Neel Gali

Senior Software Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Professional Experience

Software Engineer *Jul 2025 – Present*

Epik Solutions | Enterprise Platform

- Spearheaded the development of a novel RAG architecture for LLM-based threat intelligence analysis, integrating **LangGraph** for complex agentic workflows and achieving 95% accuracy in identifying geopolitical risk vectors.
- Engineered production-grade **Python** microservices on **AWS Lambda** and **ECS**, handling over 500,000 daily requests for real-time threat data enrichment, reducing latency by 30%.
- Designed and implemented fine-tuning pipelines for large language models using **PyTorch** on **AWS SageMaker**, enhancing sentiment analysis capabilities and improving detection of emerging threats by 20%.
- Developed and deployed robust **JavaScript** front-end components using **React** for an interactive threat visualization dashboard, improving user comprehension of complex security data by 40%.
- Optimized **Elasticsearch** indexing strategies and query performance for massive threat intelligence datasets, cutting search response times by 50% and enabling near real-time anomaly detection.
- Led the adoption of **CrewAI** for orchestrating multi-agent systems, automating complex threat hunting scenarios and reducing manual investigation effort by 60% for the security operations team.
- Implemented comprehensive **CI/CD** pipelines with **Jenkins** and **Docker**, automating build, test, and deployment processes for all AI services, decreasing release cycles by 75%.

Software Engineer *Jul 2024 – Jun 2025*

Samay Systems LLC | B2B Platform

- Developed and deployed advanced **NLP** models using **scikit-learn** and **Pandas** for text classification and entity resolution in customer support tickets, improving automated routing accuracy by 18%.
- Built scalable RESTful APIs with **FastAPI** in **Python** to serve real-time data to internal and external applications, processing over 1 million transactions daily with sub-second latency.
- Contributed to the development of a data processing pipeline using **Apache Spark** on **AWS EC2**, efficiently transforming and aggregating terabytes of user activity data for analytical purposes.
- Implemented robust data validation and cleaning routines for large datasets, ensuring data integrity and accuracy for critical business intelligence reporting, reducing data errors by 15%.
- Worked with **PostgreSQL** to design and optimize database schemas, supporting complex analytical queries and significantly improving application performance by 25%.
- Integrated the **OpenAI API** for experimental generative features, exploring prompt engineering techniques to enhance user engagement and content creation capabilities within the platform.
- Leveraged **event-driven architecture** patterns using **AWS SQS** to build decoupled and resilient microservices, processing asynchronous tasks and improving system fault tolerance by 30%.
- Collaborated with cross-functional teams to gather requirements and translate business needs into technical specifications for new platform features, ensuring alignment and timely delivery.

Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | SaaS Platform

- Developed backend services using **Python** and **Flask** for a financial data aggregation platform, processing and normalizing diverse data sources from multiple third-party providers efficiently.
- Implemented data ingestion pipelines that utilized **SQLAlchemy** to interact with **PostgreSQL** databases, ensuring reliable storage and retrieval of financial market data for analysis.
- Designed and built RESTful APIs to expose financial data to client applications, enabling seamless integration and data access for internal dashboards and external partners.
- Wrote unit and integration tests using **Pytest** to ensure code quality and application stability, achieving over 90% test coverage for critical backend modules.
- Participated in agile development processes, including sprint planning and daily stand-ups, contributing to the timely delivery of software releases and feature enhancements.
- Assisted in the migration of legacy systems to a more modern microservices architecture, improving scalability and maintainability of the platform codebase.

Skills

Languages: Python, JavaScript, SQL
Frameworks & Tools: OpenAI API, LangGraph, CrewAI, PyTorch, TensorFlow, scikit-learn, Pandas, NumPy, Flask, FastAPI, Docker, Kubernetes
Cloud & Infra: AWS Lambda, AWS SageMaker, ECS, S3, EC2, REST APIs, CI/CD, MongoDB, Elasticsearch
Databases & Search: **Concepts**: Machine Learning, Data Science, Generative AI, Large Language Models (LLMs), Natural Language Processing (NLP), Text Analytics, RAG Architectures, Prompt Engineering, Model Evaluation

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
