Professional Experience

Software Engineer *Jul 2025 – Present*

Epik Solutions | Enterprise Security Platform

- Architected and led development of core **Python** backend services for an **enterprise security platform**, powering **AI-driven security workflows** that process **50,000+ daily events** for enterprise clients.
- Owned end-to-end feature delivery from **ambiguous requirements** to production, working directly with internal stakeholders to translate open-ended problems into shipped systems within **tight sprint cycles**.
- Built **AI-assisted security automation** using **LangChain** and **Azure OpenAI**, generating real-time recommendations that reduced **manual analyst workload by 30%**.
- Designed and optimized **PostgreSQL** schemas and **REST APIs** (**Django REST Framework**) supporting **500+ concurrent users** with **sub-second response times**.
- Implemented **CI/CD pipelines** and containerized deployments (**Docker**, **Kubernetes**) for **production-critical services**, maintaining **99.9% uptime**.
- Built internal **monitoring and observability dashboards** (**Prometheus**, **Grafana**) for production services, cutting **mean-time-to-detect for incidents by 25%**.

Founding Engineer (Full Stack) *Jul 2024 – Jun 2025*

Samay Systems LLC | B2B SaaS Compliance AI Platform

- Joined as a **founding engineer** to build a **multi-tenant AI compliance SaaS platform** from the ground up using **Python/Django**, **AWS**, and **PostgreSQL**, scaling to **10,000+ users** with strict tenant isolation.
- Owned the full stack across **data models, APIs, and frontend** (**React**) – moving fluidly between architecture decisions and hands-on implementation as an early engineer.
- Built **LLM-powered compliance automation** (**LangChain**, **RAG pipelines** over **Pinecone**) that reduced **manual auditor effort by 70%** for enterprise customers.
- Developed robust **distributed backend services** with strict **data isolation**, supporting **15+ enterprise clients** in a fast-paced startup environment.
- Designed core **data ingestion pipelines** (**AWS Lambda**, **Step Functions**) to process **real-time operational events**, powering downstream analytics and reporting for enterprise customers.
- Implemented **CI/CD pipelines** and automated testing (**pytest**, **GitHub Actions**), reducing **deployment time by 35%** and enabling **weekly release cycles**.
- Collaborated directly with early customers and cross-functional teams to prioritize and ship **8+ major features** in an **agile, fast-moving startup environment**.

SDE Intern *Jun 2023 – Aug 2023*

Monarch Tractor | Autonomous Agricultural Systems

- Contributed to **MLOps data infrastructure** for **autonomous tractor systems**, processing **location telemetry and sensor data** to support **computer vision model training** and real-time **navigation algorithms**.
- Developed **React** and **Golang** features for an internal **ML data labeling platform**, improving **annotation throughput by 20%** for training datasets used in production **robotics deployments**.

Full Stack Developer *Jul 2020 – Aug 2022*

Zemoso Technologies | LabOps / Laboratory-as-a-Service (SaaS)

- Built and maintained **Python/Django** web applications and **REST APIs** powering a **LabOps SaaS platform**, supporting **inventory management**, experimental tracking, and sample lifecycle workflows for **500+ scientists**.
- Designed **PostgreSQL** schemas and optimized queries, reducing **report generation time by 30%** through indexing and query optimization across **10+ product modules**.
- Developed responsive frontend features using **React** and **JavaScript**, improving usability and data visualization for internal **analytics dashboards**.
- Authored **100+ automated tests** (**pytest**) and established **CI/CD pipelines** (**Jenkins**), resolving production issues through systematic debugging in an **agile environment**.
- Integrated third-party APIs for **lab equipment and vendor systems**, expanding platform capabilities and improving **data exchange reliability by 20%**.
- Participated in the full **software development lifecycle** – requirements gathering, code review, testing, and deployment – contributing to **12+ feature releases annually**.

Skills

Languages: Python, JavaScript, TypeScript, Go, SQL
Frameworks: Django, Django REST Framework, FastAPI, React, Node.js, Spring Boot
AI & Automation: LangChain, RAG, OpenAI API, Azure OpenAI, AI-Powered Workflows
Cloud & Infra: AWS (Lambda, S3, ECS), Docker, Kubernetes, PostgreSQL, Redis, CI/CD
Concepts: Full Stack Development, Microservices, Multi-Tenant Systems, Inventory / ERP Systems, Robotics & Sensor Data Pipelines, Observability & Monitoring, Ownership, Agile

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
