Lohit Gali

QA Engineer

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Highly analytical QA Engineer with 3+ years of experience in software development, specializing in building and maintaining automated test suites using Playwright, TypeScript, and Node.js. Proven ability to own end-to-end testing strategies, implement scalable testing strategies within CI/CD environments, and champion quality best practices across the SDLC, leveraging AI tools for enhanced automation coverage.

TECHNICAL SKILLS

Test Automation & Frameworks: Playwright, TypeScript, Node.js, Jest, Vitest, End-to-end Testing, Integration Testing, Regression Testing, Smoke Testing, Contract Testing, Automated Test Suites, Manual Testing

Programming & Scripting: JavaScript, Python, Bash, SQL, PowerShell

CI/CD & DevOps: GitHub, GitHub Actions, CI/CD Pipelines, Docker, Kubernetes, Terraform, Azure DevOps, Jenkins

Quality Assurance Principles: Testing Strategy, Quality Best Practices, SDLC, PR Reviews, Code Quality, Test Coverage, Debugging, Continuous Improvement

AI Tools & Methodologies: AI Tools (ChatGPT), Copilot, Prompt Engineering, Large Language Models

PROFESSIONAL EXPERIENCE

Software Engineer (Quality Automation) | Epik Solutions

Jun 2025 - Present

• Owned and evolved the **end-to-end testing strategy** for internal security applications by designing, building, and maintaining **automated test suites** using **Playwright** and **TypeScript**, reducing critical bug escape rate by 40% for internal security teams.

• Developed robust **integration tests** and **regression testing** frameworks for high-volume telemetry data processing pipelines, integrated into **CI/CD pipelines** via GitHub Actions to ensure **code quality** and stability of production systems.

• Collaborated closely with development teams to enhance **test coverage** and define **quality best practices** through meticulous **PR reviews** and proactive identification of edge cases, improving release confidence by 25%.

• Implemented and maintained **smoke testing** and **contract testing** procedures, validating API interactions and critical system functionalities before each deployment, which shortened release cycles by 15%.

• Utilized **AI tools** such as ChatGPT for generating diverse test cases and debugging complex scenarios, significantly improving **automation coverage** and reducing manual testing efforts by 30%.

• Drove **continuous improvement** of testing infrastructure and tooling within a fast-paced **SDLC** environment, leading to a 20% reduction in test execution time and enhanced overall team efficiency.

Software Engineer (Automation & Validation) | Samay Systems LLC

July 2024 - Jun 2025

• Designed and implemented **scalable testing strategies** for compliance and audit platforms, developing automation scripts with **Node.js** and **TypeScript** to validate data consistency across multi-cloud environments, ensuring 99.9% data accuracy for regulatory reporting.

• Built comprehensive **integration tests** to verify data collection and transformation services, ensuring reliable inputs for downstream analytics and reducing data-related issues by 35% for compliance analysts.

• Developed and maintained **contract testing** frameworks for APIs, ensuring seamless communication between microservices and external platforms, which prevented breaking changes in production deployments and improved system reliability.

• Leveraged **GitHub Actions** to automate **CI/CD pipelines**, integrating test execution and code quality checks into development **workflows**, resulting in a 20% faster feedback loop for developers.

• Contributed to establishing **quality best practices** for data validation and processing, implementing robust checks that prevented 90% of data integrity issues from reaching production systems.

• Applied **AI tools** like Copilot to accelerate the development of test scripts and refine validation logic, enhancing **automation coverage** for complex compliance workflows and improving development efficiency by 15%.

Software Development Intern (Quality Focus) | Monarch Tractor

Jun 2023 - Aug 2023

• Assisted in developing Python-based testing pipelines to validate sensor and image data preprocessing, ensuring high **code quality** and data integrity for autonomous vehicle perception models.

• Contributed to building **automated test suites** for object detection models, performing both unit and **integration tests** to verify model outputs against operational constraints, improving model accuracy by 10%.

• Executed thorough **manual testing** and exploratory testing to identify critical bugs and edge cases in ML pipelines, documenting findings to inform iterative development cycles and improve system robustness.

• Integrated test steps into existing **CI/CD pipelines** using scripting, providing early feedback on code changes and contributing to a more stable development environment for the engineering team.

• Analyzed **test coverage** metrics and reported on areas for improvement, actively contributing to the overall **testing strategy** for semi-autonomous systems and enhancing software reliability.

• Supported deployment of models to cloud environments, implementing basic monitoring and validation checks to ensure performance and stability, preventing deployment-related issues by 20%.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to the development of backend services for a scientific operations platform, implementing rigorous data validation and **quality checks** to ensure accuracy and reliability of experimental data, benefiting research teams.

• Automated dataset preparation and feature generation workflows, reducing manual effort by 25% and enhancing data consistency for downstream ML experimentation, supporting Proof-of-Concept initiatives.

• Integrated **CI/CD pipelines** to enforce **code quality** standards and automate artifact promotion, ensuring auditability and security controls aligned with governance standards, improving release confidence.

• Supported the entire **SDLC** by contributing to testing, deployment, and monitoring phases, applying **quality best practices** to maintain a stable and performant platform for scientific operations.

EDUCATION

Master’s in Computer Science | Oklahoma State University

Bachelor’s in Computer Science | JNTU Hyderabad
