Neel Gali

Software Engineer, AI Tools

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Languages: Python, TypeScript, JavaScript, Swift, Java, SQL, Bash
AI/ML: LLM APIs, RAG, Prompt Engineering, Vision Models, Multimodal Workflows, Model Evaluation, MLOps, Responsible AI
Frontend: React, TypeScript, SwiftUI, Xcode, WebSockets, Data Visualization, Internal Tooling
Backend: FastAPI, Flask, REST APIs, Async Workers, Task Queues, Redis, Microservices, OpenTelemetry
Data/Search: PostgreSQL, Pinecone, pgvector, Elasticsearch, Metadata Pipelines, Image/Video Data Workflows
Cloud/DevOps: AWS Lambda, SQS, S3, ECS, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD, Observability

Professional Experience

Software Engineer AI *Jun 2025 - Present*
Epik Solutions | Enterprise Security AI Platform

- Built **Python FastAPI** services and **React/TypeScript** internal tools that catalog high-volume security telemetry, model outputs, and analysis artifacts for engineering and operations teams.
- Designed **LLM-powered query interfaces** over large operational datasets using **RAG**, **Pinecone**, prompt templates, and structured output validation, reducing manual investigation time by 40%.
- Implemented asynchronous analysis workflows with **AWS SQS**, background workers, and retry-safe job state tracking, enabling long-running AI enrichment jobs to run reliably across bursty workloads.
- Integrated production **LLM** and **multimodal AI** features with evaluation checks for groundedness, latency, and failure modes, balancing quality, cost, and maintainability before release.
- Built real-time **React** dashboards with streaming status updates, drill-down metadata views, and regression indicators used by partner teams to review model behavior and operational trends.
- Improved service operability with **OpenTelemetry**, structured logs, alerting, and CI quality gates, sustaining 99.9% uptime for daily tools used by enterprise engineering and security teams.

Software Engineer (Full Stack AI) *Jul 2024 - Jun 2025*
Samay Systems LLC | B2B SaaS Compliance AI Platform

- Owned end-to-end product features across **React**, **Python REST APIs**, and data models for a multi-tenant AI compliance SaaS platform serving 15+ enterprise customers.
- Built **RAG** pipelines over audit evidence, cloud metadata, and policy documents using vector search, retrieval ranking, and context-window management for natural-language Q&A workflows.
- Developed **agentic workflows** that collected evidence, summarized control gaps, and routed human review steps, reducing manual auditor effort by 70% while preserving explainable outputs.
- Designed async ingestion and scoring jobs with **AWS Lambda**, **SQS**, **PostgreSQL**, and idempotent retries to process long-running compliance analyses without blocking user workflows.
- Partnered with product, customer success, and compliance leads to turn ambiguous audit workflows into reliable internal tools, documentation, dashboards, and release-ready APIs.
- Added model-version tracking, prompt regression datasets, and cost/latency dashboards for AI features, preventing quality regressions during weekly production releases.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*
Monarch Tractor | Autonomous Vehicle Perception

- Built **Python** preprocessing pipelines for image, sensor, and telemetry datasets used in perception model training, converting raw field data into validated, training-ready artifacts.
- Evaluated **computer vision** models with **PyTorch**, **TensorFlow**, and **OpenCV**, analyzing model outputs against operational constraints for real-world autonomous systems.

Software Engineer *Jul 2021 - Aug 2022*
ZeMoSo Technologies | LabOps / Scientific Workflow Platform

- Built full-stack scientific workflow tools using **React**, **Python/Java** REST APIs, and **PostgreSQL**, supporting experiment tracking, sample metadata, and analysis workflows for 500+ scientists.
- Developed async upload and validation services for large experiment files and metadata records, decoupling long-running processing from user-facing screens and reducing failed submissions.
- Implemented data cataloging workflows for experiment artifacts, metadata, and analysis outputs, helping scientists trace datasets from capture through review and downstream reporting.
- Built partner-facing dashboards that surfaced pipeline status, validation errors, and quality metrics, reducing back-and-forth between engineering, research, and QA teams during release cycles.
- Added retry-safe background processing and audit logs for long-running scientific analyses, improving reliability and debuggability for workflows used by research and quality stakeholders.
- Designed searchable metadata views and optimized database queries for experiment reports, cutting report generation time by 30% across regulated LabOps workflows.
- Authored automated tests and CI quality gates for scientific data workflows, improving correctness, traceability, and release confidence for tools used by research and quality teams.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India *Jul 2017 - Jun 2021*
