend services using Python and Node.js, creating RESTful APIs that enforced strict tenant isolation for compliance dashboards; ensured data security and integrity for multi-tenant applications.

• Implemented data collection and validation modules, integrating with AWS, Azure, and GitHub APIs, following API design principles and best practices; standardized data inputs for downstream processing, improving data reliability by 35%.

• Contributed to the design and implementation of compliance control validation views, utilizing React for an

intuitive user interface; enhanced user experience and clarity for complex compliance data across multiple frameworks.

• Designed and optimized complex relational database schemas (PostgreSQL) to support multi-tenant, multi-framework compliance validation at scale; improved query performance by 40% for customer reporting and analytics.

• Deployed applications to production environments using AWS cloud-native infrastructure, Docker, and CI/CD pipelines; ensured high availability and seamless releases for critical compliance tools.

• Participated in comprehensive code reviews and adopted software engineering best practices, contributing to a collaborative development environment; maintained high code quality standards and reduced technical debt by 15%.

Software Development Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Developed Python-based data preprocessing pipelines to transform raw sensor and image data into structured datasets; improved data preparation efficiency by 50% for machine learning engineers.

• Assisted in the implementation of object detection models using PyTorch and TensorFlow, applying strong Computer Science fundamentals to optimize algorithms for real-time performance; supported perception systems for autonomous vehicles.

• Contributed to UI enhancements and backend integrations for internal development tools using JavaScript; improved usability and streamlined workflows for the engineering team by 20%.

• Gained hands-on experience with cloud-hosted production deployments, monitoring model inference and system performance; ensured reliability and stability of deployed solutions in real-world environments.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to a cloud-based scientific operations platform, designing and implementing backend APIs to trace experiments and samples; ensured data integrity and auditability for scientific workflows.

• Collaborated with domain experts to translate scientific workflows into structured API design principles and intuitive UI components; enhanced platform usability and adoption among scientists by 25%.

• Designed and implemented database migration files for PostgreSQL, managing schema consistency across development and production environments; ensured data reliability for critical scientific data.

• Supported CI/CD pipeline integration, validating code quality and promoting artifacts while adhering to security controls; improved release efficiency and maintained compliance standards.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
