Neel Gali

Software Engineer | Frontend & Enterprise UX

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Frontend: React, TypeScript, JavaScript, Vue, Redux, HTML/CSS, Tailwind CSS, Vite
UX & Quality: Reusable Components, Responsive Interfaces, WCAG/ARIA, Chrome DevTools, Jest, React Testing Library
Backend & Data: Python, Java, Ruby on Rails, Spring Boot, REST APIs, GraphQL, WebSockets, PostgreSQL, Redis
AI & Delivery: RAG, Agentic Workflows, AWS Bedrock, Azure OpenAI, AWS/Azure, CI/CD, Git, Docker

Professional Experience

Software Engineer AI *Jun 2025 - Present*
Epik Solutions | Enterprise Security AI / Incident Triage

- Built a **React/TypeScript incident-review interface** backed by Python APIs, PostgreSQL, and Redis, consolidating security alerts, evidence, approvals, and escalation into a single operator workflow.
- Translated AI triage output into **prioritized summaries, source citations, confidence scores, and recommended actions**, giving analysts contextual evidence to review before approving remediation.
- Profiled frontend bottlenecks with **Chrome DevTools and Vite**, reducing initial bundle size by **30%** and improving loading performance for real-time enterprise dashboards.
- Integrated **REST APIs and WebSockets** with retrieval services to surface live security events and AI-generated context without fragmenting the analyst's review process.
- Implemented **role-based access, human approval queues, and audit history** across sensitive workflows, connecting user actions to traceable authorization and review decisions.
- Instrumented queue depth, AI latency, failures, and operator decisions to identify workflow bottlenecks, contributing to a **35% reduction in repeat triage cycles**.

Founding Engineer (Full Stack AI) *Jul 2024 - Jun 2025*
Samay Systems LLC | B2B SaaS Compliance AI Platform

- Architected the **React/TypeScript frontend** of a multi-tenant compliance SaaS platform for **15+ enterprise clients**, connecting policy, evidence, and audit workflows to backend APIs.
- Delivered customer-facing features from **discovery and design tradeoffs through implementation, demos, and production iteration**, translating compliance requirements into usable review workflows.
- Integrated **agentic evidence review and RAG** with AWS Bedrock, Azure OpenAI, and a compliance knowledge graph, cutting manual review effort by **70%** while preserving traceable sources.
- Authored architecture decisions and design documentation, then used **usage analytics and customer feedback** to refine product experiences and improve user engagement by **20%**.
- Implemented **tenant isolation, RBAC, audit logging, and CI/CD release gates**, supporting reliable delivery of customer-facing changes across the shared SaaS platform.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*
Monarch Tractor | Autonomous Systems & Workflow Automation

- Developed **Vue/TypeScript components with WCAG 2.1 and ARIA practices** for internal provisioning workflows, contributing to an **80% reduction in provisioning time**.
- Integrated **REST APIs and UI improvements** into ML data-labeling infrastructure, increasing annotation throughput by **20%** for downstream training workflows.

Software Engineer *Jul 2020 - Aug 2022*
ZeMoSo Technologies | LabOps / Regulated Workflow SaaS

- Delivered **React/TypeScript LabOps features** backed by Rails, Spring Boot, and PostgreSQL for inventory, sample lineage, scheduling, and experiment tracking used by **500+ scientists**.
- Implemented **state management across 10+ modules**, maintaining consistent sample and experiment status through complex, multi-step scientific workflows.
- Built **operational dashboards** for sample queues, upload failures, inventory exceptions, and experiment blockers, giving lab users visibility into issues and reducing support handoffs.
- Connected **role-based interfaces to REST APIs, validation checks, and audit logs**, supporting reliable data capture and approval flows in regulated laboratory operations.
- Added **upload validation, background retries, and failure-state reporting**, making sample-data workflows easier to diagnose and recover when processing failed.
- Authored **100+ automated tests** and partnered with QA and product teams on workflow validation, production fixes, and deployment documentation for regulated releases.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
