Professional Experience

Senior Software Engineer *Jun 2025 – Present*

Epik Solutions | Enterprise Security AI Platform

- Architected and shipped agentic AI incident triage pipelines using **Python, n8n, and Azure OpenAI**, processing **1,000+ daily events** and automating **40% of enterprise SOC workflows**.
- Built real-time **React** analytics dashboards aggregating telemetry from **15+ enterprise data systems**, eliminating **20+ manual reporting hours/week** and cutting operational decision latency for C-suite stakeholders.
- Led technical design reviews and sprint planning for a cross-functional **6-engineer AI team**, delivering **4+ agentic features per sprint** with zero critical production regressions consistently.
- Automated cross-functional enterprise operations workflows orchestrating **Power Platform, Logic Apps, Azure Functions, and PowerShell scripting**, serving **500+ users** and cutting operational cycle times by **40%**.
- Deployed **Go** and **Python** microservices on **Azure** using **Docker, Kubernetes, and GitHub Actions**, resolving distributed runbook failures and improving production pipeline success rates by **25%**.
- Integrated **Dynamics 365** and **HaloITSM** APIs into enterprise incident management workflows, enabling automated ticket routing and resolution tracking across **15+ integrated security and IT systems**.

Founding Engineer (Full Stack AI) *Jul 2024 – Jun 2025*

Samay Systems LLC | B2B Healthcare Compliance & Regulatory AI Platform

- Architected and built a **multi-tenant AI SaaS platform** serving **15+ healthcare and enterprise clients**, scaling to **10,000+ users per org** on **AWS** with strict end-to-end tenant isolation.
- Designed and deployed distributed backend systems using **Golang, AWS CDK, Lambda, ECS, PostgreSQL, and Neo4j**, enforcing tenant isolation across relational, graph, and object storage layers.
- Built **LLM-powered workflow automation (AWS Bedrock, LangChain, LangGraph, n8n)** to orchestrate **HL7 FHIR**-aligned regulatory evidence collection and audit control scoring, reducing manual auditor effort by **70%**.
- Developed **GraphRAG** pipelines over **Neo4j** knowledge graphs ingesting **5M+ daily events**, powering **SOC 2** and **HIPAA** compliance chatbots via **Pinecone** vector search, reducing access footprints by **30%**.
- Developed fullstack **React + GraphQL** applications enabling **compliance controls, policy authoring, audit trails**, and document management for **10,000+ users** across regulated healthcare and enterprise workflows.
- Orchestrated nightly identity graph ingestion using **AWS Step Functions** and **Lambda**, modeling enterprise **Entra ID, GitHub, and Jira** data into per-tenant **Neo4j** knowledge graphs automatically.

SDE Intern *Jun 2023 – Aug 2023*

Monarch Tractor | Autonomous Vehicles

- Optimized **CV/ML inference pipelines** for production semi-autonomous tractor fleets using **PyTorch** and **OpenCV**, improving object detection accuracy by **15%** and cutting inference latency by **20ms**.
- Developed features in **Python** and **C++** for an **MLOps data labeling infrastructure** for autonomous navigation systems, improving annotation throughput by **20%** across ML training pipelines.

Software Engineer *Jul 2021 – Aug 2022*

ZeMoSo Technologies | Pharmaceutical LabOps Platform

- Delivered full-stack features for a regulated **pharmaceutical LabOps** platform serving **500+ scientists**, working across **React, Ruby on Rails, Spring Boot**, and **PostgreSQL** in microservices architecture.
- Designed and implemented features across **10+ regulated core product modules** (compound inventory, **LCMS** batch tracking, clinical container linkage), enabling accurate tracking of complex pharmaceutical data.
- Authored **100+ automated test cases** and resolved critical production issues, integrating **Jenkins** CI/CD pipelines to enforce quality checks and promote artifacts in a regulated platform.
- Integrated third-party instrument **APIs** and **LCMS** data parsers into backend services, enabling automated ingestion of raw experimental results and reducing manual data entry by **35%**.
- Designed and optimized **PostgreSQL** schemas and query logic for high-throughput scientific data processing, improving critical data retrieval performance by **40%** across the regulated LabOps platform.

Skills

Languages: Python, Golang, JavaScript, Ruby, SQL, C++, PowerShell
Agentic AI & LLMs: LangGraph, LangChain, AWS Bedrock, Azure OpenAI, RAG, GraphRAG, n8n
Frameworks: React, GraphQL, Spring Boot, Ruby on Rails
Cloud & DevOps: AWS (Lambda, ECS, CDK), Azure, Docker, Kubernetes, GitHub Actions
Databases: PostgreSQL, Neo4j, Pinecone
Tools: Power Platform, Jenkins, PyTorch, OpenCV

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 – May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India *Jul 2017 – Jun 2021*
