Lohit Gali

lohitgali@gmail.com

Summary

Computer Science Engineer with overall 5+ years experience in front-end develpment,, backend development, DevOps and Cloud working across multiple startups. Skilled in **Python**, **SQL**, **Java**, **React**, **MongoDB**, and CI/CD tools like **Docker, Kubernetes, Jenkins** and cloud providers including **Azure, GCP, AWS**. Adept at building scalable web applications, and high performance software solutions

Skills

Programming Languages: **Java**, Ruby, **Python**, C#, C++, SQL
Operating Systems: Linux, Unix, Windows, macOS
Databases: **MySQL, MongoDB,** PostgreSQL, Oracle
Web Technologies: HTML, CSS, JavaScript, jQuery
Frameworks: **Spring Boot, React.js, Node.js, Angular,** Express.js, Django
Cloud Technologies: AWS (S3, EC2, RDS, Lambda, Redshift, EKS, ECS, CloudWatch), Azure AD
Tools and Methodologies: Docker, Kubernetes, Jenkins, Github Actions, Git, Jira, GitHub, Selenium, Postman, Maven, TDD, SDLC, Agile, Scrum, Kanban

Education

Master's in Computer Science, Oklahoma State University - Stillwater, OK — May 2024
Bachelor's in Computer Science, Jawaharlal Nehru Technological University - Hyderabad, India — June 2021

Experience

Full stack Engineer, Arvam Tech – CA — Jul 2023 – present

- Led the development and maintenance of **enterprise asset management (EAM)** solutions, providing scalable, secure, and high-performance applications
- Utilized **React** for frontend development and **Node.js** with **Express** for backend services, implementing RESTful APIs and ensuring seamless integration with the system's database
- Designed and implemented **microservices-based architecture** using **Spring Boot** and **Docker**, streamlining deployment processes and improving system reliability
- Integrated **AWS services** for cloud infrastructure and managed **CI/CD pipelines** with **Jenkins**, automating deployments and enhancing the development workflow
- Enhanced data security and integrity by applying best practices in **encryption, authentication, and authorization**, working closely with the security team to meet compliance standards

Full stack developer, RHYM Tech – Remote, Stillwater, OK — Aug 2022 – May 2023

- Delivered custom web applications and solutions tailored to the unique needs of cybersecurity systems, enhancing the performance and scalability of key tools
- Built secure, **responsive web applications** using **React** and **Node.js**, leveraging **JWT for secure authentication** and OAuth for third-party integration
- Contributed to designing and implementing **real-time data analytics** systems with **Kafka and Splunk** for monitoring network traffic and detecting anomalies
- Enhanced system security by developing **web-based dashboards** for **intrusion detection and security event management**, providing users with visual insights into potential vulnerabilities
- Collaborated with a cross-functional team to integrate **threat detection algorithms** and APIs into existing systems, supporting **penetration testing and vulnerability assessments**

Full stack developer, ZeMoSo Technologies – Hyderabad, India — Jul 2021 – Aug 2022

- Contributed to the development of the Strateos Platform, a remote-controlled AI robotic lab for scientific experiment design, running, and analysis
- Designed **UI components in React** and **RESTful APIs in Ruby on Rails**, collaborating with cross-functional teams in a biotech startup to achieve a 20% increase in user base growth
- Integrated new features for **user roles and permissions management** in Ruby on Rails, using custom Pundit policy scopes to filter data based on user roles and enforcing **Role-Based Access Control (RBAC)**

- Managed complex relational models, Implemented **CRUD operations, structured JSON responses, versioned APIs** and ensured consistent API behavior through comprehensive **request validation and error handling**
- Developed backend services using **Ruby on Rails**, implementing complex data models and **integrating third-party APIs** for experiment management and data analysis
- Optimized **database queries using PostgreSQL**, ensuring seamless access and retrieval of data from the system's relational database

Full stack developer, RHYM Tech – Hyderabad, India Jun 2020 – May 2021

- Developed secure, scalable web applications for **internal cybersecurity tools** and services, ensuring they met high standards for privacy and data protection
- Led frontend development efforts using **Vue.js** for creating interactive UIs and **Node.js** for building robust backend services
- Integrated **OAuth** and **JWT** for secure user authentication, ensuring strict access control and safeguarding data confidentiality
- Utilized **AWS** for cloud-based infrastructure and deployed microservices using **Docker** containers, enhancing the deployment pipeline and reducing downtime
- Contributed to ongoing code reviews, ensuring the implementation of secure coding practices and adherence to best practices

Projects

Enterprise Asset Management (EAM) Solution – Arvam Tech

- **Problem**: The firm required a scalable, secure, and high-performance web-based solution for managing and tracking enterprise assets in real-time
  Solution: Led the development of a robust **EAM solution** using **React** for frontend development and **Node.js** with **Express** for backend services. Implemented RESTful APIs for seamless communication between the system and its database, ensuring smooth asset tracking, reporting, and management

Permissions Management System for Sensitive Data Access – ZeMoSo Technologies

- **Problem**:The platform required a secure and flexible permissions management system to handle varying user roles with different levels of access to sensitive experimental data.
  Solution: Assisted in developing a **permissions management system** using **Ruby on Rails**, ensuring robust security protocols for handling multiple user roles. This system allowed for precise control over who could access and modify experimental data, improving data security and compliance

Custom Web Application for Cybersecurity Systems – RHYM Tech

- **Problem**: The cybersecurity firm required a custom web application to enhance the performance and scalability of their monitoring tools, specifically in real-time threat detection and data visualization
  Solution: Developed secure and **responsive web applications** using **React and Node.js**, implementing **JWT** for secure authentication and OAuth for third-party integrations. The applications provided seamless user experiences for monitoring network traffic and detecting anomalies, supporting the firm's cybersecurity initiatives
