Neel Gali

Software Engineer | Platform, AI & Security

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Languages: Java, Go, Python, TypeScript, JavaScript, SQL, Bash
Backend: Spring Boot, FastAPI, Flask, Node.js, REST, GraphQL, gRPC, Microservices, Event-Driven Architecture
Data/AI: Kafka, Airflow, Spark, PyTorch, TensorFlow, OpenAI API, AWS Bedrock, LangChain, RAG, MLOps, Evals
Cloud/Infra: AWS Lambda, ECS, S3, SQS, RDS, Docker, Kubernetes, Terraform, GitHub Actions, Jenkins, CI/CD
Databases/Search: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis, Cassandra, Elasticsearch, OpenSearch, Pinecone
Security/Observability: OAuth2/JWT, RBAC, SAST/DAST, Threat Modeling, Prometheus, Grafana, OpenTelemetry, CloudWatch

Professional Experience

Software Engineer AI *Jun 2025 - Present*

Epik Solutions | Enterprise Security Platform

- Built **Go/Python security telemetry microservices**, processing **5M+ daily events** through Kafka, Redis, and PostgreSQL with **99.9% uptime**.
- Developed **Java Spring Boot/FastAPI services** for investigation, policy, and evidence workflows using clean API contracts and regression tests.
- Instrumented distributed services with **OpenTelemetry, Prometheus, and Grafana**, reducing **mean incident detection time by 40%** across production systems.
- Built **React/TypeScript operational dashboards** for service health, security workflows, and data quality metrics, giving partners self-service visibility.
- Integrated **LLM/RAG workflows** using AWS Bedrock, OpenAI API, and Pinecone, adding prompt regression tests, latency tracking, and fallback paths for production AI features.
- Implemented secure platform controls including **OAuth2/JWT, RBAC**, secret handling, and vulnerability triage, aligned with **secure SDLC** practices.

Software Engineer (Full Stack AI) *Jul 2024 - Jun 2025*

Samay Systems LLC | B2B SaaS Compliance AI Platform

- Designed **multi-tenant backend systems** using Java Spring Boot, Go, Python, AWS Lambda, ECS, SQS, and PostgreSQL, serving **15+ enterprise clients** with strict tenant isolation.
- Built **Kafka/Airflow data pipelines** to ingest cloud, audit, and application metadata for reporting, ML evaluation, and downstream analytics.
- Productionized **AI-assisted compliance workflows** using PyTorch/TensorFlow prototypes, LangChain, and model-version tracking, reducing manual evidence review by **70%**.
- Created **React/TypeScript and GraphQL applications** for evidence management, document review, policy authoring, admin configuration, and operator workflows.
- Built **platform APIs and deployment tooling** for feature flags, schema migrations, and environment promotion, reducing release coordination by **25%**.
- Improved reliability with **idempotent consumers, retry queues, dead-letter handling**, cache tuning, and Grafana/CloudWatch alerts, cutting production support issues by **35%**.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*

Monarch Tractor | Autonomous Vehicle Perception

- Built **Python preprocessing pipelines** for image, sensor, and telemetry datasets used in perception model training, converting raw field data into validated artifacts.
- Evaluated **computer vision models** with **PyTorch, TensorFlow, and OpenCV**, analyzing quality regressions and operational edge cases for autonomous systems.

Software Engineer *Jul 2020 - Aug 2022*

ZeMoSo Technologies | LabOps / Scientific Workflow Platform

- Built **full-stack scientific workflow tools** using React, Java/Python REST APIs, and PostgreSQL for experiment tracking, sample metadata, and analysis workflows for **500+ scientists**.
- Developed **async upload, validation, and background-processing services** for large experiment files, decoupling long-running processing from user-facing screens.
- Implemented **Java Spring Boot APIs** for inventory, sample lineage, and experiment status workflows, standardizing service contracts across **10+ LabOps modules**.
- Built **React/TypeScript dashboards** for validation errors, pipeline status, and experiment review queues, giving research and QA teams faster visibility into blocked workflows.
- Added **data quality checks, audit logs**, and retry-safe processors for scientific metadata changes, improving traceability across regulated datasets.
- Designed **event-driven job telemetry and operational alerts** for LabOps pipelines, improving failure triage across upload, validation, analysis, and reporting services.
- Optimized **schemas, indexes, and query paths** for experiment reports and metadata search, reducing slow report generation by **30%**.
- Authored **automated tests, CI quality gates, and release checks** for scientific data workflows, reducing production regressions.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
