Neel Gali

Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX | linkedin.com/in/neelgali

Skills

Languages: Python, Java, TypeScript, JavaScript, SQL, Ruby, Bash
Software Development: Spring Boot, FastAPI, React, Ruby on Rails, REST APIs, GraphQL, Microservices
Cloud & Data: AWS (Lambda, ECS, SQS), Azure, Docker, Kubernetes, PostgreSQL, Redis, Neo4j
Testing & Delivery: Git, GitHub Actions, CI/CD, Automated Testing, Regression Testing, Debugging, Agile
Analysis & Documentation: Customer Requirements, Technical Writing, Design Documentation, Operational Analytics

Professional Experience

Software Engineer AI *Jun 2025 - Present*
Epik Solutions | Enterprise Security / Incident Triage

- Developed **Python REST services and React/TypeScript interfaces** for incident review, approvals, and escalation, integrating PostgreSQL, Redis, and AWS into an end-to-end operational workflow.
- Implemented an **AI-assisted triage pipeline** that organized alerts, logs, and tickets into prioritized summaries with source evidence, helping operators investigate issues and identify next actions.
- Added **telemetry for queue depth, latency, failures, and operator decisions**, exposing recurring workflow bottlenecks and contributing to a **35% reduction in repeat triage cycles**.
- Built **regression evaluations across incident categories** to check duplicate detection, severity reasoning, and remediation guidance as prompts and service behavior changed.
- Integrated **RBAC, OAuth2/OIDC, SSO/SAML, and audit logs** to protect sensitive workflow data and preserve traceability of user actions across enterprise services.

Founding Engineer (Full Stack AI) *Jul 2024 - Jun 2025*
Samay Systems LLC | B2B SaaS Compliance AI Platform

- Implemented **Python/TypeScript services and GraphQL APIs** for a multi-tenant compliance platform serving **15+ enterprise clients**, using Lambda, ECS, SQS, PostgreSQL, and Neo4j.
- Translated **customer requirements into workflows and API/data models**, delivering features through implementation, demos, production fixes, and post-launch measurement.
- Modeled policies, evidence, cloud controls, tickets, and documents as a **structured compliance graph**, enabling source-linked answers and traceable audit records.
- Automated evidence review with retrieval and tool-calling workflows, reducing manual review effort by **70%** while retaining supporting sources for user validation.
- Implemented **CI/CD gates, environment promotion, tenant isolation, and access controls**, supporting repeatable releases and reliable behavior across customer environments.
- Authored **architecture decisions and design documentation**, and added analytics for job latency, queue failures, and evidence gaps to guide improvements and release-readiness reviews.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*
Monarch Tractor | Autonomous Systems / Workflow Automation

- Built **Python telemetry pipelines** that transformed sensor, image, and field-operations data into validated datasets for labeling, analysis, and downstream ML workflows.
- Automated **identity, device, and data-quality checks** across internal operational systems, reducing provisioning and validation time by **80%**.

Software Engineer *Jul 2020 - Aug 2022*
ZeMoSo Technologies | LabOps / Regulated Workflow SaaS

- Developed **Java Spring Boot and Ruby on Rails services** with React/TypeScript interfaces for inventory, sample lineage, scheduling, and experiment tracking used by **500+ scientists**.
- Built **REST APIs, validation checks, and role-based workflows**, maintaining reliable data capture and audit history across regulated scientific review and approval processes.
- Optimized **PostgreSQL queries and background jobs** for high-volume sample events, reducing repeated timeout and debugging cycles in daily laboratory operations.
- Added **input validation, background retries, and failure-state reporting** for uploads and sample-lineage workflows, improving recoverability when processing failed.
- Authored **100+ automated tests** and collaborated with QA and product teams to reproduce defects, validate fixes, and deliver user-facing workflow improvements.
- Documented **deployment behavior, validation notes, and release smoke tests**, helping QA and infrastructure teams verify changes consistently before regulated releases.

Education

Master's in Computer Science, Oklahoma State University *Aug 2022 - May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India
