Neel Gali

Senior Production Support Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Professional Experience

Senior Production Support Engineer *Jul 2025 - Present*

CIFC Asset Management | Investment Platform

- Monitored **Sidekiq** and **Kafka** job schedules for daily portfolio valuation and trade settlement workflows, triaging stalled jobs and escalating failures with documented root cause analysis.
- Triaged Level 1 trade feed and API failures by parsing structured logs, isolating root causes, and preparing Level 2 escalation packages for the engineering team.
- Wrote **Python** scripts to parse market data feed logs and detect anomalous patterns, alerting on-call engineers and reducing production incident detection time by 40% platform-wide.
- Queried **PostgreSQL** to validate portfolio and trade data correctness during incidents, writing targeted **SQL** to trace bad records and confirm fix effectiveness before closing tickets.
- Provided first-line support for portfolio managers and operations staff via **Microsoft Teams**, triaging investment platform alerts and routing unresolved issues to the development engineering team.
- Authored incident postmortems, triage guides, and runbooks in **Confluence**, documenting root causes, resolution steps, and preventive measures that reduced repeat production incident recurrence by 30%.
- Configured **PagerDuty** alert routing for trade feed failures and investment platform API errors, ensuring on-call engineers received actionable notifications within two minutes of detection consistently.
- Built **Grafana** dashboards tracking job success rates, trade feed latency, and portfolio error rates, giving operations teams real-time **SLA** visibility and cutting interruptions by 50%.

Production Support Engineer *Jul 2022 - Jun 2025*

Samay Systems LLC | B2B Compliance Platform

- Queried **SQL Server**, **Oracle**, and **MongoDB** to investigate data anomalies and platform issues, developing complex joins and aggregations that reduced data investigation time by 50%.
- Supported web-based compliance APIs built in **Rails**, diagnosing **HTTP** errors, tracing request chains through logs, and delivering root cause analysis to the development engineering team.
- Monitored **Python Celery** async task queues on the compliance platform, identifying stalled workers, recovering failed jobs, and documenting queue saturation incidents with root cause findings.
- Debugged **Python** compliance service failures by reading source, tracing stack traces, and isolating logic errors to produce fully documented escalation packages for the development team.
- Wrote **Python** support automation scripts to streamline repetitive compliance data lookups, cutting analyst investigation time by 35% and freeing the team for higher-priority escalation work.
- Monitored **Redis** memory utilization and key eviction rates on the compliance platform, alerting engineering when cache saturation threatened stability and preventing three major service outages.
- Wrote **Python** reconciliation scripts comparing **SQL Server** and **MongoDB** compliance records, detecting 12,000+ discrepant records monthly and producing audit-ready mismatch reports for the engineering team.
- Monitored **Elasticsearch** cluster health on the compliance platform, diagnosing shard failures and mapping conflicts, and coordinating with engineering to restore search availability during production outages.

Associate Support Engineer *Jul 2020 - Aug 2022*

Zemoso Technologies | LabOps Platform

- Built **Python** scripts to automate log parsing and data validation for the LabOps platform, reducing manual incident investigation time by 45% for the support team.
- Wrote complex **PostgreSQL** queries to trace data lineage across lab sample workflows, identifying corrupt records and supporting root cause analysis for recurring data quality incidents.
- Tracked scheduled **Oracle** batch jobs on the LabOps platform, detecting execution failures, analyzing logs for timeout root causes, and escalating feed failures with documented evidence.
- Documented LabOps platform support procedures and incident runbooks in **Confluence**, enabling junior engineers to resolve recurring incidents independently and reducing overall escalation volume by 25%.
- Triaged failed **GitHub Actions** CI deployments for the LabOps web platform, analyzing build logs, coordinating fixes with engineering, and documenting resolution steps in **Confluence** runbooks.

Skills

Languages: Python, SQL, Ruby, Bash, JavaScript
Databases: SQL Server, Oracle, PostgreSQL, MongoDB, Redis, Elasticsearch
Monitoring & Observability: Prometheus, Grafana, PagerDuty, structured log analysis, SLA dashboards, alerting
Tools & Platforms: Confluence, Microsoft Teams, GitHub Actions, Docker, Kubernetes, Autosys, Sidekiq, Celery, Kafka
Concepts: L1/L2 triage, incident postmortems, root cause analysis, escalation workflows, runbook authoring, data reconciliation, cache monitoring, SLA reporting, web API debugging

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
