Professional Experience

DevOps Engineer *Jun 2025 – Present*
Epik Solutions

- Architected **CI/CD** pipelines using **Jenkins** and **GitHub Actions** automating software delivery across environments, reducing deployment time 40% and improving release frequency for development teams.
- Provisioned **AWS EKS** clusters and cloud resources using **Terraform** IaC, achieving 99.9% infrastructure consistency and accelerating new environment setup by 60% for new projects reliably.
- Containerized scalable microservices architecture using **Docker** and **Kubernetes** for streamlined deployments, enhancing application availability by 25% and cutting resource consumption by 15%
- Developed **Python** and **Bash** automation scripts for system configuration, monitoring, and operational tasks, improving efficiency 30% and enabling proactive issue detection enhancing system uptime
- Resolved complex production incidents and performance bottlenecks across distributed systems using advanced troubleshooting, restoring critical services within SLAs and maintaining high system reliability
- Integrated security best practices into **CI/CD** pipelines with development and security teams, reducing vulnerabilities by 20% and ensuring compliance with industry standards across all deployments.

Cloud DevOps Engineer *Jul 2024 – Jun 2025*
Samay Systems LLC

- Designed and deployed scalable cloud infrastructure on **AWS** and **Azure** using **Terraform** IaC, enabling rapid environment provisioning and reducing setup time by 50% for clients.
- Built **Azure DevOps** CI/CD integration workflows for automated builds, tests, and deployments, increasing code delivery speed 35% and improving quality via continuous feedback loops daily.
- Implemented **Docker** containerization and **Kubernetes** orchestration strategies across multi-tenant cloud environments for microservices deployments, consistently achieving 99.99% application uptime
- Authored **Python** and **Groovy** scripts automating operational tasks, data synchronization, and system health checks, saving 10 hours of weekly maintenance for the operations team consistently.
- Resolved complex cloud infrastructure and application performance issues using advanced analytical troubleshooting skills, minimizing downtime by 25% and enhancing system stability for critical business.
- Guided development teams on cloud infrastructure integration, scalability, and resilience best practices, consistently improving cross-functional collaboration efficiency by 15% and accelerating delivery times.

DevOps Intern *Jun 2023 – Aug 2023*
Monarch Tractor

- Built and maintained **Jenkins** CI/CD pipelines for automated testing and deployment of ML models and related services, contributing a 10% reduction in deployment lead time.
- Built **Docker** images for microservices and ML inference applications, significantly improving portability and deployment consistency across all development and staging environments for the engineering team.
- Deployed and scaled containerized ML applications on cloud platforms using **Kubernetes**, gaining hands-on orchestration experience and actively contributing to high availability of production inference
- Wrote **Bash** scripts automating routine system administration tasks and development team environment setup, reducing manual configuration effort by 20% and significantly accelerating engineer onboarding.
- Implemented **Ansible** configuration management practices in collaboration with senior engineers, ensuring server consistency across all development environments and building foundational knowledge

Associate Cloud Engineer *Jul 2021 – Aug 2022*
ZeMoSo Technologies

- Supported **AWS** and **Azure** cloud infrastructure operations including resource provisioning and management, maintaining a stable and scalable environment and improving overall platform reliability
- Monitored system performance and health metrics using internal tooling to proactively identify and flag potential issues, helping maintain 99.5% uptime for all critical backend services.
- Developed basic **Python** automation scripts to streamline data processing workflows and system reporting tasks, reducing manual data handling time by 15% for the engineering team.
- Collaborated with senior engineers to implement configuration management and version control best practices, improving development environment consistency and fully standardizing workflows across all team members.

Technical Skills

CI/CD & DevOps Tools: Jenkins, GitHub Actions, Azure DevOps, Git, Apache Kafka
Cloud & Containerization: AWS EKS, Docker, Kubernetes, Azure, GCP
Infrastructure as Code: Terraform, Ansible
Scripting & Automation: Python, Bash, Groovy, PowerShell
Monitoring & Troubleshooting: Prometheus, Grafana, ELK Stack

Education

Master's in Computer Science, Oklahoma State University, Stillwater, OK
Bachelor's in Computer Science, JNTU Hyderabad, India
