Professional Experience

Software Engineer *Jul 2025 – Present*

Epik Solutions | Enterprise Security Automation

- Built high-throughput **Python** and **FastAPI** backend services for enterprise security automation, processing over 1M daily security events with 99.9% uptime and sub-100ms API response times.
- Designed **Python LangGraph** and **Azure OpenAI**-powered agentic workflows to automate security triage and compliance reporting, substantially reducing manual analyst overhead across enterprise operations by 40%.
- Architected real-time **Kafka** data pipelines in **Python** to ingest and process distributed security event streams, enabling accurate operational reporting and full auditability across monitoring infrastructure.
- Built distributed **AI agents** using **MCP tool calling** and **LangChain** to automate recurring security audit workflows, cutting manual analyst overhead by 35% across enterprise operations.
- Translated stakeholder requirements into **GraphQL** APIs and scalable **Python** backend services powering security compliance reporting dashboards, improving data accuracy and cross-team operational efficiency by 25%.
- Monitored distributed **Python** microservices using **Prometheus** and **Grafana**, proactively diagnosing complex performance bottlenecks and ensuring consistently high long-term availability and auditability for security automation pipelines.

Software Engineer *Jul 2024 – Jun 2025*

Samay Systems LLC | B2B SaaS Compliance Startup

- Owned end-to-end **Python** backend modules for an early-stage **B2B SaaS** compliance startup, building audit-ready data pipelines serving enterprise finance clients with full feature lifecycle ownership.
- Engineered high-performance **Python** and **FastAPI** RESTful backend services for real-time compliance data exchange, achieving sub-100ms latency and 99.9% system reliability across 50K concurrent enterprise users.
- Integrated **OpenAI API** into **Python** compliance data pipelines to generate **AI-driven** risk summaries, reducing manual analyst review time and improving regulatory decision-making accuracy by 20%.
- Optimized **PostgreSQL** schemas, query plans, and **Redis** caching layers for large-scale compliance datasets, reducing average report generation times by 25% and enabling real-time analytics dashboards.
- Containerized **Python** compliance services with **Docker** and deployed on **Kubernetes** via CI/CD pipelines, accelerating feature delivery cycles and maintaining high availability across enterprise SaaS deployments.
- Designed **Python** microservices architecture for modular compliance feature delivery, enabling independent team scaling and rapidly iterating on new product features as an early-stage startup engineer.

Software Development Engineer Intern *Jul 2023 – Aug 2023*

Monarch | Semi-Autonomous Agricultural Vehicles

- Supported **Python** backend development for production environments powering **semi-autonomous agricultural vehicles**, enabling reliable real-world field operations and onboard sensor data telemetry collection for the team.
- Integrated vehicle sensor data streams into backend processing services, building robust **Python** pipelines that parsed and normalized real-time telemetry payloads for autonomous navigation decision systems.

Associate Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | Cloud-Based Scientific Operations

- Developed **Python** backend services and **RESTful APIs** for a cloud-based scientific operations platform, enabling research teams to trace experiments and biological samples with 99.8% uptime.
- Optimized **SQL** queries and **PostgreSQL** schemas for large-scale scientific data storage, reducing response times for critical laboratory traceability services and complex analytical queries by 30%.
- Contributed to cloud-based **Python** microservices on **AWS EC2**, deploying backend services for scientific operations and ensuring 99.8% uptime and security compliance for sensitive laboratory data.
- Built **Python** data processing workflows for large scientific datasets, reducing report generation time by 80% and improving operational efficiency across experiment and sample analysis pipelines.
- Containerized **Python** services with **Docker** for client laboratory applications, integrating with third-party scientific tools and increasing data throughput for sample and experiment tracking by 20%.

Skills

Languages: Python, SQL
Frameworks & Tools: FastAPI, LangGraph, LangChain, Azure OpenAI, OpenAI API, Kafka, GraphQL, Prometheus, Grafana, Docker, Kubernetes
Cloud & Infra: AWS, EC2, PostgreSQL, Redis
Concepts: Distributed Systems, Data Pipelines, Microservices, RESTful APIs, CI/CD, AI Agents, MCP Tool Calling, Agentic AI Workflows, Real-time Processing, Scalability

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
