Lohit Gali

Software Engineer
lohitgali.tech@gmail.com | +1(475)-291-1455

Summary

- Senior Backend Engineer with 5+ years of experience building and operating large-scale Java microservices on cloud platforms.
- Deep expertise in Spring Boot, distributed system design, platform development, Kafka-based messaging, and NoSQL data stores.
- Proven leader of small engineering teams, comfortable owning delivery end-to-end—from discovery and design through production support, RCA, and stakeholder communication.

Skills

Languages: Java (Core Java, J2EE), SQL
Frameworks: Spring, Spring Boot, REST APIs
Architecture: Microservices, event-driven systems, scalable platform design
Messaging: Kafka (producers, consumers, async workflows)
Datastores: NoSQL (Cosmos-like, Cassandra-style), relational databases
Cloud: Azure, GCP
Engineering Practices: Code reviews, design reviews, CI/CD, unit testing
Leadership: Team mentoring, cross-functional collaboration, delivery ownership

Professional Experience

CIFC Asset Management *Jun 2025 – Present*
Senior Backend Engineer (Platform & Services)

- Designed and implemented Spring Boot microservices to power internal platforms, focusing on scalability, fault tolerance, and clear service boundaries.
- Built RESTful APIs that exposed core business capabilities while enforcing validation, authentication, and backward compatibility.
- Implemented Kafka-based asynchronous workflows to decouple services and improve system resilience under load.
- Designed NoSQL data models optimized for high-throughput reads and writes, supporting low-latency service responses.
- Led delivery for medium-scale initiatives by translating business requirements into technical designs and executable plans.
- Owned production support and incident response, performing root-cause analysis and implementing long-term fixes to prevent recurrence..

Samay Systems LLC *Feb 2025 – Jun 2025*
Senior Backend Engineer (Microservices & Integrations)

- Built Java Spring Boot services to integrate multiple internal and external systems into a cohesive platform.
- Designed event-driven pipelines using Kafka to handle asynchronous processing and system-to-system communication.
- Implemented service-level monitoring, logging, and alerting to meet uptime and reliability expectations.
- Collaborated closely with product and business teams during the discovery phase, shaping high-level designs and delivery plans.

- Provided technical leadership by reviewing proposed solutions, offering architectural guidance, and mentoring junior engineers.

Arvam Tech *Jul 2023 – Jan 2025*
Enterprise Automation Engineer

- Developed and maintained Spring-based microservices supporting enterprise workflows.
- Designed APIs and backend services with clear separation of concerns, enabling independent service evolution.
- Integrated NoSQL databases to support scalable data access patterns across distributed services.
- Partnered with QA and product teams to ensure features were delivered on time with appropriate test coverage.

RHYM Tech *Aug 2022 – May 2023*
Associate solutions Engineer

- Built backend services in Java and Spring to support platform features.
- Implemented message-based communication patterns to support asynchronous processing.
- Participated in code reviews and design discussions, improving system reliability and maintainability.

ZeMoSo Technologies *Jul 2021 – Aug 2022*
Associate Developer

- Developed backend components using Core Java and Spring.
- Assisted in building service integrations and database interactions.
- Gained hands-on experience with enterprise development practices, testing, and deployment workflows.

Projects

Enterprise Microservices Platform – CIFC
Problem: Monolithic systems limited scalability and slowed feature delivery.
Solution: Designed Spring Boot microservices with Kafka-based communication and NoSQL persistence for scalable, resilient operations.
Event-Driven Backend Services – Samay Systems
Problem: Tight coupling between systems caused cascading failures.
Solution: Introduced Kafka-driven async processing and service isolation to improve reliability and throughput.

Education

Master's in Computer Science, Oklahoma State University, Stillwater, OK *May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India *Jun 2021*
