Neel Gali

Software Engineer | AI-Native Cloud Automation
neelgali7@gmail.com | +1(475)-291-1455 | Seattle, WA | linkedin.com/in/neelgali

Skills

Languages: Go, Python, TypeScript, JavaScript, SQL, Bash, Java, C++
AI-Assisted Engineering: Cursor, Claude, GitHub Copilot, Codex, LLMs, RAG, Prompting, Evals
Backend/Cloud: REST APIs, FastAPI, Node.js, GraphQL, Microservices, PostgreSQL, Redis, AWS, Lambda, ECS
Infrastructure: Linux/Ubuntu, Docker, Kubernetes, Terraform, GitHub Actions, Concourse, Shell, Git
AI Infrastructure: Agentic Workflows, Model Evaluation, Benchmarking, Caching, Batching, Quantization
Operations: Internal Tools, Workflow Automation, Observability, Prometheus, Grafana, Agile

Professional Experience

Software Engineer AI *Jun 2025 - Present*

Epik Solutions | Enterprise Security & Infrastructure Automation Platform

- Built **Go, Python, and TypeScript services** that automated manual security and infrastructure workflows across ingestion, policy checks, approvals, notifications, and audit-ready reporting.
- Used **Cursor, Claude, GitHub Copilot, and Codex** to accelerate implementation while validating generated code through tests, code review, observability checks, and production rollback plans.
- Designed **REST APIs and internal tooling** for engineering teams to inspect service health, credential findings, deployment status, and recurring operational work from a single interface.
- Deployed services on **Linux, Docker, Kubernetes, AWS, and Terraform**, with GitHub Actions pipelines for testing, release promotion, and environment checks.
- Implemented **LLM-assisted remediation workflows** using RAG, prompt regression tests, human approval queues, and evaluation datasets to summarize defects and recommend next actions.
- Added structured logs, metrics, dashboards, and alert routes in Prometheus, Grafana, and CloudWatch, reducing repeated triage cycles by **35%**.

Founding Engineer (Full Stack AI) *Jul 2024 - Jun 2025*

Samay Systems LLC | B2B SaaS Compliance AI Platform

- Designed a **multi-tenant AI SaaS platform** on AWS using Python, TypeScript, GraphQL, Lambda, ECS, SQS, PostgreSQL, and Neo4j for **15+ enterprise clients**.
- Built **agentic AI workflows** with AWS Bedrock, Azure OpenAI, LangChain, tool-calling agents, vector search, and eval datasets to automate evidence review and compliance analysis.
- Created **automation services** for evidence collection, cloud-control validation, Jira/GitHub intake, document processing, and customer-facing workflow status across dev, staging, and production.
- Implemented CI/CD with **GitHub Actions, Docker, Terraform, and AWS**, adding test gates, configuration checks, and deploy notes so features could move quickly without losing reliability.
- Built workflow analytics for **AI job latency, queue failures, and automation gaps**, giving engineers a production-readiness view before customer releases.
- Owned features from discovery through deployment, including architecture, implementation, demos, production fixes, and handoff documentation for stakeholders.

ML / Software Engineering Intern *Jun 2023 - Aug 2023*

Monarch Tractor | Autonomous Systems & Physical Infrastructure Data

- Built **Python telemetry pipelines** for image, sensor, and operational datasets used in ML workflows, converting raw field data into validated artifacts for downstream analysis.
- Created automation and dashboards for identity, device, data-quality, and field-operations workflows, reducing provisioning and validation time by **80%**.

Software Engineer *Jul 2020 - Aug 2022*

ZeMoSo Technologies | LabOps / Scientific Workflow Platform

- Delivered full-stack workflow modules using React, TypeScript, Java Spring Boot, Ruby on Rails, and PostgreSQL for a regulated LabOps platform used by **500+ scientists**.
- Built **REST APIs**, role-based workflows, audit logs, data validation, and release checks across inventory, sample lineage, file uploads, scheduling, and experiment tracking modules.
- Developed **React/TypeScript operational views** for lab inventory, sample status, and experiment queues so users could resolve blockers without database or support tickets.
- Refactored backend jobs and SQL queries for high-volume sample events, improving page loads and reducing repeated timeout/debug cycles in daily LabOps workflows.
- Automated checks for failed jobs, stale records, upload errors, and environment drift, giving support teams faster visibility into production workflow health.
- Partnered with QA, product, and infrastructure teams in Agile sprints to ship fixes, demo workflow improvements, and document deployment behavior for regulated releases.

Education

Master's in Computer Science, Oklahoma State University, Stillwater *Aug 2022 - May 2024*
Bachelor's in Computer Science, JNTUH *Aug 2017 - Jun 2021*
