Lohit Gali

Software Engineer, Epic Integrations

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Software Engineer with 3+ years of professional software engineering experience, specializing in building integrations with Epic and deep familiarity with Epic's integration tools and workflows like Bridges and FHIR interfaces. Proven full-stack capacity with strong backend experience in Node.js and TypeScript, comfortable with frontend frameworks, thriving in a rapid iteration startup environment.

TECHNICAL SKILLS

Programming Languages: Node.js, TypeScript, Python, SQL

Frameworks & Libraries: React, Express.js, frontend frameworks, Vue.js

Epic Integrations & Healthcare Standards: Epic's integration tools and workflows, Bridges, FHIR interfaces, Chronicles, HL7v2, DICOM, CCD/CCDA

Cloud & DevOps: GCP, Docker, Kubernetes, continuous delivery, modern DevOps practices, GitHub Actions

Databases: PostgreSQL, MongoDB

PROFESSIONAL EXPERIENCE

Senior Software Engineer, Epic Integrations | Epik Solutions

Jun 2025 - Present

• Led the design and implementation of critical new integrations with Epic, utilizing Bridges and FHIR interfaces, enabling seamless data exchange for clinical workflows and improving patient data accessibility by 40% for healthcare providers.

• Architected and developed a full-stack greenfield application using Node.js and TypeScript for the backend and React for the frontend, taking ownership end-to-end, which reduced manual data entry by 30% for administrative staff.

• Established robust data synchronization pipelines with Epic's integration tools and workflows, ensuring data integrity and real-time updates for over 10,000 patient records daily, directly supporting continuous delivery initiatives.

• Conducted advanced technical conversations with internal and external stakeholders, including Epic representatives, to define integration requirements and ensure alignment with healthcare domain standards like HL7v2 and CCD/CCDA.

• Implemented modern DevOps practices for automated testing and deployment of Epic integration modules on GCP, reducing deployment time by 50% and improving system reliability for critical healthcare applications.

• Provided mentorship and technical guidance to junior engineers on best practices for building integrations with Epic and maintaining strong fundamentals in a rapid iteration startup environment.

Software Engineer, Backend & Cloud | Samay Systems LLC

July 2024 – Jun 2025

• Developed scalable backend services using Node.js and TypeScript to support compliance and audit workflows, processing over 100,000 data points daily and improving data validation accuracy by 25%.

• Designed and implemented RESTful APIs for data collection from various cloud platforms (AWS, Azure) and enterprise APIs, providing structured inputs for downstream applications and enhancing system interoperability.

• Collaborated on establishing new cloud infrastructure on GCP for robust data processing and storage solutions, supporting multi-tenant applications and ensuring high availability for critical business operations.

• Contributed to frontend development using modern frontend frameworks, creating intuitive user interfaces for data visualization and compliance reporting, improving user engagement by 15%.

• Employed modern DevOps practices, including Docker and Kubernetes, to containerize and orchestrate backend services, reducing setup time by 40% for development and production environments.

• Participated in leading technical conversations to translate complex compliance requirements into functional

software specifications, ensuring end-to-end system effectiveness.

Software Engineer Intern | Monarch Tractor

Jun 2023 – Aug 2023

• Developed Python-based scripts for data preprocessing and transformation, preparing large datasets for analysis and improving data readiness by 30% for engineering teams.

• Assisted in the implementation of backend API endpoints using Node.js to support real-time data ingestion from vehicle sensors, contributing to a robust data pipeline.

• Contributed to frontend development efforts, using a modern frontend framework to build internal tools for data visualization and monitoring, enhancing team productivity.

• Gained practical experience with deploying and scaling cloud infrastructure on GCP, assisting in setting up virtual machines and configuring networking for development environments.

• Collaborated with senior engineers in a rapid iteration environment to identify and resolve software bugs, improving application stability and performance.

• Documented API specifications and backend logic, facilitating knowledge transfer and improving onboarding processes for new team members.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 – Aug 2022

• Contributed to the development of backend services using Node.js, enhancing a scientific operations platform by integrating new features for experiment and sample tracking.

• Implemented data validation and enrichment logic within backend pipelines, ensuring high data quality for downstream analytics and improving data consistency by 20%.

• Supported CI/CD pipeline integration, contributing to automated testing and deployment processes for backend services, improving code quality and release efficiency.

• Collaborated with product teams to gather requirements and deliver software solutions in a fast-paced startup environment, focusing on end-to-end functionality.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
