Professional Experience

Solutions Engineer *Jul 2025 - Present*

Epik Solutions | Enterprise SaaS Platform

- Authored **OpenAPI 3.0** specifications for the enterprise SaaS API, defining complete typed request and response contracts that standardized integrations across 30+ third-party client consumer applications.
- Built **webhook** delivery system with **HMAC** signature verification and exponential-backoff retries, enabling 30+ enterprise clients to receive real-time event notifications from the SaaS platform reliably.
- Designed **API versioning** using URL path prefixes and deprecation headers, maintaining backward compatibility while shipping five breaking-change-free evolution cycles across all existing enterprise client integrations.
- Built **Python FastAPI** microservice integrating **GPT-4o** for intelligent document classification and extraction, reducing manual processing time by 70% across 10,000+ daily document uploads in production.
- Shipped **React** and **TypeScript** client-facing analytics dashboard, iterating rapidly on user feedback and delivering three major feature milestones ahead of schedule for enterprise SaaS clients.
- Prototyped **LangGraph** agentic AI workflow on the Python document pipeline, chaining LLM reasoning steps with automated validation loops and human-in-the-loop review for high-stakes classification decisions.
- Partnered with non-technical stakeholders and executive sponsors to translate complex system architecture decisions into clear product roadmaps, securing alignment across engineering, product, and operations teams.

Solutions Engineer *Jul 2022 - Jun 2025*

Samay Systems LLC | B2B Compliance Platform

- Owned backend solutions engineering for a B2B compliance SaaS, shipping three product releases on schedule while consistently serving 10,000+ enterprise users with strong reliability guarantees.
- Implemented **OAuth2** and **JWT** API security on the compliance platform, enforcing scope restrictions, token rotation, and **OpenAPI 3.0** security annotations across all public service endpoints.
- Built **React** and **TypeScript** compliance reporting dashboard, integrating the **Rails** REST API and enabling compliance officers to self-serve audit data with zero engineering team intervention.
- Refactored synchronous **Python** compliance services to **asyncio** with **httpx**, enabling concurrent third-party regulatory API calls and cutting external integration latency by 55% under production load.
- Integrated **WebSocket** streaming into the compliance dashboard using **FastAPI** and **React**, delivering live regulatory alert feeds that eliminated manual page refreshes for compliance officer workflows.
- Integrated **Elasticsearch** into the compliance data platform, indexing 5M+ regulatory documents and cutting document lookup latency from 8 seconds to under 300ms for compliance officers.
- Built **Python RAG** pipeline on the compliance platform, embedding regulatory documents into **Pinecone** and serving **GPT-4o**-powered natural language Q&A with cited source references to officers.
- Built **Python** analytics pipeline to profile API endpoint latency hot spots, surfacing optimization opportunities that drove a 60% reduction in compliance platform database query load.

Software Engineer *Jul 2020 - Aug 2022*

Zemoso Technologies | LabOps Platform

- Engineered **Ruby on Rails** and **Python** modules for a LabOps SaaS, designing REST API endpoints, data models, and CI-enforced test coverage shipped iteratively from scratch.
- Delivered rapid proof-of-concept prototypes for two LabOps client stakeholders, iterating on feedback over two-week sprints and converting both demos into fully scoped production feature contracts.
- Built **Python** data export APIs for lab reporting, designing transformation pipelines that processed 500K+ monthly records and reduced manual researcher data preparation time by 50%.
- Configured **GitHub Actions** CI/CD for Rails and Python services, automating **RSpec** and **pytest** test runs, Rubocop linting, and staging deployments on every pull request submitted.
- Profiled **PostgreSQL** queries for lab sample tracking using **EXPLAIN ANALYZE** and targeted index tuning, reducing report generation time by 30% and eliminating production database slowdowns.

Skills

Languages: Python, TypeScript, JavaScript, Ruby, SQL, Bash
Frameworks & Tools: React, FastAPI, Pydantic, SQLAlchemy, asyncio, httpx, Ruby on Rails, pandas, RSpec, pytest
AI & Agentic: LangGraph, GPT-4o, RAG, Pinecone, LLM integration, agentic workflows, NLP, human-in-the-loop
API & Security: OpenAPI 3.0, REST, GraphQL, WebSocket, OAuth2, JWT, HMAC, API versioning, webhook delivery
Cloud & Infra: AWS (EKS, Lambda, S3), Docker, Kubernetes, GitHub Actions, Heroku, Prometheus, Grafana
Databases & Search: PostgreSQL, Redis, Elasticsearch, MongoDB
Concepts: solutions engineering, distributed systems, technical estimation, client consulting, system design, CI/CD

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
