Neel Gali

Software Engineer

neelgali7@gmail.com | +1(475)-291-1455

Summary

- Software Engineer with 3+ years of experience delivering user-facing web applications and cloud-backed services at scale.
- Proven ability to design, build, test, and operate reliable, secure, and performant applications that abstract complex customer workflows into intuitive user experiences.
- Experienced working end-to-end across frontend, backend, and cloud infrastructure, collaborating closely with product managers, UX designers, and partner engineering teams to ship high-quality features with speed and consistency.

Skills

Frontend: HTML5, CSS3, JavaScript, TypeScript, React
Backend: Python, C#, Java, RESTful APIs
Cloud Platforms: Microsoft Azure (App Services, Functions, Storage), AWS (S3, Lambda, EC2, CloudWatch, Terraform)
Web & Application Engineering: Responsive UI, accessibility fundamentals, client–server architecture
Engineering Practices: Modular design, reusable components, code reviews, automated testing, CI/CD
Reliability & Operations: Monitoring, logging, incident response, live-site support
Data & Visualization: SQL, application telemetry, dashboards, basic data visualization patterns

Professional Experience

Epic Solutions *Jul 2025 – Present*
Software Engineer II
Cloud-Backed Web Applications

- Delivered end-to-end user-facing features by designing React-based UI components backed by scalable cloud APIs, enabling customers to complete core workflows efficiently.
- Built reusable frontend and backend components to reduce duplication and improve consistency across features, accelerating delivery while maintaining quality.
- Designed and implemented RESTful services in Azure to support UI workflows, focusing on low latency, fault tolerance, and secure data access.
- Instrumented applications with telemetry and monitoring to understand user behavior, detect regressions, and guide iterative improvements based on real usage data.
- Partnered with product managers and UX designers to translate customer needs into well-scoped engineering tasks and intuitive, accessible user experiences.
- Operated services in production by participating in on-call rotations, diagnosing issues, and implementing post-incident improvements to enhance reliability.

Samay Systems LLC *July 2024 – Jun 2025*
Software Engineer I
Product Engineering & Automation Team

- Developed modern web application features using HTML5, CSS, JavaScript/TypeScript, and React, ensuring responsive design and cross-browser compatibility.
- Implemented backend APIs and data access layers to support UI-driven workflows, balancing correctness, performance, and maintainability.

- Applied clean, modular design principles to break down complex requirements into composable components that were easy to test and evolve.
- Contributed to code reviews, automated testing, and CI/CD pipelines, improving code quality and reducing defects reaching production.
- Collaborated across engineering teams to integrate shared services and deliver cohesive user experiences across product boundaries.

Monarch Tractor *Jun 2023 – Aug 2023*
SDE Intern
Enterprise Cloud Services

- Prototyped web and service components supporting customer-facing applications, gaining hands-on experience with full-stack development.
- Implemented UI enhancements and backend integrations to improve usability and reliability of internal tools.
- Supported production deployments by validating application behavior, monitoring early usage signals, and addressing issues discovered after release.

ZeMoSo Technologies *Jul 2021 – Aug 2022*
Associate Developer
Biotech LabOps

- Designed and implemented backend APIs supporting high-volume application workflows, emphasizing correctness, performance, and security.
- Built data-backed features that required efficient querying, transformation, and response-time guarantees under concurrent access.
- Worked closely with frontend engineers to ensure backend systems supported accessible, responsive user experiences, including predictable latency and clear error semantics.
- Participated in on-call support and post-incident analysis, strengthening skills in debugging, root-cause analysis, and long-term fixes.
- Participated in system debugging and production support, strengthening operational reliability.

Projects

Customer Workflow Web Portal

- Designed and implemented a web portal that abstracted complex backend processes into a simple, task-oriented UI, improving customer efficiency and reducing support requests.
- Built reusable React components and cloud APIs to support rapid feature iteration while maintaining consistency and reliability.

Application Monitoring & Insights Dashboard

- Developed dashboards to visualize application health, usage patterns, and error trends, enabling teams to identify issues early and prioritize improvements.
- Integrated telemetry from frontend and backend services to provide a holistic view of user experience and system performance.

System Health & Monitoring Framework

- Built a Python-based monitoring layer to track latency, error rates, and throughput.
- Enabled faster incident diagnosis and improved overall system stability.

Education

Master's in Computer Science, Oklahoma State University, Stillwater, OK *May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India *Jun 2021*
