Professional Experience

Senior Software Engineer *Jul 2025 – Present*

Epik Solutions | Energy Sector A&D SaaS Platform

- Designed and deployed a core **Python** backend service on **GCP Cloud Run** using **FastAPI**, processing 15,000 requests/minute for critical asset evaluation workflows, boosting platform efficiency by 30%.
- Implemented **LLM integrations** via **OpenAI API** within existing backend services, enabling dynamic data analysis for energy reserves, improving user report generation time by 40%.
- Architected a data pipeline leveraging **AWS Lambda** and **DynamoDB** for real-time forecasting models, managing 500GB daily data streams, reducing data processing latency by 60%.
- Led end-to-end development of critical **TypeScript** microservices interacting with **PostgreSQL** to support new features, achieving 99.9% uptime for core platform functionalities.
- Optimized complex **SQL** queries across **PostgreSQL** and **MongoDB** for reservoir management analytics, cutting report generation time from 15 to 3 minutes for enterprise clients.
- Pioneered **AI-first development** practices using internal agent frameworks to automate code generation and testing, accelerating feature delivery timelines by an average of 25%.
- Developed robust **REST APIs** in **Python** using **Docker** for asset acquisition and divestiture modules, facilitating secure data exchange and reducing integration effort by 35%.

Software Engineer *Jul 2024 – Jun 2025*

Samay Systems LLC | Cloud-based Data Integration Platform

- Developed high-performance **Python** backend services for a data integration platform, handling 20,000 concurrent user requests daily, improving data synchronization speed by 25%.
- Designed and implemented database schemas in **PostgreSQL** and **MongoDB** for client data storage, optimizing query response times by 40% across various data types.
- Built and maintained secure **RESTful APIs** using **FastAPI** for third-party integrations, processing 10 million transactions monthly, enhancing partner connectivity by 50%.
- Migrated legacy data pipelines to **AWS S3** and **Lambda** for improved scalability, reducing operational costs by 20% and processing delays by 3 hours.
- Implemented **CI/CD** pipelines using **GitLab CI** for automated deployments, decreasing release cycles from bi-weekly to daily, improving deployment efficiency by 75%.
- Contributed to infrastructure as code efforts with **Terraform** on **AWS**, provisioning resources efficiently and reducing manual setup time by 60% for new environments.
- Optimized existing **Python** scripts for data processing, reducing execution time from several hours to minutes, enabling real-time analytics for key business metrics.
- Monitored service performance and reliability using **Datadog** and **CloudWatch**, proactively addressing issues and maintaining 99.95% availability for critical services.

Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | Enterprise Web Application Development

- Developed robust **Python** backend services for custom enterprise web applications, supporting 5,000 daily active users with sub-second response times.
- Implemented and managed **PostgreSQL** databases, designing efficient schemas and optimizing **SQL** queries, improving data retrieval speeds by 30% for client applications.
- Built secure **RESTful APIs** in **Python** for data exchange between frontend and backend systems, ensuring reliable integration for multiple client projects.
- Utilized **Git** and agile methodologies for version control and project management, collaborating effectively with cross-functional teams on feature development.
- Deployed and managed applications on cloud infrastructure, ensuring high availability and scalability for critical client-facing platforms, achieving 99.8% uptime.
- Conducted thorough unit and integration testing for all developed modules, ensuring code quality and reducing post-deployment bugs by over 20%.

Skills

Languages: Python, TypeScript, SQL
Frameworks & Tools: LLM Integrations, OpenAI API, Agent Frameworks, FastAPI, Docker, Git, REST, GitLab CI, Terraform, Datadog
Cloud & Infra: GCP, AWS, Cloud Run, Lambda, S3, CloudWatch, Serverless, PostgreSQL, MongoDB, DynamoDB
Concepts: System Design, Data Modeling, Microservices, CI/CD, ETL, Scalability, Observability, Agile, Multi-tenancy, Performance Optimization

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
