Neel Gali

Backend Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Professional Experience

Senior Software Engineer *Jul 2025 – Present*

Epik Solutions | Generative AI Music Platform

- Designed scalable **backend systems** utilizing **Java** and **Spring Boot** for an **AI Music lab**, enabling **generative AI** features, enhancing **performance** by 30%.
- Led development of **APIs** using **GraphQL** for **AI creation flows**, integrating **OpenAI API** to support diverse **artist-first** music experiences, boosting user engagement 25%.
- Architected **microservices architecture** on **AWS** with **Kubernetes** to manage **content consumption** at scale, improving system **reliability** for 10M daily users.
- Implemented **real-time data pipelines** with **Apache Kafka** and **Spark** to capture **reporting** metrics, optimizing **performance** for **new revenue streams** analysis by 40%.
- Spearheaded migration of legacy services to modern **service-based architectures** using **Java** and **gRPC**, reducing operational costs by 15% across key **backend systems**.
- Contributed to **architecture** evolution by introducing **LangChain** for advanced **generative AI** prompt engineering, streamlining development workflows for 5+ engineering teams.
- Performed **code reviews** and mentored junior engineers on **clean, maintainable code** practices for **backend systems**, increasing team productivity by 20%.

Software Engineer *Jul 2022 – Jun 2025*

Samay Systems LLC | Enterprise SaaS & AI Integration

- Developed **backend systems** in **Java** and **Spring Boot** for a **SaaS** platform, supporting **API** integrations with external partners, improving data exchange latency by 20%.
- Engineered **RESTful APIs** using **Spring WebFlux** to power **content consumption** for enterprise clients, achieving 99.9% **system reliability** for critical operations.
- Utilized **Python** and **OpenAI API** for **generative AI** text summarization within a data product, enhancing user productivity by 15% for report generation.
- Optimized **database performance** for large-scale **PostgreSQL** instances, leading to a 25% reduction in query times across complex **reporting** dashboards.
- Implemented **CI/CD pipelines** using **Jenkins** and **Docker** for **backend systems**, automating deployments and reducing release cycle time by 30%.
- Collaborated on designing **service-based architectures** for new modules, ensuring **scalability** and maintainability for future feature expansions, supporting 50K users.
- Wrote **clean, maintainable code** and comprehensive unit/integration tests for **Java** applications, contributing to a 10% reduction in production bugs.
- Monitored **production systems** using **Prometheus** and **Grafana**, proactively identifying and resolving **performance** bottlenecks, minimizing downtime by 15%.

Software Engineer *Jul 2020 – Aug 2022*

Zemoso Technologies | B2B Digital Transformation Services

- Developed **backend systems** using **Java** and **Spring Boot** for **B2B** digital solutions, processing high volumes of transactional data with 99.8% uptime.
- Designed and implemented **RESTful APIs** for client-facing applications, enabling seamless integration with third-party services, increasing data throughput by 20%.
- Optimized **SQL** queries and **PostgreSQL** schemas for improved **database performance**, reducing average response times for critical services by 30%.
- Contributed to building **microservices architecture** components using **Java**, enhancing **scalability** and maintainability for a growing user base of 10K.
- Participated in **code reviews** and advocated for **clean, maintainable code** standards, improving overall code quality and reducing technical debt by 15%.
- Deployed and managed **backend systems** on **AWS EC2** instances, ensuring **system reliability** and security compliance for sensitive customer data.

Skills

Languages: Java, Python, SQL
Frameworks & Tools: OpenAI API, LangChain, Spring Boot, GraphQL, gRPC, Apache Kafka, Spark, LangChain, Spring WebFlux, Jenkins, Docker, Prometheus, Grafana, Kubernetes
Cloud & Infra: AWS, AWS EC2, PostgreSQL
Concepts: backend systems, generative AI, APIs, microservices architecture, reliability, real-time data pipelines, reporting, service-based architectures, code reviews, clean, maintainable code, RESTful APIs, system reliability

Education

Master's in Computer Science, Oklahoma State University, Stillwater
Bachelor's in Computer Science, JNTU Hyderabad, India
