Neel Gali

Software Engineer
neelgali7@gmail.com | +1(475)-291-1455 | Sunnyvale, CA | linkedin.com/in/neelgali

Skills

Languages: Python, Go, SQL, TypeScript, JavaScript, Ruby, Java, Bash
Backend/Data: FastAPI, Rails, Node.js, REST APIs, GraphQL, PostgreSQL, Redis, Queues, Microservices
Cloud/Infrastructure: AWS (Lambda, ECS, SQS), Terraform, Docker, Kubernetes, Prometheus, Grafana
Frontend: React, TypeScript, Material UI, Next.js, Operational Interfaces, Customer Workflows, UX Iteration
AI/ML: RAG, Agentic Workflows, LLM Evaluations, AWS Bedrock, Azure OpenAI, Guardrails, Vector Search
Engineering Practices: Distributed Systems, Event Processing, Caching, Performance Tuning, Automated Testing, Observability, RBAC, Audit Logging

Professional Experience

Software Engineer AI *Jun 2025 - Present*
CIFC Asset Management | Enterprise Security AI

- Owned **Python ingestion services and REST APIs** that validated and routed heterogeneous security alerts, logs, and tickets through PostgreSQL, Redis, queues, and AWS for downstream analysis.
- Engineered **event normalization, entity correlation, and alert deduplication** to prepare heterogeneous security signals for reliable downstream detection and incident triage.
- Improved **Redis-backed queued processing and failure instrumentation** to reuse incident context across jobs and **reduce repeat triage cycles by 35%** while making queue failures diagnosable.
- Designed and owned reusable **AI infrastructure for RAG, prompt versioning, and LLM evaluations**, with regression tests, guardrails, and failure telemetry for severity and remediation workflows.
- Designed **approval-state transitions, RBAC, and traceable audit controls** across review, escalation, and remediation workflows, enforcing least-privilege access and human approvals.
- Built the **React, TypeScript, and Material UI operator workflow** around backend-owned incident state, integrating evidence, confidence scores, approvals, escalations, and audit history through REST APIs.

Founding Engineer (Full Stack AI) *Jul 2024 - Jun 2025*
Samay Systems LLC | B2B SaaS Compliance AI Platform

- Owned **Python and GraphQL services on AWS Lambda, ECS, and SQS** for a multi-tenant compliance platform using PostgreSQL and Neo4j across **15+ enterprise clients**.
- Designed **compliance-graph data modeling and traceable-source retrieval** across policies, evidence, cloud controls, tickets, and documents to produce audit-ready answers.
- Implemented asynchronous **agentic evidence-review workflows** with AWS Bedrock, Azure OpenAI, LangChain, tool-calling agents, vector search, and eval datasets, cutting manual review effort by **70%**.
- Instrumented asynchronous jobs with **queue latency, failure, evidence-coverage, and automation-gap telemetry**, giving engineering teams release-readiness signals before customer rollouts.
- Enforced **tenant isolation across APIs, data access, and background jobs** with RBAC and audit logging, then added CI/CD gates and environment-promotion controls for releases.
- Demonstrated **end-to-end feature ownership** from customer discovery and API/data modeling through implementation and production debugging, using post-launch behavior to prioritize releases.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*
Monarch Tractor | Autonomous Systems & Workflow Automation

- Engineered **Python telemetry pipelines and validated ML artifacts** from image, sensor, and field-operations data for labeling, analysis, and downstream model workflows.
- Automated **cross-system identity and data-quality checks** across UKG, JumpCloud, and Azure AD-style services, **reducing provisioning and validation time by 80%**.

Software Engineer *Jul 2020 - Aug 2022*
ZeMoSo Technologies | LabOps / Regulated Workflow SaaS

- Built **Rails and Java backend services, REST APIs, and PostgreSQL data flows** for inventory, sample lineage, scheduling, uploads, and experiment tracking used by **500+ scientists**.
- Improved **SQL query/index performance and background-job execution** by removing redundant reads and reworking high-volume sample-event processing, reducing timeouts and debugging cycles.
- Designed **validation, controlled retries, and explicit failure states** across regulated data paths, with role-based workflows and audit logs preserving recoverability.
- Developed **React, TypeScript, and Material UI operational dashboards** for sample queues, upload failures, inventory exceptions, and experiment blockers, reducing support handoffs.
- Converted release checks into **repeatable smoke tests and release validation**, giving QA and infrastructure teams consistent coverage of deployment-critical workflow behavior.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
Bachelor's in Computer Science, JNTUH, Hyderabad *Aug 2017 - May 2021*
