Neel Gali

FullStack AI Engineer

neelgali7@gmail.com | +1(475)-291-1455 | Austin, TX

Summary

- Software Engineer with 3+ years of proven ability contributing to the **entire feature lifecycle** in **cybersecurity, compliance workflows and autonomous vehicles**
- Experienced in developing and maintaining robust **backend services**, and **user interfaces using Python, React, and TypeScript in** cloud-native infrastructures
- Strong background in **LLM-powered agents**, **AI-assisted analysis workflows**, data processing and security controls across **AWS, Azure, and enterprise environments**
- Proven ability to transition proof-of-concepts into governed, **production-ready workflows** using real-time inference pipelines and **cloud-native infrastructure**
- Hands-on experience with **SQL/NOSQL Databases, CI/CD, cloud infrastructure**, **DevOps tooling, and applied ML** in large scale production environments.

Skills

Languages & Libraries: Python, SQL, TensorFlow, OpenCV, PyTorch, YOLOv8, Detectron2 (Mask R-CNN), scikit-learn, TypeScript, JavaScript
Full Stack Development: Node.js, React, Express.js, RESTful APIs, Microservices, Frontend Development, Backend Services
Machine Learning: supervised & unsupervised learning, classification, regression, clustering, model validation, Image Augmentation.
AI & Agentic Systems: LLMs (OpenAI, Anthropic), Frameworks (LangChain, LlamaIndex, Hugging Face, BedRock), Prompt Engineering, Tool-Calling Agents, RAG, Vector Search
Analytics & Statistics: exploratory data analysis, hypothesis testing, feature engineering, statistical modeling
Databases & Data Management: SQL (MySQL, PostgreSQL), NoSQL (MongoDB, DynamoDB)
Scripting & Automation: PowerShell, Python, Bash, Power Automate
Cloud Platforms & Services: AWS, Azure, GCP (Cloud Functions)
CI/CD & DevOps: Jenkins, GitHub Actions, Azure DevOps, Docker, Kubernetes, Terraform, Apache Kafka

Professional Experience

Epik Solutions *Jun 2025 – Present*
Automation Engineer
Cybersecurity & Threat Intelligence

- Led development of **AI-powered business process automation** solutions using **Python** and **TypeScript** to integrate with **cybersecurity platforms** for security analysts, improved threat detection accuracy by 30% and reduced manual incident response time by 25%
- Developed **ML models** using **Python** for **anomaly detection**, **forecasting**, and **pattern discovery across cybersecurity datasets** used by internal security teams in production workflows.
- **Translated business and operational requirements** into model objectives, evaluation metrics, and deployment strategies by working closely with **security, and analytics stakeholders**
- Architected and implemented **full stack custom workflow automation tools**, leveraging **React**, **Azure** cloud-native services and microservices architecture;
- Developed **automated KPI and performance dashboards** aligned with executive and

investment-risk stakeholders, transforming raw datasets into decision-ready insights.

- Applied **LLM-assisted analysis pipelines** to accelerate exploratory data analysis and summarization across security datasets while preserving deterministic outputs for compliance.
- Supported **cloud-based production deployments** by validating application behavior, monitoring early usage signals and addressing issues discovered after release

Samay Systems LLC *July 2024 – Jun 2025*
Fullstack AI Engineer
Cloud & Compliance

- Design and Built **compliance dashboards**, control validation views, and AI-assisted insights modules.
- Built **modular backend** services supporting **multi-tenant compliance validation** across multiple frameworks (SOC 2, ISO, etc.), enforcing strict **tenant isolation** at the schema and query layer.
- Built **Python services** that collect, validate, and summarize evidence data from **AWS, Azure, GitHub, and Jira and several other MCP-enabled APIs**, creating consistent inputs for downstream ML workflows
- Built **AI-assisted compliance workflows** combining LLM reasoning with structured enterprise data using **MCP-based tool calling and n8n-orchestrated agents**
- Implemented **RAG-style querying** over **historical compliance data** using **vector databases**, allowing customers to ask **natural-language questions** and receive contextual answers.
- Designed **complex relational schemas and SQL workflows** to support **multi-tenant**, multi-framework **compliance validation** at scale.
- **Deployed** services using **AWS cloud-native infrastructure, Docker, Kubernetes, and CI/CD pipelines**, ensuring reliability across multiple **production environments**

Monarch Tractor *Jun 2023 – Aug 2023*
SDE Intern
Autonomous Vehicles

- Supported development of **computer-vision and ML pipelines** for **semi-autonomous agricultural vehicles** operating in **real-world environments**.
- Built **Python-based** preprocessing pipelines to **transform raw sensor and image data** into training-ready datasets for **detection and prediction tasks**.
- Built **object detection and segmentation models** using **PyTorch, TensorFlow, and OpenCV** to support **perception** and prediction use cases, validating outputs against operational constraints for autonomous and **transport-related systems**.
- Implemented **UI enhancements** and **backend integrations** to improve usability and reliability of **internal tools**
- Deployed models to **cloud-hosted production environments**, gaining hands-on experience with **performance monitoring** and **inference validation**.

ZeMoSo Technologies *Jul 2021 – Aug 2022*
Associate Software Engineer
LabOps Automation

- Contributed to a **cloud-based scientific operations platform** designed to trace experiments, samples, and data from project inception to analysis.
- Collaborated with **scientists and operators** to translate domain-specific workflows into structured **backend APIs** and intuitive **UI components**.
- Designed and implemented database migration files to create and manage **batch tables**, ensuring schema consistency across environments.
- Supported **Proof-of-Concept ML experimentation workflows** by automating dataset preparation, feature generation, and **experiment tracking**.
- Integrated **CI/CD pipelines** to validate models, enforce quality checks, and promote artifacts while

maintaining auditability and security controls aligned with governance standards.

Education

Master's in Computer Science, Oklahoma State University, Stillwater, OK
Bachelor's in Computer Science, JNTU Hyderabad, India
