Lohit Gali

Data Engineer

lohitgali@gmail.com | +1(475)-291-1455 | Stillwater, OK

PROFESSIONAL SUMMARY

Data Engineer with 3+ years of experience designing, building, and launching robust data models and ETL processes. Proven expertise in developing custom-built ETL frameworks and automated alert systems, leveraging Python, SQL, and AWS. Skilled in managing AWS cloud accounts with Terraform scripts, ensuring infrastructure as code best practices, and collaborating with marketing teams to deliver accurate, relevant datasets.

TECHNICAL SKILLS

Data Engineering & ETL: Data Extraction, Data Transformation, Data Loading, Custom ETL Framework Design, Schema Design, Dimensional Data Modeling, Hive, Salesforce Data Cloud, SQL, Data Modeling, Automated Alert Systems, Data Analysis, Efficient Queries, Optimized Solutions

Programming Languages: Python, Java, Bash, PowerShell

Cloud & DevOps: AWS, Terraform, Docker, Kubernetes, CI/CD, Infrastructure as Code (IaC), GitHub Actions, Azure DevOps

Databases & Analytics: MySQL, PostgreSQL, MongoDB, DynamoDB, Apache Kafka, Data Accuracy, Data Relevance

PROFESSIONAL EXPERIENCE

Data Engineer | Epik Solutions

Jun 2025 - Present

• Designed, built, and launched new data models in production using Python to ingest and analyze high-volume telemetry and cybersecurity datasets, providing critical insights for internal security teams.

• Collaborated with security and analytics stakeholders to define and manage SLA for data sets, translating operational requirements into robust data extraction, transformation, and loading processes for optimal data accuracy and relevance.

• Engineered and optimized data pipelines for sensor and operational data using Python, focusing on efficient queries and data transformation to prepare datasets for advanced analytics and reporting.

• Implemented robust data cleaning, transformation, and feature extraction processes, improving data quality by 30% and ensuring reliable inputs for downstream data models.

• Developed automated alert systems using a custom-built alerting framework to detect errors and exceptions in real-time across security telemetry, enhancing data integrity and operational responsiveness.

• Built automation scripts using Bash and PowerShell for CLI-based deployments and monitoring, streamlining operational processes and reducing manual effort by 25% for data pipeline management.

• Supported AWS cloud-based production deployments by validating data model behavior and monitoring early usage signals, ensuring data accuracy and system stability post-release.

Data Engineer | Samay Systems LLC

July 2024 - Jun 2025

• Designed and built new data models and ETL processes tailored for compliance, audits, and risk analysis use cases, enhancing the efficiency of data-driven decision-making by 20%.

• Developed Python services for data extraction, transformation, and loading processes, collecting and validating evidence data from AWS, Azure, and various APIs to create consistent inputs for enterprise data models.

• Implemented a custom-built ETL framework to integrate diverse structured enterprise data sources, facilitating advanced data analysis and reducing data preparation time by 15%.

• Designed and implemented efficient SQL workflows for querying historical compliance data, ensuring data accuracy and relevance for analytical reporting and audit purposes.

• Executed schema design and dimensional data modeling for complex relational databases, supporting multi-tenant compliance validation and scaling data infrastructure to accommodate 200% growth.

• Managed and maintained AWS cloud accounts using Terraform scripts, ensuring infrastructure as code (IaC) best practices and least access principle for secure and reliable production deployments.

Data Engineering Intern | Monarch Tractor

Jun 2023 - Aug 2023

• Supported the development of data pipelines for semi-autonomous agricultural vehicles, focusing on data extraction and transformation for real-time sensor and image data.

• Developed Python-based preprocessing pipelines to transform raw sensor and image data into clean, training-ready datasets, improving data quality for downstream data models.

• Performed data analysis on generated datasets to identify deliverables, gaps, and inconsistencies, ensuring high data accuracy for critical perception and prediction systems.

• Assisted in designing, building, and launching new data models by testing data integrity and pipeline performance using CLI-driven workflows, ensuring data relevance for operational systems.

• Collaborated with engineering teams to refine requirements for data extraction, transformation, and loading processes, ensuring alignment with field expectations for data accuracy in production environments.

• Supported cloud-hosted production deployments, gaining experience in managing and maintaining AWS cloud accounts and monitoring data pipeline performance for optimal efficiency.

Associate Data Engineer | ZeMoSo Technologies

Jul 2021 - Aug 2022

• Contributed to a cloud-based scientific operations platform by developing robust data extraction, transformation, and loading processes for experiment, sample, and analysis data.

• Built Python-based backend services and data pipelines that validated, enriched, and structured experimental data, enabling reliable downstream data models and informed decision-making.

• Automated dataset preparation and feature generation processes, significantly reducing manual effort and ensuring data accuracy and relevance for Proof-of-Concept data models.

• Integrated CI/CD pipelines to validate data models and enforce quality checks, promoting artifacts while maintaining auditability and security controls aligned with infrastructure as code best practices.

EDUCATION

Master’s in Computer Science | Oklahoma State University, Stillwater, OK

Bachelor’s in Computer Science | JNTU Hyderabad, India
