Professional Experience

Software Engineer *Jul 2025 - Present*

Epik Solutions | Enterprise SaaS Platform

- Architected **Rails** RESTful API for the enterprise SaaS platform, defining data models, endpoint contracts, and **JWT** authentication that scaled to 20,000+ daily active users reliably.
- Built **Python FastAPI** data ingestion service with **Pydantic** schema validation and async **SQLAlchemy**, enforcing end-to-end correctness guarantees across 10,000+ daily document uploads without schema drift.
- Built **Sidekiq** background job system with priority queues, dead-letter routing, and retry logic, processing 50,000+ async tasks daily and guaranteeing at-least-once delivery on every job.
- Introduced **Apache Kafka** as the event streaming backbone for async service decoupling, enabling replay-safe data pipelines that ingested 100K+ events per minute without message loss.
- Diagnosed **N+1** query regressions and added composite **PostgreSQL** indexes with eager loading, cutting average API response time by 65% and establishing query performance baselines platform-wide.
- Authored zero-downtime **PostgreSQL** migration playbooks using the expand-contract pattern, decoupling schema changes from deploys and enabling safe column removals across the live production SaaS database.
- Deployed **Prometheus** and **Grafana** observability on Rails and Python services, tracking request throughput, error rates, and p99 latency to support on-call triage and capacity planning.

Software Engineer *Jul 2022 - Jun 2025*

Samay Systems LLC | B2B Compliance Platform

- Owned backend and **data platform** for a B2B compliance SaaS, shipping product releases on schedule and serving 10,000+ enterprise users with consistent data correctness guarantees.
- Migrated 3M+ **PostgreSQL** records from a single-schema **Rails** app to per-tenant schema isolation, eliminating cross-tenant data leakage and satisfying all enterprise **SOC 2** compliance requirements.
- Built **Python Celery** task queue with **Redis** broker, priority lanes, and dead-letter retries, processing 200K+ daily background jobs with durable delivery and observable failure recovery.
- Designed idempotent Python task handlers with **Redis** deduplication keys, guaranteeing exactly-once **Celery** job processing under retries and eliminating duplicate compliance record writes on worker restarts.
- Refactored compliance services from synchronous **Python** to **asyncio** with **httpx**, enabling concurrent third-party regulatory API calls and cutting external validation round-trip latency by 55 percent.
- Integrated **Elasticsearch** on the compliance data platform, indexing 5M+ regulatory documents and reducing document lookup latency from 8 seconds to under 300ms for compliance officers.
- Introduced **Redis** caching for compliance lookups and **Rails** sessions, reducing **PostgreSQL** read load by 60% and cutting API response time by 45% at peak traffic.
- Introduced **LaunchDarkly** feature flags to decouple backend feature rollouts from deploys, enabling dark launches of compliance features and reducing production incidents caused by big-bang integrations.
- Deployed **Rails** to **AWS EKS** with **Docker** and **Kubernetes**, configuring rolling deployments, autoscaling, and health checks that maintained 99.9% uptime across all compliance platform services.

Software Engineer *Jul 2020 - Aug 2022*

Zemoso Technologies | LabOps Platform

- Built **Ruby on Rails** features from scratch for a LabOps SaaS, authoring CRUD interfaces, REST endpoints, and **ActiveRecord** models for multi-step laboratory sample processing workflows.
- Built **Python pandas** transformation pipelines for lab reporting, processing 500K+ monthly records with automated QC rules and cutting researcher manual data preparation time by 50%.
- Built **Python** ETL jobs exporting lab datasets to **AWS S3** as **Parquet** files, enabling downstream analytics and cutting ad-hoc production **PostgreSQL** query load by 40%.
- Authored optimized **PostgreSQL** queries and **ActiveRecord** scopes for lab sample tracking, reducing report generation time by 30% through targeted index tuning and query planning improvements.
- Configured **GitHub Actions** CI/CD for Rails and Python services, running **RSpec**, **pytest**, and **Rubocop** on every PR and automating **Heroku** staging deployments for continuous releasability.

Skills

Languages: Ruby, Python, SQL, JavaScript, TypeScript, Bash
Frameworks & Tools: Ruby on Rails, FastAPI, Pydantic, SQLAlchemy, pandas, asyncio, httpx, Sidekiq, Celery, Kafka, LaunchDarkly, RSpec, pytest, Rubocop
Cloud & Infra: AWS, Azure, Redis, Elasticsearch, Docker, Kubernetes, GitHub Actions, Prometheus, Grafana
Concepts: REST, JWT, OAuth2, RBAC, multi-tenancy, event streaming, idempotency, exactly-once delivery, feature flags, zero-downtime migrations, data correctness, observability, CI/CD

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
