Lohit Gali

Senior Software Engineer

lohitgali@gmail.com | +14752911455 | Stillwater, OK

PROFESSIONAL SUMMARY

Senior Software Engineer with 5+ years of relevant software development industry experience, specializing in building and operating scalable, fault-tolerant, distributed systems. Proven expertise with 2+ years of software application development using Golang and major Cloud Service Providers like AWS and Azure. Adept at storing, shipping, and retrieving large volumes of data efficiently using technologies such as ClickHouse, Kubernetes, Helm, ArgoCD, Temporal, and infrastructure-as-code tools like Terraform.

TECHNICAL SKILLS

Programming Languages: Golang, Python, SQL, JavaScript
Cloud & DevOps: AWS, Azure, GCP, Kubernetes, Helm, ArgoCD, Terraform, Docker, Jenkins, GitHub Actions
Distributed Systems & Data: ClickHouse, Temporal, Kafka, Microservices, ETL, Data Pipelines, Delta Lake
Tools & Methodologies: Git, CI/CD, Agile, Linux

PROFESSIONAL EXPERIENCE

Senior Software Engineer (Distributed Systems) | Epik Solutions

Jul 2025 - Present

• Designed and implemented highly scalable, fault-tolerant distributed systems in Golang to process and analyze critical financial datasets, improving data processing throughput by 40% for risk modeling teams.

• Orchestrated deployment of Golang microservices across multi-region Kubernetes clusters using Helm and ArgoCD, achieving 99.99% uptime and enabling continuous delivery for product features.

• Developed infrastructure-as-code using Terraform for provisioning and managing AWS cloud resources, reducing deployment times by 70% and ensuring consistent environments for development and production.

• Optimized data storage and retrieval strategies for large volumes of data efficiently by integrating ClickHouse, resulting in a 50% reduction in query latency for analytical reports.

• Leveraged Temporal for building robust, long-running workflow orchestrations, ensuring reliable execution of complex financial operations across distributed components.

Software Engineer (Cloud Platform) | Samay Systems LLC

Jul 2024 - Jun 2025

• Developed and deployed Golang-based microservices for a SaaS compliance platform on Azure, enhancing system performance by 30% and supporting over 100 enterprise clients.

• Automated cloud infrastructure provisioning and configuration on Azure using Terraform, establishing robust CI/CD pipelines and reducing manual errors by 85%.

• Implemented fault-tolerant distributed systems architectures, integrating services with Kubernetes and Helm to ensure high availability and scalability for critical compliance workloads.

• Designed and built efficient data shipping mechanisms for large volumes of compliance data, optimizing data ingestion into ClickHouse and improving reporting speeds by 60%.

• Contributed to the development of custom Kubernetes operators in Golang, automating lifecycle management for internal platform services and reducing operational overhead.

Software Engineer (Platform & Data Infrastructure) | Arvam Tech

Jul 2023 - May 2024

• Engineered core components of a distributed asset management system using Golang, improving data synchronization across global sites by 45% and ensuring real-time asset tracking.

• Implemented infrastructure-as-code practices with Terraform to manage AWS resources for data processing pipelines, cutting setup time for new environments from days to hours.

• Developed data ingestion pipelines for storing and retrieving large volumes of operational data efficiently,

utilizing Kafka and ClickHouse, which reduced data processing costs by 20%.

• Containerized legacy applications with Docker and deployed them to Kubernetes, enhancing system stability and enabling seamless scaling to handle peak loads.

• Collaborated on designing fault-tolerant architectures, integrating monitoring solutions to ensure proactive identification and resolution of issues in production environments.

Software Engineer (Backend & Data Pipelines) | RHYM Tech

Aug 2022 - May 2023

• Developed high-performance backend services in Golang for a cybersecurity threat intelligence platform, processing high-volume telemetry data and improving data analysis speed by 35%.

• Designed and implemented data pipelines for shipping large volumes of event data into structured storage, ensuring data integrity and availability for real-time threat detection.

• Utilized cloud services (AWS S3, EC2) to build scalable data processing workflows, supporting rapid ingestion and querying of security insights.

• Implemented robust API integrations to connect with various threat intelligence feeds, contributing to a 25% increase in actionable security alerts for enterprise clients.

Junior Software Developer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Developed and maintained backend services using Python and SQL for a biotech lab automation system, supporting critical laboratory operations and data management.

• Contributed to the design and implementation of RESTful APIs, enabling seamless data exchange between frontend applications and database systems.

• Assisted in deploying and managing applications on cloud platforms, gaining foundational experience with distributed systems concepts and basic infrastructure support.

• Participated in agile development cycles, collaborating with cross-functional teams to deliver software features and troubleshoot production issues.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
