Neel Gali

Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Languages: Python, Go, TypeScript, JavaScript, Java, SQL, Bash
Backend: Go/Python Microservices, Node.js, Spring Boot, REST APIs, GraphQL, Event-Driven Systems
Payments/Correctness: Ledger State Models, Reconciliation, Idempotency, Retries, Deterministic Replay
Reporting/Data: Regulatory Reporting, Audit Trails, Loan-Tape Pipelines, SQL, PostgreSQL, Neo4j, Redis
Cloud/Infra: AWS Lambda, ECS, S3, SQS, RDS, CDK, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins
AI/Product: React, TypeScript, LangChain, AWS Bedrock, Azure OpenAI, RAG, n8n, Jira, Confluence

Professional Experience

Software Engineer AI *Jun 2025 - Present*

Epik Solutions | Enterprise Security & Operational Workflow Platform

- Built **Go and Python microservices** integrating enterprise platform APIs, automating high-trust workflows for **500+ users** and reducing mean time to resolution by **15 minutes**.
- Designed **event-driven reconciliation pipelines** that compared internal state, downstream API responses, telemetry events, and manual overrides to surface mismatches before they became production incidents.
- Developed **React/TypeScript dashboards** for audit trails, operational reporting, data quality checks, and exception queues across **15+ backend systems**, eliminating **20+ hours/week** of manual reporting.
- Implemented **idempotent processing, retry-safe jobs, and deterministic recovery** for workflow automation, reducing duplicate processing and inconsistent state across distributed services.
- Deployed services with **Docker, Kubernetes, Terraform, and GitHub Actions**, improving pipeline success rates by **25%** while strengthening validation, logging, and rollback paths.
- Partnered with product, QA, DevOps, and operators to translate ambiguous workflow requirements into concrete API behavior, test coverage, documentation, and release-ready features.

Founding Engineer (Full Stack AI) *Jul 2024 - Jun 2025*

Samay Systems LLC | B2B SaaS Compliance AI Platform

- Architected a **multi-tenant SaaS platform** on AWS serving **15+ enterprise clients** and **10,000+ users/org**, owning backend architecture, tenant isolation, and release reliability in a fast-moving startup.
- Designed **ledger-style state models** and database validation for audit workflows, ensuring every evidence, identity, policy, and reporting change had traceable source-of-truth history.
- Built **regulatory reporting and audit-trail surfaces** with React, GraphQL, PostgreSQL, and Neo4j, giving enterprise reviewers clear visibility into compliance status and operational exceptions.
- Developed **distributed data pipelines** ingesting **5M+ daily identity events**, adding reconciliation logic across cloud systems, graph data, document stores, and customer-facing reports.
- Productionized AI-assisted workflows using **AWS Bedrock, Azure OpenAI, LangChain, and RAG**, reducing manual evidence review by **70%** while keeping citations, review queues, and human approval paths.
- Deployed **17 AWS CDK stacks** across Lambda, ECS Fargate, AppSync GraphQL, SQS, S3, RDS, and Secrets Manager, establishing reproducible environments and CI/CD release patterns.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*

Monarch Tractor | Physical AI & Autonomous Systems

- Built **Python telemetry pipelines** for sensor, image, and field-operation datasets used in autonomous perception workflows, converting raw physical-world data into validated artifacts.
- Delivered React and Go features for internal **MLOps data labeling tools**, improving annotation throughput by **20%** for computer-vision model iteration.

Software Engineer *Jul 2020 - Aug 2022*

ZeMoSo Technologies | LabOps / Scientific Workflow Platform

- Delivered **full-stack LabOps features** using React, Ruby on Rails, Java Spring Boot, and PostgreSQL for experiment tracking, inventory, batch processing, and sample metadata used by **500+ scientists**.
- Designed workflows across **10+ product modules** including compounds, LCMS uploads, container linkage, and review queues, improving correctness across dependent scientific records.
- Built REST APIs, audit logs, and database validation around regulated data changes, strengthening traceability, reconciliation, and operational reporting for scientific workflows.
- Optimized PostgreSQL and MySQL queries for complex reports, reducing generation time from **2 minutes to 15 seconds** while improving data integrity checks and support visibility.
- Authored **100+ automated tests**, resolved critical production issues, and integrated Jenkins CI/CD gates for high-trust releases in an Agile engineering team.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
