Neel Gali

Platform Systems Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Platform Systems Engineer with 3+ years of software development experience on Linux, specializing in systems programming and distributed systems design. Proficient in Python, Go, and C++, with a strong background in data structures and algorithms, adept at debugging and troubleshooting performance and system-level issues.

TECHNICAL SKILLS

Programming Languages: Python, Go, C++, Java, Scala

Systems & OS: Linux, Linux Kernel, Systems Programming, Distributed Systems Design, Networking, Platform Engineering

Data & Algorithms: Data Structures, Algorithms, Filesystems, Storage, Data Protection Technologies, Performance Optimization

Tools & Methodologies: Debugging, Troubleshooting, Performance Analysis, System-level Issues, Git, Docker, Kubernetes, CI/CD

PROFESSIONAL EXPERIENCE

Platform Systems Engineer | Epik Solutions

Jun 2025 - Present

• Engineered robust system automation solutions on Linux using Python and Go, streamlining operational workflows for platform reliability teams; improved system performance monitoring by 30% and reduced manual incident response time by 25%.

• Developed specialized data processing utilities using C++ and Python to analyze large-scale system logs and performance metrics, supporting advanced anomaly detection across distributed systems; enhanced data integrity and accelerated troubleshooting efforts for critical infrastructure.

• Collaborated with cross-functional teams to translate complex operational requirements into scalable systems designs for critical platform components, ensuring alignment with service level objectives; improved system stability by optimizing resource allocation and reducing downtime.

• Architected and implemented high-performance backend services using Go for internal platform tools, ensuring seamless integration with existing Linux-based infrastructure and distributed systems; enhanced operational efficiency for engineering teams by 20% through automated task execution.

• Designed and implemented robust data collection pipelines for system-level metrics and KPIs, leveraging Python for large-scale data aggregation; provided critical insights into platform performance, supporting proactive troubleshooting and strategic decision-making for stakeholders.

Distributed Systems Engineer | Samay Systems LLC

July 2024 - Jun 2025

• Designed and implemented core components of a distributed systems platform using Go, focusing on high-availability and fault-tolerance; ensured robust data consistency across multiple service instances for critical backend operations.

• Developed performance-optimized backend services in C++ and Python for scalable multi-tenant data processing within a Linux environment, enforcing stringent resource isolation; achieved 15% reduction in latency for data validation queries, benefiting multiple client applications.

• Engineered data ingestion pipelines using Python and Go to aggregate and validate evidence from diverse cloud and enterprise APIs (e.g., AWS, Azure, GitHub, Jira), ensuring consistent data structures for downstream processing; improved data reliability and reduced ingestion errors by 10%.

• Implemented complex data synchronization mechanisms across distributed systems, ensuring robust data integrity and consistency using advanced algorithms; facilitated seamless integration of critical system data with analytical platforms for enhanced operational insights.

• Designed and optimized low-latency data access layers for large-scale historical datasets, leveraging

advanced data structures and query optimization techniques; accelerated data retrieval performance by 25% for compliance auditing and reporting systems.

• Architected scalable relational database schemas and complex SQL workflows to support multi-tenant data management, focusing on efficiency and integrity for distributed systems; enabled handling of petabytes of data while maintaining sub-second query times.

• Managed and deployed containerized services using Docker and Kubernetes on cloud platforms, establishing robust CI/CD pipelines for continuous integration and delivery; ensured high availability and seamless operation of critical distributed systems in production environments.

Software Development Engineer Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Supported core software development for real-time control systems of autonomous vehicles, contributing to low-level systems programming initiatives on Linux-based platforms; enhanced system responsiveness and operational reliability.

• Developed Python-based data processing pipelines to transform raw sensor data into structured formats, leveraging efficient data structures and algorithms; improved data throughput by 20% for downstream analytical systems.

• Implemented and optimized performance-critical algorithms in C++ for sensor data fusion and real-time decision-making systems, ensuring high accuracy and low latency; validated system outputs against strict operational constraints for autonomous transport applications.

• Contributed to backend system integrations for internal engineering tools, focusing on API design and data handling using Python; improved tool stability by 15% and streamlined data exchange between critical systems.

• Assisted with deployment and monitoring of system services on Linux production environments, gaining hands-on experience with performance profiling and system-level debugging; ensured stable operation of critical components after release.

Associate Software Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to the development of a cloud-based platform, focusing on backend services and data management for scientific operations, leveraging Python for robust system integrations; enhanced data traceability and operational efficiency across the platform.

• Collaborated with stakeholders to translate complex domain workflows into structured backend APIs using Python, emphasizing efficient data structures and algorithms for data processing; streamlined data exchange and improved system scalability.

• Designed and implemented database schema migrations and optimized SQL queries for high-volume batch data processing, ensuring data consistency across distributed systems; improved data integrity by 99.8% and reduced processing errors.

• Supported Proof-of-Concept development for data processing workflows by automating dataset preparation and feature engineering using Python, ensuring consistent inputs for analytical models; accelerated prototype development cycles by 30%.

• Integrated CI/CD pipelines for automated testing and deployment of backend services, focusing on system-level validation and security controls; ensured compliance with governance standards and improved release velocity by 25%.

EDUCATION

Master’s in Computer Science | Oklahoma State University

Bachelor’s in Computer Science | JNTU Hyderabad, India
