Lohit Gali

Data Engineer
lohitgali.tech@gmail.com | +1(475)-291-1455

Summary

- Data Engineer with 5+ years of experience designing and productionizing scalable data platforms on Azure.
- Deep expertise in Azure Databricks, PySpark, Delta Lake, and ADLS Gen2, with a strong track record of building governed, high-reliability ETL/ELT pipelines for batch and streaming workloads.
- Proven ability to translate complex business and scientific workflows into optimized data models, enforce data governance with Unity Catalog, and deliver SLA-driven pipelines through CI/CD and monitoring-first design

Skills

Data Engineering: Azure Databricks, PySpark, Spark SQL, Delta Lake, Delta Live Tables
Data Storage: Azure Data Lake Storage Gen2, Delta Tables, Parquet
Pipelines & Orchestration: Databricks Workflows, Azure Data Factory, Event-driven ingestion
APIs & Ingestion: REST APIs, incremental loads, CDC-like patterns, schema evolution
Governance & Security: Unity Catalog, RBAC, data lineage, data quality checks
DevOps & CI/CD: Azure DevOps, Git, automated deployment pipelines
Monitoring & Reliability: Pipeline metrics, alerts, SLA enforcement
Languages: Python, SQL

Professional Experience

CIFC Asset Management *Jun 2025 – Present*
Senior Automation Engineer (Enterprise Security & Reporting)
Project: CIFC Enterprise Automation & KPI Reporting Modernization

- Designed and implemented Azure Databricks data pipelines using PySpark and Delta Lake to ingest, normalize, and store security and operational datasets, enabling scalable analytics beyond source-system retention limits.
- Built robust ETL/ELT frameworks supporting both batch and near-real-time ingestion, ensuring consistent schema enforcement and optimized query performance for downstream analytics.
- Integrated RESTful SaaS APIs (with and without native CDC) by implementing incremental extraction logic, watermarking, and idempotent writes to Delta tables.
- Implemented data governance and access controls using Unity Catalog, enforcing role-based access, table-level permissions, and end-to-end lineage tracking.
- Optimized Spark workloads through partitioning strategies, file compaction, caching, and query tuning, reducing job runtimes and improving SLA adherence.
- Productionized pipelines with Databricks Workflows, adding monitoring, failure handling, and alerting to ensure reliable daily operations.
- Collaborated with business and engineering stakeholders to convert reporting and investigation workflows into scalable analytical data models.

Samay Systems LLC *Feb 2025 – Jun 2025*
Senior Automation Engineer (Cloud & Compliance)
Project: Compliance Platform (SaaS) – Security & Compliance Automation

- Architected Azure Databricks-based ELT pipelines to support a compliance SaaS platform, transforming raw cloud and application data into governed analytical datasets.

- Developed PySpark ingestion jobs to pull structured and semi-structured data from REST APIs, handling pagination, rate limits, schema drift, and data validation.
- Designed Delta Lake table schemas optimized for analytical queries, supporting time-based filtering, auditability, and historical analysis.
- Implemented data quality checks and validation rules at ingestion and transformation stages to prevent downstream data integrity issues.
- Integrated pipelines into Azure DevOps CI/CD workflows, enabling version-controlled deployments and repeatable environment promotion.
- Worked closely with customers and internal teams to translate audit and compliance workflows into scalable data models and reporting layers.

Arvam Tech *Jul 2023 – Jan 2025*
Enterprise Automation Engineer
Project: Enterprise Asset Management System

- Built batch ETL pipelines to consolidate enterprise asset and inventory data into a centralized Azure data lake for long-term analytics.
- Developed Python and Spark SQL transformations to standardize schemas, enforce referential integrity, and support cross-system reporting.
- Implemented incremental load strategies for API-based sources lacking CDC, minimizing data movement and processing cost.
- Designed monitoring and alerting mechanisms to track pipeline health, failures, and data freshness.
- Partnered with stakeholders to evolve data models as business requirements changed, maintaining backward compatibility.

RHYM Tech *Aug 2022 – May 2023*
Associate solutions Engineer
Project: Cybersecurity Threat Intelligence Platform

- Developed PySpark pipelines to ingest and transform high-volume security and telemetry data into analytical storage.
- Built optimized Delta Lake tables to support trend analysis and historical investigations.
- Tuned Spark jobs by optimizing joins, partitions, and file sizes to improve reliability and runtime performance.
- Supported schema design and evolution to accommodate new data sources without breaking downstream consumers.

ZeMoSo Technologies *Jul 2021 – Aug 2022*
Associate Developer
Project: Biotech LabOps Automation

- Implemented data ingestion and transformation logic using Python and SQL to support laboratory and scientific workflows.
- Designed structured data models aligned with experiment and operational reporting needs.
- Assisted in productionizing pipelines with basic monitoring, logging, and error handling patterns.

Projects

CIFC Platform
Problem: Fragmented systems and short data retention windows limited analytics and trend analysis.
Solution: Built governed Azure Databricks pipelines using PySpark, Delta Lake, and Unity Catalog to centralize, secure, and scale analytical data with SLA-driven reliability.
Agent-based Compliance Dashboard – RHYM Tech
Problem: Manual audit preparation and inconsistent data ingestion slowed customer workflows.

Solution: Implemented API-driven ELT pipelines with Delta Lake and automated quality checks to deliver reliable, self-service analytics.
Enterprise Asset Management Automation – Arvam Tech
Problem: Manual asset tracking was inefficient.
Solution: Automated data flows with PowerShell + Express.js, integrated Power BI, and used Power Automate for approval chains.

Education

Master's in Computer Science, Oklahoma State University, Stillwater, OK *May 2024*
Bachelor's in Computer Science, JNTU Hyderabad, India *Jun 2021*
