Lohit Gali

AI Gateway Platform Engineer

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

AI Gateway Platform Engineer with 5+ years of experience in backend development and cloud infrastructure, specializing in building reliable, low-latency systems for high-volume AI inference requests. Proven expertise in developing unified API endpoints, implementing rate limiting, and intelligent failovers to ensure production-ready reliability for AI workloads and seamless integrations with multiple providers like OpenAI and Anthropic.

TECHNICAL SKILLS

Programming & Scripting: JavaScript, TypeScript, Python, SQL, Shell Scripting

Backend & APIs: Node.js, Express.js, RESTful APIs, API Gateways, Distributed Systems, Microservices, Caching (Redis)

AI/ML & Integrations: AI/ML Integrations, LLM APIs (OpenAI, Anthropic, Google), Prompt Engineering, RAG, AI Workloads, AI Models

Cloud & DevOps: AWS, Azure, Docker, Kubernetes, Git, CI/CD, Terraform, GitHub Actions, Azure DevOps

Databases: PostgreSQL, MongoDB, DynamoDB

PROFESSIONAL EXPERIENCE

Senior AI Platform Engineer | CIFC Asset Management

Jul 2025 - Present

• Designed and implemented a scalable AI Gateway platform component, integrating disparate financial analytics AI models using JavaScript/TypeScript and Node.js with a microservices architecture on AWS, to provide a unified API for data scientists and researchers, reducing model integration time by 40% and improving data scientists' efficiency by 25%.

• Engineered intelligent failover mechanisms and automatic fallbacks within critical data processing pipelines, leveraging cloud infrastructure services and real-time monitoring, to ensure production-ready reliability and consistent performance for high-throughput financial AI workloads, achieving 99.99% uptime for core analytics services, mitigating risks during provider outages.

• Developed and maintained custom rate limiting policies for accessing diverse internal and external AI models, implementing sophisticated algorithms within the API Gateway, to optimize resource utilization and prevent service degradation under high-volume AI inference requests, reducing operational costs by 15% and enhancing system stability by 20%.

• Collaborated with cross-functional teams to integrate new AI providers and models (e.g., LLMs for data summarization), designing seamless integrations with external APIs and internal data systems, to expand analytical capabilities for investment decision-making, accelerating the deployment of new AI-powered features by 30%, increasing research team velocity.

• Optimized backend development for low-latency responses across critical financial data APIs, employing caching strategies (Redis) and efficient database queries (PostgreSQL), to support real-time reporting and risk modeling, decreasing API response times by 35%, supporting 100K+ daily transactions.

• Implemented comprehensive analytics for usage insights on internal AI tools, integrating logging, monitoring, and dashboarding solutions, to drive data-informed improvements and demonstrate ROI to stakeholders, providing clear visibility into model consumption, leading to a 10% reduction in underutilized resources.

• Contributed to internal developer tools and best practices for building AI-powered applications, creating documentation, code examples, and conducting workshops, to foster a strong development culture and increase team productivity, improving developer onboarding time by 20% and promoting consistent coding standards across teams.

Lead Platform Engineer, AI/ML Integrations | Samay Systems LLC

Jul 2024 - Jun 2025

• Led the design and implementation of an API Gateway for a SaaS compliance platform, using Node.js and

Express.js, handling high-throughput services for diverse data sources, to provide a unified API for compliance evidence collection, increasing system scalability by 50% and supporting 2M+ daily compliance checks.

• Developed distributed systems components for real-time data ingestion and processing, utilizing cloud infrastructure (Azure, AWS) and message queues, to enable low-latency responses for compliance reporting and anomaly detection, reducing data processing latency by 60%, enhancing the accuracy of compliance models.

• Engineered AI/ML integrations for evidence validation and risk analysis, building API connectors to LLM APIs (e.g., OpenAI) and other ML services, to automate audit preparation and provide intelligent insights to customers, accelerating audit cycle times by 30% and improving detection of compliance risks.

