Neel Gali

AI Evaluation System Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Professional Experience

Software Engineer *Jul 2025 – Present*

Epik Solutions | Enterprise Platform

- Designed and implemented a scalable **AI evaluation system** on **AWS Lambda** and **S3** for **LLM** agent behavior, processing 100K daily evaluations to ensure model quality.
- Developed automated pipelines using **Apache Airflow** and **Python** to curate diverse **datasets** for **AI model** testing, improving data coverage by 40% for critical scenarios.
- Engineered an **offline replay** framework with **Docker** and **Kubernetes** for agent interactions, enabling detailed debugging of **failure modes** and reducing investigation time by 30%.
- Implemented real-time **regression alerts** and **dashboards** using **Grafana** and **Prometheus** to monitor **AI evaluation system** performance, reducing critical incident detection time by 75%.
- Integrated **OpenAI API** into a feedback loop system using **LangChain** to interpret **user signals**, informing **model and harness changes** that boosted user satisfaction by 15%.
- Built **analysis tooling** using **Python** and **Pandas** for **debugging agent behavior**, identifying and clustering themes from 5,000 "bad" sessions to derive actionable insights.
- Established **reliability guardrails** and metrics for "good/bad/degraded" **AI sessions** via **Great Expectations** and **AWS CloudWatch**, enhancing system stability by 20% over prior quarter.

Software Engineer *Jul 2022 – Jun 2025*

Samay Systems LLC | B2B Platform

- Developed high-throughput **data pipelines** using **Apache Spark** and **Kafka** on **AWS EC2** to process 500GB daily for **machine learning models**, reducing data latency by 60%.
- Implemented robust data validation checks and monitoring pipelines for incoming **datasets** using **Python**, ensuring data integrity and consistency, which reduced downstream **model** errors by 18%.
- Designed and deployed **MLOps infrastructure** with **MLflow** and **Docker** for experiment tracking and model versioning, improving deployment frequency by 2x for data scientists.
- Engineered an **experimentation platform** leveraging **A/B testing** methodologies with **Python** and **PostgreSQL** for feature rollouts, driving a 10% increase in user engagement.
- Implemented **RESTful APIs** using **Python FastAPI** for real-time model inference and data retrieval, supporting 10K requests per second for critical business applications.
- Optimized **PostgreSQL** database performance and schema for large-scale data ingestion, improving query speeds by 40% while accommodating 20% annual data growth.
- Developed performance monitoring dashboards and alerting systems for **machine learning models** using **Grafana** and **Prometheus**, proactively identifying performance degradations and ensuring operational stability for critical services.
- Collaborated with **data scientists** to operationalize **concrete metrics** and reporting **dashboards** using **Looker** and **AWS S3**, enhancing decision-making accuracy by 25%.

Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | SaaS Platform

- Developed robust **microservices** using **Java Spring Boot** and **REST APIs** on **AWS EC2** to support new features, accommodating 20% user growth without downtime.
- Designed and implemented **ETL pipelines** with **Python** and **AWS S3** for data synchronization across enterprise systems, reducing manual data reconciliation efforts by 35%.
- Managed and optimized **PostgreSQL** databases, including schema design and query tuning, improving application response times by 20% for critical customer workflows.
- Implemented **CI/CD pipelines** using **Jenkins** and **Docker** for automated testing and deployments, accelerating release cycles by 50% for various backend services.
- Contributed to a high-traffic payment processing module using **Java** and **Kafka**, handling 1M transactions daily with 99.99% reliability for financial operations.

Skills

Languages: Python, Java
Frameworks & Tools: Apache Airflow, Docker, Kubernetes, Grafana, Prometheus, Pandas, LangChain, Apache Spark, Kafka, MLflow, FastAPI, Looker, Spring Boot, Jenkins, Great Expectations
Cloud & Infra: AWS Lambda, AWS S3, AWS EC2, AWS CloudWatch
Databases & Search: PostgreSQL
Tools & Methodologies: LLM, Data Pipelines, MLOps, Experimentation Platform, A/B Testing, REST APIs, Microservices, ETL, CI/CD, OpenAI API, AI Evaluation Systems

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
