Professional Experience

Senior Software Engineer *Jul 2025 – Present*

Epik Solutions | AI-Powered Enterprise Solutions

- Led development of an **AI-powered** agentic system using **LangGraph** and **OpenAI API** to automate complex workflows, reducing manual processing by 40% across 5 enterprise clients.
- Designed and implemented scalable **RAG** (Retrieval Augmented Generation) pipelines with **Pinecone vector store** on **AWS Lambda** for dynamic context retrieval, improving answer relevance by 35%.
- Developed an automated **eval harness** using **Langfuse** and custom **Python** scripts, establishing golden datasets to monitor LLM quality and detect regressions 90% faster.
- Implemented robust **data governance** and **PII** masking strategies for **external LLM APIs** on **AWS Glue**, ensuring 100% compliance with strict privacy regulations.
- Architected and deployed critical **context pipelines** for real-time **product data** assembly using **Kafka** and **AWS S3**, achieving 99.9% data availability for LLM inference.
- Collaborated closely with **AI Product Manager** on feature ideation and implementation, delivering 3 key **AI-powered** features within first 6 months with 100% on-time delivery.

Software Engineer *Jul 2022 – Jun 2025*

Samay Systems LLC | FinTech Data Platform

- Developed and maintained high-performance **Python** and **Java Spring Boot RESTful APIs** for financial data processing, handling 10M daily requests with 99.9% uptime.
- Implemented scalable **ETL pipelines** using **AWS Glue** and **Python** for ingesting complex financial datasets into **PostgreSQL** and **DynamoDB**, reducing processing time by 30%.
- Integrated **OpenAI API** for text summarization and sentiment analysis within a secure internal **Python** application, improving data insight generation by 20% post-November 2022.
- Designed and deployed containerized **microservices** with **Docker** and **AWS EC2**, optimizing resource utilization and achieving a 20% reduction in operational overhead.
- Built robust **async systems** using **Kafka** for real-time data streaming and event processing, ensuring data consistency across 5 interdependent financial applications.
- Managed and optimized **PostgreSQL** and **DynamoDB** production databases, implementing schema migrations and performance tuning that improved query speeds by 15%.
- Automated deployment processes using **Jenkins** and **CI/CD** pipelines for multiple services on **AWS**, increasing release frequency by 40% and reducing manual errors by 90%.
- Conducted thorough **cost and latency tradeoffs** analysis for new features, ensuring optimal performance and budget adherence while integrating new third-party APIs with a 10% saving.

Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | Enterprise SaaS Platform

- Developed core backend services using **Java Spring Boot** and **RESTful APIs** for an enterprise SaaS platform, supporting over 50,000 active users with 99.95% uptime.
- Designed and implemented scalable database schemas in **PostgreSQL** and **MySQL**, optimizing complex queries to reduce response times by 20% for critical reporting features.
- Deployed and managed applications on **AWS EC2** and **AWS S3**, leveraging **Docker** for containerization to ensure consistent environments across development and production.
- Contributed to a modular **microservices** architecture, enhancing system scalability and maintainability, which allowed for a 30% faster integration of new client features.
- Implemented secure authentication and authorization mechanisms using **JWT** and **RBAC**, protecting sensitive user data and achieving 100% compliance with security audits.
- Automated software build and deployment processes using **Jenkins** and **Git** for **CI/CD**, accelerating release cycles by 25% and improving code quality.

Skills

Languages: Python, Java, SQL
Frameworks & Tools: LangGraph, Langfuse, OpenAI API, Docker, Kafka, Jenkins, Git, Spring Boot, RESTful APIs
Cloud & Infra: AWS, AWS Lambda, AWS S3, AWS Glue, AWS Fargate, AWS EC2, AWS RDS, CI/CD, Async Systems, Microservices, PostgreSQL, DynamoDB, Pinecone
Concepts: API Design, Data Governance, PII Management, Eval Harness, RAG, Agentic Systems, Function Calling, Structured Outputs, Context Pipelines, Cost and Latency Tradeoffs, JWT, RBAC
AI Tools: LangGraph, Langfuse, OpenAI API

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
