Neel Gali

Software Engineer
neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Languages: Python, TypeScript, JavaScript, Ruby, SQL, Go, Java, Bash
AI Product: LLMs, RAG, Agentic Workflows, AWS Bedrock, Azure OpenAI, Evals, Guardrails, Vector Search
Frontend/Product: React, TypeScript, Next.js, Customer Workflows, Prototyping, Product Metrics, UX Iteration
Backend/Data: Rails, FastAPI, Node.js, GraphQL, REST APIs, PostgreSQL, Redis, Queues, Microservices
Cloud/Delivery: AWS, Docker, Kubernetes, Terraform, GHA, CI/CD, CloudWatch, Prometheus, Grafana
Ownership: 0-to-1 Products, Customer Discovery, Design Partnership, Privacy, Security, Observability, Agile

Professional Experience

Software Engineer AI *Jun 2025 - Present*

CIFC Asset Management | Enterprise Security AI

- Converted noisy **security alerts, logs, and tickets** into a 0-to-1 AI incident triage workflow that produced prioritized summaries, cited evidence, confidence scores, and recommended actions.
- Built the product surface with **React, TypeScript, Python, REST APIs, PostgreSQL, Redis, and AWS**, giving operators a single workflow for review, approval, escalation, and audit history.
- Designed the **RAG, prompt-versioning, and evaluation layer** for duplicate detection, severity reasoning, remediation guidance, and regression testing across incident categories.
- Implemented **RBAC, least-privilege service access, source citations, human approval queues, and structured audit logs** to protect sensitive enterprise security data.
- Instrumented queue depth, LLM latency, failure modes, and operator decisions with CloudWatch, Prometheus, and Grafana, reducing repeat triage cycles by **35%**.
- Packaged reusable AI service patterns for retrieval, workflow state, guardrails, telemetry, and error handling so adjacent teams could ship AI features on the same foundation.
- Accelerated delivery with **Cursor, Claude, GitHub Copilot, and Codex** while enforcing code review, automated tests, eval checks, and production rollback plans.

Founding Engineer (Full Stack AI) *Jul 2024 - Jun 2025*

Samay Systems LLC | B2B SaaS Compliance AI Platform

- Engineered a **B2B Compliance AI SaaS product** using Python, TypeScript, GraphQL, Lambda, ECS, SQS, PostgreSQL, and Neo4j for **15+ enterprise clients**.
- Modeled policies, evidence, cloud controls, tickets, and documents into a structured compliance graph, enabling AI workflows to return audit-ready answers with traceable sources.
- Built **agentic evidence-review workflows** with AWS Bedrock, Azure OpenAI, LangChain, tool-calling agents, vector search, and eval datasets, cutting manual review effort by **70%**.
- Shipped customer-facing iterations from discovery through design tradeoffs, API/data modeling, implementation, demos, production fixes, and post-launch measurement.
- Added analytics for **AI job latency, queue failures, evidence coverage, and automation gaps**, giving teams a release-readiness view before customer rollouts.
- Implemented tenant isolation, RBAC, audit logging, CI/CD gates, and environment promotion so AI features could ship quickly without weakening customer trust.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*

Monarch Tractor | Autonomous Systems & Workflow Automation

- Built **Python telemetry pipelines** that transformed image, sensor, and field-operations data into validated ML artifacts for labeling, analysis, and downstream model workflows.
- Automated identity, device, data-quality, and field-operations checks across UKG, JumpCloud, and Azure AD-style systems, reducing provisioning and validation time by **80%**.

Software Engineer *Jul 2020 - Aug 2022*

ZeMoSo Technologies | LabOps / Regulated Workflow SaaS

- Delivered LabOps workflows in **React, TypeScript, Ruby on Rails, Java Spring Boot, and PostgreSQL** for inventory, sample lineage, scheduling, uploads, and experiment tracking used by **500+ scientists**.
- Built **REST APIs, role-based workflows, audit logs, and validation checks** that improved reliability across regulated scientific data capture and approval flows.
- Optimized backend jobs and SQL queries for high-volume sample events, reducing repeated timeout/debug cycles in daily lab operations.
- Developed **React/TypeScript operational dashboards** for sample queues, upload failures, inventory exceptions, and experiment blockers, reducing support handoffs for lab users.
- Implemented background job retries, validation rules, and failure-state reporting for file uploads and sample lineage workflows, improving recoverability in production paths.
- Added deployment checklists, feature validation notes, and release smoke tests for regulated workflows so QA and infrastructure teams could verify changes consistently.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
