Neel Gali

Research Engineer – LLMs, Agents & Evaluation Systems
neelgali7@gmail.com | +1 (475)-291-1455 | United States

Summary

Research Engineer with 4+ years of experience working at the intersection of **LLMs, agentic systems, experimentation, and research infrastructure**. Strong background in designing **evaluations, experiment pipelines, and agent harnesses** to measure and improve reasoning, code generation, and task execution capabilities of AI systems. Comfortable traversing the full stack—from data and model experimentation to tooling and infrastructure—while operating effectively in ambiguous, fast-moving research environments.

Technical Skills

ML & LLMs: Large Language Models, prompt engineering, tool-calling agents, reasoning & planning
Reinforcement Learning: RL experimentation, reward shaping, evaluation-driven improvement
Experimentation: experiment design, offline/online evaluation, ablations, metrics
Agent Systems: agent harnesses, multi-step task execution, environment orchestration
Programming: Python, SQL, distributed experiment scripts
ML Tooling: PyTorch, TensorFlow, Hugging Face, experiment tracking
Infrastructure: research pipelines, scalable experiment runners, reproducibility
Data & Evaluation: dataset curation, labeling strategies, quality control

---

Professional Experience

Epik Solutions *(Jul 2025 – Present)*

Research Engineer (LLMs & Agentic Systems)

- Designed **LLM-based agent frameworks** capable of executing multi-step reasoning and tool-use workflows, enabling systematic evaluation of software-engineering-style tasks.
- Built **evaluation harnesses** to measure model performance on reasoning, planning, and code-related capabilities, enabling rapid iteration across model variants.
- Ran controlled **ML and RL experiments** to test prompt strategies, reward signals, and agent behaviors, using quantitative metrics to guide improvements.
- Developed **research infrastructure components** to orchestrate experiments, track results, and ensure reproducibility across runs.
- Curated high-quality **evaluation datasets** focused on correctness, reasoning depth, and execution fidelity.
- Collaborated closely with researchers and engineers to translate research ideas into testable systems under tight iteration cycles.

Samay Systems LLC *(Feb 2025 – Jun 2025)*

Research Engineer (Applied ML & Evaluation Pipelines)

- Implemented **LLM evaluation pipelines** to benchmark model performance across domain-specific reasoning tasks.
- Designed **feature-rich datasets and task formulations** to surface failure modes in reasoning and decision-making.
- Conducted **ablation studies** to isolate the impact of prompt structure, tool access, and agent memory strategies.
- Worked with cross-functional teams to align research metrics with real-world task success criteria.
- Improved experiment velocity by building reusable scripts and standardized evaluation templates.

Arvam Tech (*Jul 2023 – Jan 2025)*

Machine Learning Engineer (Experimentation & Infrastructure)

- Built **ML experimentation pipelines** supporting iterative model training, validation, and comparison.
- Developed tooling to automate **dataset preprocessing, feature generation, and experiment tracking**.
- Supported deployment-adjacent evaluation workflows to test model robustness before release.
- Partnered with engineers to ensure experimental results were reproducible and actionable.
- Balanced research exploration with engineering rigor to maintain reliable systems under change.

RHYM Tech (*Aug 2022 – May 2023)*

ML Engineer (Analytics & Modeling Foundations)

- Implemented analytical and ML workflows to explore behavioral and event-driven datasets.
- Performed **exploratory data analysis and statistical validation** to inform modeling decisions.
- Assisted in designing early evaluation metrics to measure model effectiveness.
- Contributed to cross-functional discussions on data quality and experiment design.

ZeMoSo Technologies (*Jul 2021 – Aug 2022)*

Associate Engineer (ML & Data Systems)

- Supported ML initiatives through **data preparation, feature extraction, and baseline modeling**.
- Assisted in building scripts for training and evaluating early ML prototypes.
- Gained foundational experience in **end-to-end ML workflows and engineering best practices**.

Education

Master's in Computer Science — Oklahoma State University
Bachelor's in Computer Science — JNTU Hyderabad