• Implemented advanced rate limiting and caching strategies (e.g., Redis) for external API calls, to optimize resource consumption and ensure consistent performance of the compliance platform, managing interactions with multiple providers (AWS, Azure, GitHub APIs), reducing external API costs by 25% and maintaining service stability during peak loads.

• Contributed to open source projects related to compliance automation tools, developing modular components in JavaScript/TypeScript and collaborating with the community, to align with developer tools ethos and enhance platform capabilities, improving platform visibility and garnering community contributions, enhancing feature development.

Senior Software Engineer, Platform Automation | Arvam Tech

Jul 2023 - May 2024

• Designed and implemented robust backend APIs for an Enterprise Asset Management system, using Node.js and RESTful principles, integrating with various data sources, to provide a unified API for asset tracking and operational data, increasing data accessibility by 40% for asset managers and maintenance teams.

• Developed distributed systems for processing high-volume streaming updates from asset sensors, leveraging cloud infrastructure (Azure) and event-driven architectures, to ensure near-real-time data availability for operational dashboards, reducing data lag by 70%, improving the timeliness of critical operational decisions.

• Implemented automated data pipelines for ingesting and transforming diverse asset and operational datasets, utilizing Python scripting and cloud data platforms (Azure Data Factory, ADLS Gen2), to create analytics-ready formats for trend analysis and forecasting, streamlining data processing workflows, reducing manual effort by 30% and improving data quality by 20%.

• Enhanced system reliability and performance through continuous integration and deployment (CI/CD) practices, automating testing and deployment pipelines for backend services, to deliver stable updates to internal users and minimize downtime, decreasing deployment-related incidents by 50% and accelerating feature delivery by 25%.

• Optimized cloud infrastructure resource utilization for backend services, implementing monitoring tools and fine-tuning configurations on Azure, to manage costs and ensure consistent performance under varying loads, achieving a 15% reduction in cloud operational expenses while maintaining service levels.

Software Engineer | RHYM Tech

Aug 2022 - May 2023

• Developed and maintained backend APIs for a Cybersecurity Threat Intelligence Platform, using Node.js and database integrations (PostgreSQL), supporting high-volume telemetry data, to ingest and expose security event data to analytical models, enabling the processing of 500K+ security events per second, enhancing real-time threat detection capabilities.

• Engineered Python-based data pipelines for efficient ingestion and transformation of security telemetry, implementing data cleaning, feature extraction, and aggregation logic, to support downstream ML tasks and statistical analysis, improving data quality by 25% and reducing data preparation time for analysts by 40%.

• Collaborated on improving system stability and responsiveness of the platform, debugging issues, optimizing database queries, and refining API endpoints, to ensure low-latency responses for critical security insights, reducing average API response time by 20%, enhancing user experience for security analysts.

• Contributed to the development and deployment of application features, writing clean, efficient JavaScript/TypeScript code and participating in code reviews, to deliver reliable updates and enhancements to the threat intelligence platform, supporting timely release cycles, contributing to a 15% increase in feature adoption by clients.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Developed and maintained backend APIs for a Biotech LabOps Automation platform, using Node.js with RESTful design principles and integrating with MongoDB, to support UI-driven workflows and data access for

laboratory operations, enabling seamless data exchange between lab instruments and the application, improving operational efficiency by 15%.

• Implemented core features and data access layers for various modules of the web application, writing clean, testable JavaScript/TypeScript code, to support evolving business requirements in a scalable manner, contributing to a 20% reduction in development cycles for new features.

• Assisted in optimizing API performance and ensuring system stability, identifying bottlenecks, refactoring code, and conducting unit tests, to provide a reliable platform for lab scientists, improving API response times by 10% and reducing system errors by 5%.

• Collaborated with senior engineers on system design and feature implementation, participating in design discussions, code reviews, and adopting best practices, to learn and contribute effectively to the development team, enhancing team productivity by actively supporting project deliverables and reducing technical debt.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
