Neel Gali

Senior Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Summary

Senior Software Engineer with 5+ years building **full-stack** and **distributed backend** systems on **React**, **Node.js**, **Python**, **Spring Boot**, and **AWS**, progressively integrating **LLM-powered features** and **agentic AI pipelines** into production products to deliver intelligent, scalable applications for 10,000+ enterprise users.

Professional Experience

Senior Software Engineer *Jul 2025 - Present*

Epik Solutions | Enterprise Security Platform

- Engineered **LangGraph**-based AI agent workflows for automated security alert triage and remediation suggestions, integrating **OpenAI GPT-4o** structured outputs into the core product and reducing MTTR by 40% for enterprise SOC teams.
- Built **RAG**-powered search features using **Pinecone** vector database and **LangChain** retrieval chains over enterprise security corpora, improving context-aware search relevance by 38% over keyword-based approaches.
- Built AI evaluation and observability workflows for prompt quality, retrieval precision, hallucination risk, and latency tracking, enabling safer iteration on LLM features before production rollout.
- Developed scalable **Python** and **Node.js** REST API microservices with async processing and **Redis** caching, sustaining 99.9% uptime for 10,000+ daily active enterprise users under peak security event loads.
- Implemented **React.js** front-end real-time streaming UI for LLM-generated security insights, building WebSocket-backed components that cut perceived response wait time by 50% for end users.
- Deployed all services on **AWS** (ECS, Lambda, S3, SQS) with **Docker** and **Kubernetes**, implementing **GitHub Actions** CI/CD pipelines that reduced release cycle time from two weeks to three days.
- Led sprint planning and code reviews across a 6-engineer team, defining AI integration patterns and async API standards adopted across 4 consecutive zero-defect production releases.

Software Engineer II *Jul 2022 - Jun 2025*

Samay Systems LLC | B2B SaaS Compliance Platform

- Architected **Node.js** and **Python** backend microservices with **Spring Boot** REST APIs and **PostgreSQL**, processing 10K+ compliance records monthly across 15+ enterprise tenants with 99.9% uptime SLA.
- Built **React.js** and **TypeScript** front-end modules including multi-step compliance workflows, data grids, and role-based dashboards, improving enterprise user task completion rates by 35%.
- Engineered **Apache Kafka** event-driven pipelines for async inter-service communication, decoupling 6+ microservices and improving platform throughput by 50% under high-load enterprise scenarios.
- Integrated **OpenAI API** into the compliance product for unstructured document summarization and auto-categorization, cutting manual evidence review time by 45% across 10K+ monthly compliance records.
- Built a **LangChain**-powered document Q&A feature backed by **Azure AI Search** vector retrieval, enabling natural language querying over enterprise compliance corpora with 89% retrieval accuracy.
- Designed multi-tenant permission models and audit-ready data flows across React, API, and database layers, strengthening customer trust for SOC 2 and ISO compliance workflows.
- Provisioned **AWS** infrastructure (ECS, RDS, Lambda, S3) and **Azure** services with **Terraform** IaC and **CI/CD** pipelines, enforcing environment parity and reducing deployment errors by 40% across all tenants.
- Delivered **Redis** caching and query optimization across high-traffic compliance API endpoints, reducing average API latency by 45% and meeting all SLA targets for 15+ enterprise clients.

Software Engineer I *Jul 2020 - Aug 2022*

Zemoso Technologies | LabOps Platform

- Built **React.js** front-end modules and async **Spring Boot** REST APIs over **PostgreSQL**, delivering accurate experiment data tracking and inventory management for 500+ scientists across 10+ product modules.
- Designed normalized **PostgreSQL** database schemas and optimized complex SQL queries for scientific experiment workflows, improving data retrieval performance by 30% across 500+ experiment datasets.
- Developed reusable **TypeScript** React component libraries with responsive design and accessibility standards, reducing new-feature UI development time by 25% across the engineering team.
- Collaborated with product managers and scientists to convert ambiguous lab workflows into maintainable full-stack features, improving adoption of experiment tracking tools across research teams.
- Implemented **Spring Security** with role-based access control for a regulated scientific platform, enforcing data isolation across research teams and eliminating unauthorized cross-team data access.
- Authored 100+ **JUnit** and **Jest** automated test cases, resolved critical production defects via systematic debugging and profiling, reducing regression incidents by 35% throughout the platform.

Skills

Programming Languages: Python, TypeScript, JavaScript, Java, SQL, Bash

AI & LLMs: OpenAI API (GPT-4o), LangChain, LangGraph, RAG, Prompt Engineering, Structured Outputs, Vector Search

Front-End: React.js, TypeScript, HTML5, CSS3, WebSockets, REST, GraphQL
Back-End & Frameworks: Node.js, Python (FastAPI/Flask), Spring Boot, Microservices, Apache Kafka, Redis
Databases & Vector Stores: PostgreSQL, MongoDB, Redis, Pinecone, Azure AI Search
Cloud & DevOps: AWS (ECS, Lambda, S3, SQS, RDS), Azure, Docker, Kubernetes, Terraform, GitHub Actions, CI/CD
Tools & Methodologies: Git, JIRA, Jest, JUnit, Agile/Scrum, RESTful API Design, OAuth2/JWT, Spring Security

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
